Wind River LinuxSecurity Bulletin - 2020-04-10

Wind River has analyzed the following security alerts and determined the status to be as shown for each with respect to Wind River Linux. Visit *http://cve.mitre.org/* for more information on these security alerts. For issues still under investigation, if it is determined a vulnerability exists, a patch will be made available and notification sent via Wind River Online Support (OLS). Visit *http://www.windriver.com/support/* and click on the link to "Access Online Support" to download a patch.

Index:

Table A: All CVEs Modified or Added this Report
Table B: All Analyzed CVEs Affecting or Potentially Affecting WRLinux
Table C: All Analyzed CVEs

8.0.0.28 release; Not vulnerable = eatch releases are:

WRLinux 8.0.0.30
WRLinux 9.0.0.21
WRLinux LTS 17 10.17.41.16
WRLinux LTS 18

Table A: All CVEs Modified or Added this Report

CVE Number	Priority	CVSSv3_Severity	CVE Description	WR Comments	Modifications	Status WRLinux 8.0.0	Status WRLinux 9.0.0	Status WRLinux LTS 17	Status WRLinux LTS 18	Status WRLinux LTS 19	Status WRLinux CD release	Defect
CVE-2020-9383	LOW	HIGH	An issue was discovered in the Linux kernel through 5.5.6. set_fdc in drivers/block/floppy.c leads to a wait_til_ready out-of-bounds read because the FDC index is not checked for errors before assigning it, aka CID-2e90ca68b0d2.	linux	Updated	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.7	Not vulnerable	LIN1019-4079
CVE-2020-8835	HIGH	HIGH	In the Linux kernel 5.5.0 and newer, the bpf verifier (kernel/bpf/verifier.c) did not properly restrict the register bounds for 32-bit operations, leading to out-of-bounds reads and writes in kernel memory. The vulnerability also affects the Linux 5.4 stable series, starting with v5.4.7, as the introducing commit was backported to that branch. This vulnerability was fixed in 5.6.1, 5.5.14, and 5.4.29. (issue is aka ZDI-CAN-10780)	linux	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Vulnerable	Not vulnerable	LIN1019-4231
CVE-2020-8834			KVM in the Linux kernel on Power8 processors has a conflicting use of HSTATE_HOST_R1 to store r1 state in kvmppc_hv_entry plus in kvmppc_{save,restore}_tm, leading to a stack corruption. Because of this, an attacker with the ability run code in kernel space of a guest VM can cause the host kernel to panic. There were two commits that, according to the reporter, introduced the vulnerability: f024ee098476 (KVM: PPC: Book3S HV: Pull out TM state save/restore into separate procedures) 87a11bb6a7f7 (KVM: PPC: Book3S HV: Work around XER[SO] bug in fake suspend mode) The former landed in 4.8, the latter in 4.17. This was fixed without realizing the impact in 4.18 with the following three commits, though it's believed the first is the only strictly necessary commit: 6f597c6b63b6 (KVM: PPC: Book3S PR: Add guest MSR parameter for kvmppc_save_tm()/kvmppc_restore_tm()) 7b0e827c6970 (KVM: PPC: Book3S HV: Factor fake-suspend handling out of kvmppc_save/restore_tm) 009c872a8bc4 (KVM: PPC: Book3S PR: Move kvmppc_save_tm/kvmppc_restore_tm to separate file)	linux	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4268
CVE-2020-8832			The fix for the Linux kernel in Ubuntu 18.04 LTS for CVE-2019-14615 (The Linux kernel did not properly clear data structures on context switches for certain Intel graphics processors.) was discovered to be incomplete, meaning that in versions of the kernel before 4.15.0-91.92, an attacker could use this vulnerability to expose sensitive information.	linux	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4270
CVE-2020-8649	LOW	HIGH	There is a use-after-free vulnerability in the Linux kernel through 5.5.2 in the vgacon_invert_region function in drivers/video/console/vgacon.c.	linux	Updated	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.16	10.19.45.7	Investigate	LIN1019-4010
CVE-2020-8648	LOW	HIGH	There is a use-after-free vulnerability in the Linux kernel through 5.5.2 in the n_tty_receive_buf_common function in drivers/tty/n_tty.c.	linux	Updated	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.7	Investigate	LIN1019-4011
CVE-2020-8552	MEDIUM	HIGH	The Kubernetes API server component in versions prior to 1.15.9, 1.16.0-1.16.6, and 1.17.0-1.17.2 has been found to be vulnerable to a denial of service attack via successful API requests.	kubernetes	Updated	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Investigate	Investigate	LIN1019-4189
CVE-2020-8551	LOW	MEDIUM	The Kubelet component in versions 1.15.0-1.15.9, 1.16.0-1.16.6, and 1.17.0-1.17.2 has been found to be vulnerable to a denial of service attack via the kubelet API, including the unauthenticated HTTP read-only API typically served on port 10255, and the authenticated HTTPS API typically served on port 10250.	kubernetes	Updated	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Investigate	Investigate	LIN1019-4190
CVE-2020-8428	LOW	HIGH	fs/namei.c in the Linux kernel before 5.5 has a may_create_in_sticky use-after-free, which allows local users to cause a denial of service (OOPS) or possibly obtain sensitive information from kernel memory, aka CID-d0cb50185ae9. One attack vector may be an open system call for a UNIX domain socket, if the socket is being moved to a new parent directory and its old parent directory is being removed.	linux	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.7	Not vulnerable	LIN1019-3978
CVE-2020-7066	MEDIUM	MEDIUM	In PHP versions 7.2.x below 7.2.9, 7.3.x below 7.3.16 and 7.4.x below 7.4.34, while using get_headers() with user-supplied URL, if the URL contains zero (\0) character, the URL will be silently truncated at it. This may cause some software to make incorrect assumptions about the target of the get_headers() and possibly send some information to a wrong server.	php	Updated	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.16	10.19.45.7	Investigate	LIN1019-4208
CVE-2020-7065	MEDIUM	HIGH	In PHP versions 7.3.x below 7.3.16 and 7.4.x below 7.4.34, while using mb_strtolower() function with UTF-32LE encoding, certain invalid strings could cause PHP to overwrite stack-allocated buffer. This could lead to memory corruption, crashes and potentially code execution.	php	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.7	Investigate	LIN1019-4209
CVE-2020-7064	MEDIUM	MEDIUM	In PHP versions 7.2.x below 7.2.9, 7.3.x below 7.3.16 and 7.4.x below 7.4.34, while parsing EXIF data with exif_read_data() function, it is possible for malicious data to cause PHP to read one byte of uninitialized memory. This could potentially lead to information disclosure or crash.	php	Updated	8.0.0.33	9.0.0.25	10.17.41.21	10.18.44.16	10.19.45.7	Investigate	LIN1019-4210

	A	B	C	D	E	F	G	H	I	J	K	L	M
25	CVE-2020-6096	HIGH	CRITICAL	An exploitable signed comparison vulnerability exists in the ARMv7 memcpy() implementation of GNU glibc 2.30.9000. Calling memcpy() (on ARMv7 targets that utilize the GNU glibc implementation) with a negative value for the 'num' parameter results in a signed comparison vulnerability. If an attacker underflows the 'num' parameter to memcpy(), this vulnerability could lead to undefined behavior such as writing to out-of-bounds memory and potentially remote code execution. Furthermore, this memcpy() implementation allows for program execution to continue in scenarios where a segmentation fault or crash should have occurred. The dangers occur in that subsequent execution and iterations of this code will be executed with this corrupted data.	glibc	Updated	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4216
26	CVE-2020-5504	MEDIUM	HIGH	In phpMyAdmin 4 before 4.9.4 and 5 before 5.0.1, SQL injection exists in the user accounts page. A malicious user could inject custom SQL in place of their own username when creating queries to this page. An attacker must have a valid MySQL account to access the server.	phpmyadmin	Updated	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.14	10.19.45.4	Not vulnerable	LIN1019-3909
27	CVE-2020-1934	HIGH	CRITICAL	In Apache HTTP Server 2.4.0 to 2.4.41, mod_proxy_ftp may use uninitialized memory when proxying to a malicious FTP server.	apache2	Updated	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4217
28	CVE-2020-1747	HIGH	CRITICAL	A vulnerability was discovered in the PyYAML library in versions before 5.3.1, where it is susceptible to arbitrary code execution when it processes untrusted YAML files through the full_load method or with the FullLoader loader. Applications that use the library to process untrusted input may be vulnerable to this flaw. An attacker could use this flaw to execute arbitrary code on the system by abusing the python/object/new constructor.	python-pyyaml	Updated	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4178
29	CVE-2020-1712			A heap use-after-free vulnerability was found in systemd before version v245-rc1, where asynchronous Polkit queries are performed while handling dbus messages. A local unprivileged attacker can abuse this flaw to crash systemd services or potentially execute code and elevate their privileges, by sending specially crafted dbus messages.	systemd	Updated	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Investigate	LIN1019-4212
30	CVE-2020-11668			In the Linux kernel before 5.6.1, drivers/media/usb/gspca/xirlink_cit.c (aka the Xirlink camera USB driver) mishandles invalid descriptors, aka CID-a246b4d54770.	linux	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4269
31	CVE-2020-11656			In SQLite through 3.31.1, the ALTER TABLE implementation has a use-after-free, as demonstrated by an ORDER BY clause that belongs to a compound SELECT statement.	sqlite3	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4261
32	CVE-2020-11655			SQLite through 3.31.1 allows attackers to cause a denial of service (segmentation fault) via a malformed window-function query because the AggInfo object's initialization is mishandled.	sqlite3	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4262
33	CVE-2020-11609	MEDIUM	MEDIUM	An issue was discovered in the stv06xx subsystem in the Linux kernel before 5.6.1. drivers/media/usb/gspca/stv06xx/stv06xx.c and drivers/media/usb/gspca/stv06xx/stv06xx_pb0100.c mishandle invalid descriptors, as demonstrated by a NULL pointer dereference, aka CID-48fe96eadb93.	linux	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4253
34	CVE-2020-11608	LOW	MEDIUM	An issue was discovered in the Linux kernel before 5.6.1. drivers/media/usb/gspca/ov519.c allows NULL pointer dereferences in ov511_mode_init_regs and ov518_mode_init_regs when there are zero endpoints, aka CID-998912346c0d.	linux	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4254
35	CVE-2020-11565	MEDIUM	HIGH	An issue was discovered in the Linux kernel through 5.6.2. mpol_parse_str in mm/mempolicy.c has a stack-based out-of-bounds write because an empty nodelist is mishandled during mount option parsing, aka CID-aa9f7d5172fa.	linux	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4245
36	CVE-2020-11501	MEDIUM	CRITICAL	GnuTLS 3.6.x before 3.6.13 uses incorrect cryptography for DTLS. The earliest affected version is 3.6.3 (2018-07-16) because of an error in a 2017-10-06 commit. The DTLS client always uses 32 '\0' bytes instead of a random value, and thus contributes no randomness to a DTLS negotiation. This breaks the security guarantees of the DTLS protocol.	gnutls	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4237
37	CVE-2020-11494	LOW	MEDIUM	An issue was discovered in slc_bump in drivers/net/can/slcan.c in the Linux kernel through 5.6.2. It allows attackers to read uninitialized can_frame data, potentially containing sensitive information from kernel stack memory, if the configuration lacks CONFIG_INIT_STACK_ALL, aka CID-b9258a2cece4.	linux	Updated	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Investigate	LIN1019-4230
38	CVE-2020-11102	HIGH	CRITICAL	hw/net/tulip.c in QEMU 4.2.0 has a buffer overflow during the copying of tx/rx buffers because the frame size is not validated against the r/w data length.	qemu	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4249
39	CVE-2020-10942	MEDIUM	MEDIUM	In the Linux kernel before 5.5.8, get_raw_socket in drivers/vhost/net.c lacks validation of an sk_family field, which might allow attackers to trigger kernel stack corruption via crafted system calls.	linux	Updated	8.0.0.33	9.0.0.25	Investigate	10.18.44.16	Investigate	10.20.15.0	LIN1019-4176
40	CVE-2020-10941	MEDIUM	MEDIUM	Arm Mbed TLS before 2.6.15 allows attackers to obtain sensitive information (an RSA private key) by measuring cache usage during an import.	mbedtls	Updated	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4177
41	CVE-2020-10804	MEDIUM	HIGH	In phpMyAdmin 4.x before 4.9.5 and 5.x before 5.0.2, a SQL injection vulnerability was found in retrieval of the current username (in libraries/classes/Server/Privileges.php and libraries/classes/UserPassword.php). A malicious user with access to the server could create a crafted username, and then trick the victim into performing specific actions with that user account (such as editing its privileges).	phpmyadmin	Updated	Investigate	Investigate	Investigate	10.18.44.16	10.19.45.6	Not vulnerable	LIN1019-4157
42	CVE-2020-10803	LOW	MEDIUM	In phpMyAdmin 4.x before 4.9.5 and 5.x before 5.0.2, a SQL injection vulnerability was discovered where malicious code could be used to trigger an XSS attack through retrieving and displaying results (in tbl_get_field.php and libraries/classes/Display/Results.php). The attacker must be able to insert crafted data into certain database tables, which when retrieved (for instance, through the Browse tab) can trigger the XSS attack.	phpmyadmin	Updated	Investigate	Investigate	Investigate	10.18.44.16	10.19.45.6	Not vulnerable	LIN1019-4164

	A	B	C	D	E	F	G	H	I	J	K	L	M
43	CVE-2020-10802	MEDIUM	HIGH	In phpMyAdmin 4.x before 4.9.5 and 5.x before 5.0.2, a SQL injection vulnerability has been discovered where certain parameters are not properly escaped when generating certain queries for search actions in libraries/classes/Controllers/Table/TableSearchController.php. An attacker can generate a crafted database or table name. The attack can be performed if a user attempts certain search operations on the malicious database or table.	phpmyadmin	Updated	Investigate	Investigate	Investigate	10.18.44.16	10.19.45.6	Not vulnerable	LIN1019-4165
44	CVE-2020-10593	MEDIUM	HIGH	Tor before 0.3.5.10, 0.4.x before 0.4.1.9, and 0.4.2.x before 0.4.2.7 allows remote attackers to cause a Denial of Service (memory leak), aka TROVE-2020-004. This occurs in circpad_setup_machine_on_circ because a circuit-padding machine can be negotiated twice on the same circuit.	tor	Updated	Not vulnerable	Not vulnerable	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-7115
45	CVE-2020-10592	MEDIUM	HIGH	Tor before 0.3.5.10, 0.4.x before 0.4.1.9, and 0.4.2.x before 0.4.2.7 allows remote attackers to cause a Denial of Service (CPU consumption), aka TROVE-2020-002.	tor	Updated	Not vulnerable	Not vulnerable	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-7114
46	CVE-2019-9924	HIGH	HIGH	rbash in Bash before 4.4-beta2 did not prevent the shell user from modifying BASH_CMDS, thus allowing the user to execute any command with the permissions of the shell.	bash	Updated	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3770
47	CVE-2019-20636	HIGH	CRITICAL	In the Linux kernel before 5.4.12, drivers/input/input.c has out-of-bounds writes via a crafted keycode table, as demonstrated by input_set_keycode, aka CID-cb222aed03d7.	linux	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4263
48	CVE-2019-20054	MEDIUM	MEDIUM	In the Linux kernel before 5.0.6, there is a NULL pointer dereference in drop_sysctl_table() in fs/proc/proc_sysctl.c, related to put_links, aka CID-23da9588037e.	linux	Updated	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	Not vulnerable	Not vulnerable	LIN1019-3872
49	CVE-2019-19769	MEDIUM	HIGH	In the Linux kernel 5.3.10, there is a use-after-free (read) in the perf_trace_lock_acquire function (related to include/trace/events/lock.h).	linux	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.7	Not vulnerable	LIN1019-3775
50	CVE-2019-18860	MEDIUM	MEDIUM	Squid before 4.9, when certain web browsers are used, mishandles HTML in the host (aka hostname) parameter to cachemgr.cgi.	squid	Updated	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4158
51	CVE-2019-15167			Tcpdump is vulnerable to a buffer overflow, caused by improper bounds checking by the lmp_print_data_link_subobjs function in print-lmp.c. By sending specially-crafted data, a remote attacker could overflow a buffer and cause the application to crash.	tcpdump	Updated	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	Not vulnerable	Not vulnerable	LIN1019-4137
52	CVE-2019-14615	LOW	MEDIUM	Insufficient control flow in certain data structures for some Intel(R) Processors with Intel(R) Processor Graphics may allow an unauthenticated user to potentially enable information disclosure via local access.	linux	Updated	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4267
53	CVE-2019-13627	Medium	HIGH	It was discovered that there was a ECDSA timing attack in the libgcrypt20 cryptographic library. Version affected: 1.8.4-5, 1.7.6-2+deb9u3, and 1.6.3-2+deb8u4. Versions fixed: 1.8.5-2 and 1.6.3-2+deb8u7.	libgcrypt	Updated	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	10.19.45.6	10.20.15.0	LIN1018-5046
54	CVE-2019-11254	MEDIUM	MEDIUM	The Kubernetes API Server component in versions 1.1-1.14, and versions prior to 1.15.10, 1.16.7 and 1.17.3 allows an authorized user who sends malicious YAML payloads to cause the kube-apiserver to consume excessive CPU cycles while parsing YAML.	kubernetes	Updated	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Investigate	Investigate	LIN1019-4220
55	CVE-2019-11251	MEDIUM	MEDIUM	The Kubernetes kubectl cp command in versions 1.1-1.12, and versions prior to 1.13.11, 1.14.7, and 1.15.4 allows a combination of two symlinks provided by tar output a malicious container to place a file outside of the destination directory specified in the kubectl cp invocation. This could be used to allow an attacker to place a nefarious file using a symlink, outside of the destination tree.	kubernetes	Updated	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	10.19.45.5	10.20.15.0	LIN1019-4047
56	CVE-2018-8086			The basename implementation in string/basename.c in the GNU C Library (aka glibc or libc6) 2.26 allows attackers to cause a denial of service (segmentation fault), within the assembly code for strrchr, via a crafted argument.	glibc	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3582
57	CVE-2018-4700			A flaw was found in the CUPS printing server. Insufficient randomness makes session cookies predictable, breaking CSRF protection.	cups	Updated	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3303
58	CVE-2018-20796	Medium	HIGH	In the GNU C Library (aka glibc or libc6) through 2.29, check_dst_limits_calc_pos_1 in posix/regexec.c has Uncontrolled Recursion, as demonstrated by '(\227])(\\1\\1|t1|\\2537)+' in grep.	glibc	Updated	None	None	None	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3784
59	CVE-2018-19325	MEDIUM	HIGH	tcpdump 4.9.2 (and probably lower versions) is prone to a heap-based buffer over-read in the EXTRACT_32BITS function (extract.h, called from the rx_cache_find function, print-rx.c) due to improper serviceId sanitization.	tcpdump	Updated	Not vulnerable	Not vulnerable	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1019-4149
60	CVE-2018-14553	MEDIUM	HIGH	gdImageClone in gd.c in libgd 2.1.0-rc2 through 2.2.5 has a NULL pointer dereference allowing attackers to crash an application via a specific function call sequence. Only affects PHP when linked with an external libgd (not bundled).	gd	Updated	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.5	Not vulnerable	LIN1019-4035
61	CVE-2018-14378			An issue was discovered in LibTIFF 4.0.9. A buffer overflow can occur via an invalid or empty tif argument to TIFFWriteBufferSetup in tif_write.c, and it can be exploited (at a minimum) via the following high-level library API function: TIFFWriteTile.	tiff	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4396
62	CVE-2018-14375			An issue was discovered in LibTIFF 4.0.9. A buffer overflow vulnerability can occur via an invalid or empty tif argument to TIFFRGBAImageOK in tif_getimage.c, and it can be exploited (at a minimum) via the following high-level library API functions: TIFFReadRGBAImage, TIFFRGBAImageOK, and TIFFRGBAImageBegin.	tiff	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4412
63	CVE-2018-14374			An issue was discovered in LibTIFF 4.0.9. A buffer overflow can occur via an empty fmt argument to unixErrorHandler in tif_unix.c, and it can be exploited (at a minimum) via the following high-level library API functions: TIFFClientOpen, TIFFFdOpen, TIFFRawStripSize, TIFFCheckTile, TIFFComputeStrip, TIFFReadRawTile, TIFFUnRegisterCODEC, and TIFFWriteEncodedTile.	tiff	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4370

	A	B	C	D	E	F	G	H	I	J	K	L	M
64	CVE-2018-14373			An issue was discovered in LibTIFF 4.0.9. In TIFFFindField in tif_dirinfo.c, the structure tif is being dereferenced without first checking that the structure is not empty and has the requested fields (tif_foundfield). In the call sequences following from the affected library functions (TIFFVGetField, TIFFVGetFieldDefaulted, TIFFVStripSize, TIFFScanlineSize, TIFFTileSize, TIFFGetFieldDefaulted, and TIFFGetField), this sanitization of the tif structure is never being done and, hence, using them with an invalid or empty tif structure will trigger a buffer overflow, leading to a crash.	tiff	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4449
65	CVE-2018-12422	HIGH	CRITICAL	** DISPUTED ** addressbook/backends/ldap/e-book-backend-ldap.c in Evolution-Data-Server in GNOME Evolution through 3.29.2 might allow attackers to trigger a Buffer Overflow via a long query that is processed by the strcat function. NOTE: the software maintainer disputes this because the code had computed the required string length first, and then allocated a large-enough buffer on the heap.	evolution-data-server	Updated	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Won't Fix	LIN1019-3674
66	CVE-2018-10195			Lrzsz has an integer overflow vulernability in the src/zm.c:zsdata() function. An attacker could exploit this with the sz command to cause a crash or potentially leak information to the receiving server.	lrzsz	Updated	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4857
67	CVE-2018-1000845			Avahi version 0.7 contains a Incorrect Access Control vulnerability in avahi-daemon that can result in Traffic reflection and amplification for DDoS attacks.. This attack appear to be exploitable via unicast IP network packet with spoofed source address.	avahi	Updated	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3341
68	CVE-2017-7516			It was found that the cpio --no-absolute-filenames option since version 2.7 did not verify paths during extraction. A specially crafted cpio archive could bypass this option and write to an arbitrary location, outside of the extraction directory.	cpio	Updated	8.0.0.30	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3232
69	CVE-2017-7319			A vulnerability in the Linux kernel package 3.16.0-28 on Ubuntu 14.04 LTS allows any user to send a SIGIO signal to any process. If the process does not catch or ignore the signal, it will exit.	linux	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3881
70	CVE-2017-7286			The Linux kernel package 3.16.0-28 on Ubuntu 14.04 LTS mishandles a series of mmap system calls for /dev/zero with different starting addresses, with a stated impact of allowing for a local user to possibly gain root access, aka an inode integer overflow.	linux	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3959
71	CVE-2017-5123			A flaw was found in the upstream version of the kernels implementation of waitid systemcall. This flaw was the removal of validation of the target location where the kernel would copy the results. Previously it would implement a check to restrict the results to be copied to a valid userspace address, a new patch had inadvertently allowed copying to kernel addresses. An attacker could use this flaw to corrupt memory, panic the machine or possibly allow for arbitary memory writes.	linux	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4205
72	CVE-2017-15107	MEDIUM	High	A vulnerability was found in the implementation of DNSSEC in Dnsmasq up to and including 2.78. Wildcard synthesized NSEC records could be improperly interpreted to prove the non-existence of hostnames that actually exist.	dnsmasq	Updated	8.0.0.25	9.0.0.25	10.17.41.20	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3216
73	CVE-2017-11146			In PHP through 5.6.31, 7.x through 7.0.21, and 7.1.x through 7.1.7, lack of bounds checks in the date extension's timelib_meridian parsing code could be used by attackers able to supply date strings to leak information from the interpreter, related to ext/date/lib/parse_date.c out-of-bounds reads affecting the php_parse_date function. NOTE: this vulnerability exists because of an incomplete fix for CVE-2017-11145.	php	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4646
74	CVE-2016-5875			An exploitable heap based buffer overflow exists in the handling of compressed TIFF images in LibTIFF's PixarLogDecode api. A crafted TIFF document can lead to a heap based buffer overflow resulting in remote code execution. The vulnerability can be triggered through any user controlled TIFF that is handled by this functionality.	libtiff	Updated	8.0.0.15	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3450
75	CVE-2016-5617			Unspecified vulnerability in Oracle MySQL 5.5.51 and earlier, 5.6.32 and earlier, and 5.7.14 and earlier allows local users to affect confidentiality, integrity, and availability via vectors related to Server: Error Handling.	mysql	Updated	8.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-2179
76	CVE-2016-5616			Unspecified vulnerability in Oracle MySQL 5.5.51 and earlier, 5.6.32 and earlier, and 5.7.14 and earlier allows local users to affect confidentiality, integrity, and availability via vectors related to Server: MyISAM.	mysql	Updated	8.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-2169
77	CVE-2016-5320			A vulnerability was found in libtiff. A maliciously crafted TIFF file could cause the application to crash or even enable RCE on vulnerable machine when using rgb2ycbcr command.?	libtiff	Updated	8.0.0.15	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3451
78	CVE-2016-4619			libxml2 in Apple iOS before 9.3.3, OS X before 10.11.6, iTunes before 12.4.2 on Windows, iCloud before 5.2.1 on Windows, tvOS before 9.2.2, and watchOS before 2.2.2 allows remote attackers to cause a denial of service (memory corruption) or possibly have unspecified other impact via unknown vectors, a different vulnerability than CVE-2016-4614, CVE-2016-4615, and CVE-2016-4616.	libxml2	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-1267
79	CVE-2016-4612			libxslt in Apple iOS before 9.3.3, OS X before 10.11.6, iTunes before 12.4.2 on Windows, iCloud before 5.2.1 on Windows, tvOS before 9.2.2, and watchOS before 2.2.2 allows remote attackers to cause a denial of service (memory corruption) or possibly have unspecified other impact via unknown vectors, a different vulnerability than CVE-2016-4607, CVE-2016-4608, CVE-2016-4609, and CVE-2016-4610.	libxslt	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-1262

107	CVE-2020-9431	MEDIUM	HIGH	In Wireshark 3.2.0 to 3.2.1, 3.0.0 to 3.0.8, and 2.6.0 to 2.6.14, the LTE RRC dissector could leak memory. This was addressed in epan/dissectors/packet-lte-rrc.c by adjusting certain append operations.	wireshark	Unchanged	Not vulnerable	9.0.0.25	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4089
108	CVE-2020-9430	MEDIUM	HIGH	In Wireshark 3.2.0 to 3.2.1, 3.0.0 to 3.0.8, and 2.6.0 to 2.6.14, the WiMax DLMAP dissector could crash. This was addressed in plugins/epan/wimax/msg_dlmap.c by validating a length field.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4090
109	CVE-2020-9429	MEDIUM	HIGH	In Wireshark 3.2.0 to 3.2.1, the WireGuard dissector could crash. This was addressed in epan/dissectors/packet-wireguard.c by handling the situation where a certain data structure intentionally has a NULL value.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4091
110	CVE-2020-9428	MEDIUM	HIGH	In Wireshark 3.2.0 to 3.2.1, 3.0.0 to 3.0.8, and 2.6.0 to 2.6.14, the EAP dissector could crash. This was addressed in epan/dissectors/packet-eap.c by using more careful sscanf parsing.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4092
111	CVE-2020-9391	LOW	MEDIUM	An issue was discovered in the Linux kernel 5.4 and 5.5 through 5.5.6 on the AArch64 architecture. It ignores the top byte in the address passed to the brk system call, potentially moving the memory break downwards when the application expects it to move upwards, aka CID-dcde237319e6. This has been observed to cause heap corruption with the GNU C Library malloc implementation.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1019-4078

	A	B	C	D	E	F	G	H	I	J	K	L	M
112	CVE-2020-9383	LOW	HIGH	An issue was discovered in the Linux kernel through 5.5.6. set_fdc in drivers/block/floppy.c leads to a wait_til_ready out-of-bounds read because the FDC index is not checked for errors before assigning it, aka CID-2e90ca68b0d2.	linux	Updated	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.7	Not vulnerable	LIN1019-4079
113	CVE-2020-9366	HIGH	CRITICAL	A buffer overflow was found in the way GNU Screen before 4.8.0 treated the special escape OSC 49. Specially crafted output, or a special program, could corrupt memory and crash Screen or possibly have unspecified other impact.	screen	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.5	Not vulnerable	LIN1019-4073
114	CVE-2020-9365	MEDIUM	HIGH	An issue was discovered in Pure-FTPd 1.0.49. An out-of-bounds (OOB) read has been detected in the pure_strcmp function in utils.c.	pure-ftpd	Unchanged	8.0.0.33	9.0.0.25	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4075
115	CVE-2020-9327	MEDIUM	HIGH	In SQLite 3.31.1, isAuxiliaryVtabOperator allows attackers to trigger a NULL pointer dereference and segmentation fault because of generated column optimizations.	sqlite	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.15	10.19.45.6	None	LIN1019-4072
116	CVE-2020-9308	MEDIUM	HIGH	archive_read_support_format_rar5.c in libarchive before 3.4.2 attempts to unpack a RAR5 file with an invalid or corrupted header (such as a header size of zero), leading to a SIGSEGV or possibly unspecified other impact.	libarchive	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.6	Not vulnerable	LIN1019-4070
117	CVE-2020-9274	MEDIUM	HIGH	An issue was discovered in Pure-FTPd 1.0.49. An uninitialized pointer vulnerability has been detected in the diraliases linked list. When the *lookup_alias(const char alias) or print_aliases(void) function is called, they fail to correctly detect the end of the linked list and try to access a non-existent list member. This is related to init_aliases in diraliases.c.	pure-ftpd	Unchanged	8.0.0.33	9.0.0.25	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4084
118	CVE-2020-9273	HIGH	HIGH	In ProFTPD 1.3.7, it is possible to corrupt the memory pool by interrupting the data transfer channel. This triggers a use-after-free in alloc_pool in pool.c, and possible remote code execution.	proftpd	Unchanged	8.0.0.33	9.0.0.25	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4068
119	CVE-2020-9272	MEDIUM	HIGH	ProFTPD 1.3.7 has an out-of-bounds (OOB) read vulnerability in mod_cap via the cap_text.c cap_to_text function.	proftpd	Unchanged	8.0.0.33	9.0.0.25	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4069
120	CVE-2020-8992	MEDIUM	MEDIUM	ext4_protect_reserved_inode in fs/ext4/block_validity.c in the Linux kernel through 5.5.3 allows attackers to cause a denial of service (soft lockup) via a crafted journal size.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Vulnerable	Investigate	LIN1019-4061
121	CVE-2020-8991	MEDIUM	HIGH	vg_lookup in daemons/lvmetad/lvmetad-core.c in LVM2 2.02 mismanages memory, leading to an lvmetad memory leak, as demonstrated by running pvs.	lvm2	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	Not vulnerable	Not vulnerable	LIN1019-4062
122	CVE-2020-8835	HIGH	HIGH	In the Linux kernel 5.5.0 and newer, the bpf verifier (kernel/bpf/verifier.c) did not properly restrict the register bounds for 32-bit operations, leading to out-of-bounds reads and writes in kernel memory. The vulnerability also affects the Linux 5.4 stable series, starting with v5.4.7, as the introducing commit was backported to that branch. This vulnerability was fixed in 5.6.1, 5.5.14, and 5.4.29. (issue is aka ZDI-CAN-10780)	linux	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Vulnerable	Not vulnerable	LIN1019-4231
123	CVE-2020-8834			KVM in the Linux kernel on Power8 processors has a conflicting use of HSTATE_HOST_R1 to store r1 state in kvmppc_hv_entry plus in kvmppc_{save,restore}_tm, leading to a stack corruption. Because of this, an attacker with the ability run code in kernel space of a guest VM can cause the host kernel to panic. There were two commits that, according to the reporter, introduced the vulnerability: f024ee098476 (KVM: PPC: Book3S HV: Pull out TM state save/restore into separate procedures) 87a11bb6a7f7 (KVM: PPC: Book3S HV: Work around XER[SO] bug in fake suspend mode) The former landed in 4.8, the latter in 4.17. This was fixed without realizing the impact in 4.18 with the following three commits, though it's believed the first is the only strictly necessary commit: 6f597c6b63b6 (KVM: PPC: Book3S PR: Add guest MSR parameter for kvmppc_save_tm()/kvmppc_restore_tm()) 7b0e827c6970 (KVM: PPC: Book3S HV: Factor fake-suspend handling out of kvmppc_save/restore_tm) 009c872a8bc4 (KVM: PPC: Book3S PR: Move kvmppc_save_tm/kvmppc_restore_tm to separate file)	linux	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4268
124	CVE-2020-8832			The fix for the Linux kernel in Ubuntu 18.04 LTS for CVE-2019-14615 (The Linux kernel did not properly clear data structures on context switches for certain Intel graphics processors.) was discovered to be incomplete, meaning that in versions of the kernel before 4.15.0-91.92, an attacker could use this vulnerability to expose sensitive information.	linux	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4270
125	CVE-2020-8649	LOW	HIGH	There is a use-after-free vulnerability in the Linux kernel through 5.5.2 in the vgacon_invert_region function in drivers/video/console/vgacon.c.	linux	Updated	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.16	10.19.45.7	Investigate	LIN1019-4010
126	CVE-2020-8648	LOW	HIGH	There is a use-after-free vulnerability in the Linux kernel through 5.5.2 in the n_tty_receive_buf_common function in drivers/tty/n_tty.c.	linux	Updated	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.7	Investigate	LIN1019-4011
127	CVE-2020-8647	LOW	HIGH	There is a use-after-free vulnerability in the Linux kernel through 5.5.2 in the vc_do_resize function in drivers/tty/vt/vt.c.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Investigate	Investigate	LIN1019-4012
128	CVE-2020-8632	LOW	MEDIUM	In cloud-init through 19.4, rand_user_password in cloudinit/config/cc_set_passwords.py has a small default pwlen value, which makes it easier for attackers to guess passwords.	cloud-init	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4044
129	CVE-2020-8631	LOW	MEDIUM	cloud-init through 19.4 relies on Mersenne Twister for a random password, which makes it easier for attackers to predict passwords, because rand_str in cloudinit/util.py calls the random.choice function.	cloud-init	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4046
130	CVE-2020-8608	HIGH	CRITICAL	In libslirp 4.1.0, as used in QEMU 4.2.0, tcp_subr.c misuses snprintf return values, leading to a buffer overflow in later code.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Won't Fix	LIN1019-4043

132	CVE-2020-8552	MEDIUM	HIGH	The Kubernetes API server component in versions prior to 1.15.9, 1.16.0-1.16.6, and 1.17.0-1.17.2 has been found to be vulnerable to a denial of service attack via successful API requests.	kubernetes	Updated	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Investigate	Investigate	LIN1019-4189
133	CVE-2020-8551	LOW	MEDIUM	The Kubelet component in versions 1.15.0-1.15.9, 1.16.0-1.16.6, and 1.17.0-1.17.2 has been found to be vulnerable to a denial of service attack via the kubelet API, including the unauthenticated HTTP read-only API typically served on port 10255, and the authenticated HTTPS API typically served on port 10250.	kubernetes	Updated	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Investigate	Investigate	LIN1019-4190
134	CVE-2020-8517	MEDIUM	HIGH	An issue was discovered in Squid before 4.10. Due to incorrect input validation, the NTLM authentication credentials parser in ext_lm_group_acl may write to memory outside the credentials buffer. On systems with memory access protections, this can result in the helper process being terminated unexpectedly. This leads to the Squid process also terminating and a denial of service for all clients using the proxy.	squid	Unchanged	8.0.0.33	9.0.0.25	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4008
135	CVE-2020-8492	MEDIUM	HIGH	Python 2.7 through 2.7.17, 3.5 through 3.5.9, 3.6 through 3.6.10, 3.7 through 3.7.6, and 3.8 through 3.8.1 allows an HTTP server to conduct Regular Expression Denial of Service (ReDoS) attacks against a client because of urllib.request.AbstractBasicAuthHandler catastrophic backtracking.	python	Unchanged	Vulnerable	Investigate	Investigate	Vulnerable	Investigate	Investigate	LIN1019-3979
136	CVE-2020-8450	HIGH	HIGH	An issue was discovered in Squid before 4.10. Due to incorrect buffer management, a remote client can cause a buffer overflow in a Squid instance acting as a reverse proxy.	squid	Unchanged	8.0.0.33	9.0.0.25	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4007
137	CVE-2020-8449	MEDIUM	HIGH	An issue was discovered in Squid before 4.10. Due to incorrect input validation, it can interpret crafted HTTP requests in unexpected ways to access server resources prohibited by earlier security filters.	squid	Unchanged	8.0.0.33	9.0.0.25	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4006
138	CVE-2020-8432	HIGH	CRITICAL	In Das U-Boot through 2020.01, a double free has been found in the cmd/gpt.c do_rename_gpt_parts() function. Double freeing may result in a write-what-where condition, allowing an attacker to execute arbitrary code. NOTE: this vulnerability was introduced when attempting to fix a memory leak identified by static analysis.	u-boot	Unchanged	Investigate	Investigate	Investigate	Investigate	Investigate	Vulnerable	LIN1019-4053
139	CVE-2020-8428	LOW	HIGH	fs/namei.c in the Linux kernel before 5.5 has a may_create_in_sticky use-after-free, which allows local users to cause a denial of service (OOPS) or possibly obtain sensitive information from kernel memory, aka CID-d0cb50185ae9. One attack vector may be an open system call for a UNIX domain socket, if the socket is being moved to a new parent directory and its old parent directory is being removed.	linux	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.7	Not vulnerable	LIN1019-3978
140	CVE-2020-8112	MEDIUM	HIGH	opj_t1_clbl_decode_processor in openjp2/t1.c in OpenJPEG 2.3.1 through 2020-01-28 has a heap-based buffer overflow in the qmfbid==1 case, a different issue than CVE-2020-6851.	openjpeg	Unchanged	Won't Fix	9.0.0.25	Won't Fix	Won't Fix	10.19.45.5	None	LIN1019-3985
141	CVE-2020-8003	LOW	MEDIUM	A double-free vulnerability in vrend_renderer.c in virglrenderer through 0.8.1 allows attackers to cause a denial of service by triggering texture allocation failure, because vrend_renderer_resource_allocated_texture is not an appropriate place for a free.	virglrenderer	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.4	Not vulnerable	LIN1019-3981
142	CVE-2020-8002	LOW	MEDIUM	A NULL pointer dereference in vrend_renderer.c in virglrenderer through 0.8.1 allows attackers to cause a denial of service via commands that attempt to launch a grid without previously providing a Compute Shader (CS).	virglrenderer	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.4	Not vulnerable	LIN1019-3982
143	CVE-2020-7957	MEDIUM	MEDIUM	The IMAP and LMTP components in Dovecot 2.3.9 before 2.3.9.3 mishandle snippet generation when many characters must be read to compute the snippet and a trailing > character exists. This causes a denial of service in which the recipient cannot read all of their messages.	dovecot	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4037
144	CVE-2020-7919	HIGH	HIGH	Go before 1.12.16 and 1.13.x before 1.13.7 (and the crypto/cryptobyte package before 0.0.0-20200124225646-8b5121be2f68 for Go) allows attacks on clients (resulting in a panic) via a malformed X.509 certificate.	go	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.16	10.19.45.6	Not vulnerable	LIN1019-4147
145	CVE-2020-7595	MEDIUM	HIGH	xmlStringLenDecodeEntities in parser.c in libxml2 2.9.10 has an infinite loop in a certain end-of-file situation.	libxml2	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.14	10.19.45.4	10.20.9.0	LIN1019-3966
146	CVE-2020-7221	HIGH	HIGH	mysql_install_db in MariaDB 10.4.7 through 10.4.11 allows privilege escalation from the mysql user account to root because chown and chmod are performed unsafely, as demonstrated by a symlink attack on a chmod 04755 of auth_pam_tool_dir/auth_pam_tool. NOTE: this does not affect the Oracle MySQL product, which implements mysql_install_db differently.	mariadb	Unchanged	Investigate	Investigate	Investigate	Investigate	Vulnerable	Investigate	LIN1019-4009
147	CVE-2020-7212	HIGH	HIGH	The _encode_invalid_chars function in util/url.py in the urllib3 library 1.25.2 through 1.25.7 for Python allows a denial of service (CPU consumption) because of an inefficient algorithm. The percent_encodings array contains all matches of percent encodings. It is not deduplicated. For a URL of length N, the size of percent_encodings may be up to O(N). The next step (normalize existing percent-encoded bytes) also takes up to O(N) for each step, so the total time is O(N^2). If percent_encodings were deduplicated, the time to compute _encode_invalid_chars would be O(kN), where k is at most 484 ((10+6*2)^2).	python-urllib3	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.6	Won't Fix	LIN1019-4121
148	CVE-2020-7105	MEDIUM	HIGH	async.c and dict.c in libhiredis.a in hiredis through 0.14.0 allow a NULL pointer dereference because malloc return values are unchecked.	hiredis	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3933
149	CVE-2020-7066	MEDIUM	MEDIUM	In PHP versions 7.2.x below 7.2.9, 7.3.x below 7.3.16 and 7.4.x below 7.4.34, while using get_headers() with user-supplied URL, if the URL contains zero (\0) character, the URL will be silently truncated at it. This may cause some software to make incorrect assumptions about the target of the get_headers() and possibly send some information to a wrong server.	php	Updated	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.16	10.19.45.7	Investigate	LIN1019-4208

	A	B	C	D	E	F	G	H	I	J	K	L	M
150	CVE-2020-7065	MEDIUM	HIGH	In PHP versions 7.3.x below 7.3.16 and 7.4.x below 7.4.34, while using mb_strtolower() function with UTF-32LE encoding, certain invalid strings could cause PHP to overwrite stack-allocated buffer. This could lead to memory corruption, crashes and potentially code execution.	php	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.7	Investigate	LIN1019-4209
151	CVE-2020-7064	MEDIUM	MEDIUM	In PHP versions 7.2.x below 7.2.9, 7.3.x below 7.3.16 and 7.4.x below 7.4.34, while parsing EXIF data with exif_read_data() function, it is possible for malicious data to cause PHP to read one byte of uninitialized memory. This could potentially lead to information disclosure or crash.	php	Updated	8.0.0.33	9.0.0.25	10.17.41.21	10.18.44.16	10.19.45.7	Investigate	LIN1019-4210
152	CVE-2020-7063	MEDIUM	MEDIUM	In PHP versions 7.2.x below 7.2.28, 7.3.x below 7.3.15 and 7.4.x below 7.4.3, when creating PHAR archive using PharData::buildFromIterator() function, the files are added with default permissions (0666, or all access) even if the original files on the filesystem were with more restrictive permissions. This may result in files having more lax permissions than intended when such archive is extracted.	php	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.6	Investigate	LIN1019-4093
153	CVE-2020-7062	MEDIUM	HIGH	In PHP versions 7.2.x below 7.2.28, 7.3.x below 7.3.15 and 7.4.x below 7.4.3, when using file upload functionality, if upload progress tracking is enabled, but session.upload_progress.cleanup is set to 0 (disabled), and the file upload fails, the upload procedure would try to clean up data that does not exist and encounter null pointer dereference, which would likely lead to a crash.	php	Unchanged	Vulnerable	Vulnerable	10.17.41.20	10.18.44.15	10.19.45.6	Investigate	LIN1019-4094

163	CVE-2020-6750	MEDIUM	MEDIUM	GSocketClient in GNOME GLib through 2.62.4 may occasionally connect directly to a target address instead of connecting via a proxy server when configured to do so, because the proxy_addr field is mishandled. This bug is timing-dependent and may occur only sporadically depending on network delays. The greatest security relevance is in use cases where a proxy is used to help with privacy/anonymity, even though there is no technical barrier to a direct connection. NOTE: versions before 2.60 are unaffected.	glib-2.0	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.6	Investigate	LIN1019-4110
164	CVE-2020-6582	MEDIUM	HIGH	Nagios NRPE 3.2.1 has a Heap-Based Buffer Overflow, as demonstrated by interpretation of a small negative number as a large positive number during a bzero call.	nagios-nrpe	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.16	10.19.45.6	Investigate	LIN1019-4144
165	CVE-2020-6581	MEDIUM	CRITICAL	Nagios NRPE 3.2.1 has Insufficient Filtering because, for example, nasty_metachars interprets \n as the character \ and the character n (not as the \n newline sequence). This can cause command injection.	nagios-nrpe	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.16	10.19.45.6	Investigate	LIN1019-4148

	A	B	C	D	E	F	G	H	I	J	K	L	M
166	CVE-2020-6096	HIGH	CRITICAL	An exploitable signed comparison vulnerability exists in the ARMv7 memcpy() implementation of GNU glibc 2.30.9000. Calling memcpy() (on ARMv7 targets that utilize the GNU glibc implementation) with a negative value for the 'num' parameter results in a signed comparison vulnerability. If an attacker underflows the 'num' parameter to memcpy(), this vulnerability could lead to undefined behavior such as writing to out-of-bounds memory and potentially remote code execution. Furthermore, this memcpy() implementation allows for program execution to continue in scenarios where a segmentation fault or crash should have occurred. The dangers occur in that subsequent execution and iterations of this code will be executed with this corrupted data.	glibc	Updated	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4216
167	CVE-2020-5504	MEDIUM	HIGH	In phpMyAdmin 4 before 4.9.4 and 5 before 5.0.1, SQL injection exists in the user accounts page. A malicious user could inject custom SQL in place of their own username when creating queries to this page. An attacker must have a valid MySQL account to access the server.	phpmyadmin	Updated	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.14	10.19.45.4	Not vulnerable	LIN1019-3909

182	CVE-2020-2655	MEDIUM	MEDIUM	Vulnerability in the Java SE product of Oracle Java SE (component: JSSE). Supported versions that are affected are Java SE: 11.0.5 and 13.0.1. Difficult to exploit vulnerability allows unauthenticated attacker with network access via HTTPS to compromise Java SE. Successful attacks of this vulnerability can result in unauthorized update, insert or delete access to some of Java SE accessible data as well as unauthorized read access to a subset of Java SE accessible data. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets (in Java SE 8), that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability can also be exploited by using APIs in the specified Component, e.g., through a web service which supplies data to the APIs. CVSS 3.0 Base Score 4.8 (Confidentiality and Integrity impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:H/PR:N/UI:N/S:U/C:L/I:L/A:N).	jdk&jre	Unchanged	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-11994
183	CVE-2020-2654	MEDIUM	LOW	Vulnerability in the Java SE product of Oracle Java SE (component: Libraries). Supported versions that are affected are Java SE: 7u241, 8u231, 11.0.5 and 13.0.1. Difficult to exploit vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE. Successful attacks of this vulnerability can result in unauthorized ability to cause a partial denial of service (partial DOS) of Java SE. Note: This vulnerability can only be exploited by supplying data to APIs in the specified Component without using Untrusted Java Web Start applications or Untrusted Java applets, such as through a web service. CVSS 3.0 Base Score 3.7 (Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:H/PR:N/UI:N/S:U/C:N/I:N/A:L).	jdk&jre	Unchanged	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-11995
184	CVE-2020-2627	MEDIUM	MEDIUM	Vulnerability in the MySQL Server product of Oracle MySQL (component: Server: Parser). Supported versions that are affected are 8.0.18 and prior. Easily exploitable vulnerability allows low privileged attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS 3.0 Base Score 6.5 (Availability impacts). 201	CVE-2020-1934	HIGH	CRITICAL	In Apache HTTP Server 2.4.0 to 2.4.41, mod_proxy_ftp may use uninitialized memory when proxying to a malicious FTP server.	apache2	Updated	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4217
202	CVE-2020-1927	MEDIUM	MEDIUM	In Apache HTTP Server 2.4.0 to 2.4.41, redirects configured with mod_rewrite that were intended to be self-referential might be fooled by encoded newlines and redirect instead to an an unexpected URL within the request URL.	apache2	Unchanged	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4218
203	CVE-2020-1747	HIGH	CRITICAL	A vulnerability was discovered in the PyYAML library in versions before 5.3.1, where it is susceptible to arbitrary code execution when it processes untrusted YAML files through the full_load method or with the FullLoader loader. Applications that use the library to process untrusted input may be vulnerable to this flaw. An attacker could use this flaw to execute arbitrary code on the system by abusing the python/object/new constructor.	python-pyyaml	Updated	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4178
204	CVE-2020-1720	LOW	MEDIUM	A flaw was found in PostgreSQL's ALTER ... DEPENDS ON EXTENSION, where sub-commands did not perform authorization checks. An authenticated attacker could use this flaw in certain configurations to perform drop objects such as function, triggers, et al., leading to database corruption. This issue affects PostgreSQL versions before 12.2, before 11.7, before 10.12 and before 9.6.17.	postgresql	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.16	10.19.45.6	Not vulnerable	LIN1019-4152
205	CVE-2020-1712			A heap use-after-free vulnerability was found in systemd before version v245-rc1, where asynchronous Polkit queries are performed while handling dbus messages. A local unprivileged attacker can abuse this flaw to crash systemd services or potentially execute code and elevate their privileges, by sending specially crafted dbus messages.	systemd	Updated	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Investigate	LIN1019-4212
206	CVE-2020-1711	MEDIUM	CRITICAL	An out-of-bounds heap buffer access flaw was found in the way the iSCSI Block driver in QEMU versions 2.12.0 before 4.2.1 handled a response coming from an iSCSI server while checking the status of a Logical Address Block (LBA) in an iscsi_co_block_status() routine. A remote user could use this flaw to crash the QEMU process, resulting in a denial of service or potential execution of arbitrary code with privileges of the QEMU process on the host.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.15	10.19.45.5	10.20.12.0	LIN1019-4032
207	CVE-2020-11668			In the Linux kernel before 5.6.1, drivers/media/usb/gspca/xirlink_cit.c (aka the Xirlink camera USB driver) mishandles invalid descriptors, aka CID-a246b4d54770.	linux	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4269
208	CVE-2020-11656			In SQLite through 3.31.1, the ALTER TABLE implementation has a use-after-free, as demonstrated by an ORDER BY clause that belongs to a compound SELECT statement.	sqlite3	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4261
209	CVE-2020-11655			SQLite through 3.31.1 allows attackers to cause a denial of service (segmentation fault) via a malformed window-function query because the AggInfo object's initialization is mishandled.	sqlite3	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4262
210	CVE-2020-11609	MEDIUM	MEDIUM	An issue was discovered in the stv06xx subsystem in the Linux kernel before 5.6.1. drivers/media/usb/gspca/stv06xx/stv06xx.c and drivers/media/usb/gspca/stv06xx/stv06xx_pb0100.c mishandle invalid descriptors, as demonstrated by a NULL pointer dereference, aka CID-485b06aadb93.	linux	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4253
211	CVE-2020-11608	LOW	MEDIUM	An issue was discovered in the Linux kernel before 5.6.1. drivers/media/usb/gspca/ov519.c allows NULL pointer dereferences in ov511_mode_init_regs and ov518_mode_init_regs when there are zero endpoints, aka CID-998912346c0d.	linux	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4254
212	CVE-2020-11565	MEDIUM	HIGH	An issue was discovered in the Linux kernel through 5.6.2. mpol_parse_str in mm/mempolicy.c has a stack-based out-of-bounds write because an empty nodelist is mishandled during mount option parsing, aka CID-aa9f7d5172fa.	linux	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4245

	A	B	C	D	E	F	G	H	I	J	K	L	M
213	CVE-2020-11501	MEDIUM	CRITICAL	GnuTLS 3.6.x before 3.6.13 uses incorrect cryptography for DTLS. The earliest affected version is 3.6.3 (2018-07-16) because of an error in a 2017-10-06 commit. The DTLS client always uses 32 '\0' bytes instead of a random value, and thus contributes no randomness to a DTLS negotiation. This breaks the security guarantees of the DTLS protocol.	gnutls	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4237
214	CVE-2020-11494	LOW	MEDIUM	An issue was discovered in slc_bump in drivers/net/can/slcan.c in the Linux kernel through 5.6.2. It allows attackers to read uninitialized can_frame data, potentially containing sensitive information from kernel stack memory, if the configuration lacks CONFIG_INIT_STACK_ALL, aka CID-b9258a2cece4.	linux	Updated	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Investigate	LIN1019-4230
215	CVE-2020-11441	MEDIUM	MEDIUM	** DISPUTED ** phpMyAdmin 5.0.2 allows CRLF injection, as demonstrated by %0D%0Astring%0D%0A inputs to login form fields causing CRLF sequences to be reflected on an error page. NOTE: the vendor states I don't see anything specifically exploitable.	phpmyadmin	Unchanged	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4211
216	CVE-2020-11102	HIGH	CRITICAL	hw/net/tulip.c in QEMU 4.2.0 has a buffer overflow during the copying of tx/rx buffers because the frame size is not validated against the r/w data length.	qemu	New	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4249
217	CVE-2020-10942	MEDIUM	MEDIUM	In the Linux kernel before 5.5.8, get_raw_socket in drivers/vhost/net.c lacks validation of an sk_family field, which might allow attackers to trigger kernel stack corruption via crafted system calls.	linux	Updated	8.0.0.33	9.0.0.25	Investigate	10.18.44.16	Investigate	10.20.15.0	LIN1019-4176
218	CVE-2020-10941	MEDIUM	MEDIUM	Arm Mbed TLS before 2.6.15 allows attackers to obtain sensitive information (an RSA private key) by measuring cache usage during an import.	mbedtls	Updated	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4177
219	CVE-2020-10804	MEDIUM	HIGH	In phpMyAdmin 4.x before 4.9.5 and 5.x before 5.0.2, a SQL injection vulnerability was found in retrieval of the current username (in libraries/classes/Server/Privileges.php and libraries/classes/UserPassword.php). A malicious user with access to the server could create a crafted username, and then trick the victim into performing specific actions with that user account (such as editing its privileges).	phpmyadmin	Updated	Investigate	Investigate	Investigate	10.18.44.16	10.19.45.6	Not vulnerable	LIN1019-4157
220	CVE-2020-10803	LOW	MEDIUM	In phpMyAdmin 4.x before 4.9.5 and 5.x before 5.0.2, a SQL injection vulnerability was discovered where malicious code could be used to trigger an XSS attack through retrieving and displaying results (in tbl_get_field.php and libraries/classes/Display/Results.php). The attacker must be able to insert crafted data into certain database tables, which when retrieved (for instance, through the Browse tab) can trigger the XSS attack.	phpmyadmin	Updated	Investigate	Investigate	Investigate	10.18.44.16	10.19.45.6	Not vulnerable	LIN1019-4164
221	CVE-2020-10802	MEDIUM	HIGH	In phpMyAdmin 4.x before 4.9.5 and 5.x before 5.0.2, a SQL injection vulnerability has been discovered where certain parameters are not properly escaped when generating certain queries for search actions in libraries/classes/Controllers/Table/TableSearchController.php. An attacker can generate a crafted database or table name. The attack can be performed if a user attempts certain search operations on the malicious database or table.	phpmyadmin	Updated	Investigate	Investigate	Investigate	10.18.44.16	10.19.45.6	Not vulnerable	LIN1019-4165
222	CVE-2020-10648	MEDIUM	HIGH	Das U-Boot through 2020.01 allows attackers to bypass verified boot restrictions and subsequently boot arbitrary images by providing a crafted FIT image to a system configured to boot the default configuration.	u-boot	Unchanged	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4156
223	CVE-2020-10593	MEDIUM	HIGH	Tor before 0.3.5.10, 0.4.x before 0.4.1.9, and 0.4.2.x before 0.4.2.7 allows remote attackers to cause a Denial of Service (memory leak), aka TROVE-2020-004. This occurs in circpad_setup_machine_on_circ because a circuit-padding machine can be negotiated twice on the same circuit.	tor	Updated	Not vulnerable	Not vulnerable	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-7115
224	CVE-2020-10592	MEDIUM	HIGH	Tor before 0.3.5.10, 0.4.x before 0.4.1.9, and 0.4.2.x before 0.4.2.7 allows remote attackers to cause a Denial of Service (CPU consumption), aka TROVE-2020-002.	tor	Updated	Not vulnerable	Not vulnerable	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-7114
225	CVE-2020-10251	MEDIUM	MEDIUM	In ImageMagick 7.0.9, an out-of-bounds read vulnerability exists within the ReadHEICImageByID function in coders\heic.c. It can be triggered via an image with a width or height value that exceeds the actual size of the image.	imagemagick	Unchanged	Investigate	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4126
226	CVE-2020-10188	HIGH	CRITICAL	utility.c in telnetd in netkit telnet through 0.17 allows remote attackers to execute arbitrary code via short writes or urgent data, because of a buffer overflow involving the netclear and nextitem functions.	netkit-telnet	Unchanged	Investigate	Investigate	Investigate	Investigate	Investigate	Investigate	LIN1019-4120
227	CVE-2020-10029	LOW	MEDIUM	The GNU C Library (aka glibc or libc6) before 2.32 could overflow an on-stack buffer during range reduction if an input to an 80-bit long double function contains a non-canonical bit pattern, a seen when passing a 0x5d41414141414410000 value to sinl on x86 targets. This is related to sysdeps/ieee754/ldbl-96/e_rem_pio2l.c.	glibc	Unchanged	Vulnerable	Vulnerable	Investigate	Investigate	10.19.45.6	None	LIN1019-4109
228	CVE-2020-10018	MEDIUM	HIGH	WebKitGTK through 2.26.4 and WPE WebKit through 2.26.4 (which are the versions right before 2.28.0) contains a memory corruption issue (use-after-free) that may lead to arbitrary code execution. This issue has been fixed in 2.28.0 with improved memory handling.	webkitgtk	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	10.19.45.6	Investigate	LIN1019-4111
229	CVE-2020-0556	MEDIUM	HIGH	Improper access control in subsystem for BlueZ before version 5.53 may allow an unauthenticated user to potentially enable escalation of privilege and denial of service via adjacent access.	bluez5	Unchanged	Investigate	9.0.0.25	10.17.41.20	10.18.44.16	10.19.45.6	None	LIN1019-4135
230	CVE-2019-9959	Medium	MEDIUM	The JPXStream::init function in Poppler 0.78.0 and earlier doesn't check for negative values of stream length, leading to an Integer Overflow, thereby making it possible to allocate a large memory chunk on the heap, with a size controlled by an attacker, as demonstrated by pdftocairo.	poppler	Unchanged	Won't Fix	9.0.0.24	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4471

	A	B	C	D	E	F	G	H	I	J	K	L	M
231	CVE-2019-9956	Medium	HIGH	In ImageMagick 7.0.8-35 Q16, there is a stack-based buffer overflow in the function PopHexPixel of coders/ps.c, which allows an attacker to cause a denial of service or code execution via a crafted image file.	imagemagick	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3774
232	CVE-2019-9948	Medium	CRITICAL	urllib in Python 2.x through 2.7.16 supports the local_file: scheme, which makes it easier for remote attackers to bypass protection mechanisms that blacklist file: URIs, as demonstrated by triggering a urllib.urlopen('local_file:///etc/passwd') call.	python	Unchanged	8.0.0.31	9.0.0.21	10.17.41.16	10.18.44.7	Not vulnerable	Not vulnerable	LIN1018-3717
233	CVE-2019-9947	Medium	MEDIUM	An issue was discovered in urllib2 in Python 2.x through 2.7.16 and urllib in Python 3.x through 3.7.2. CRLF injection is possible if the attacker controls a url parameter, as demonstrated by the first argument to urllib.request.urlopen with \r\n (specifically in the query string or PATH_INFO) followed by an HTTP header or a Redis command. This is similar to CVE-2019-9740.	python	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.9	Not vulnerable	Not vulnerable	LIN1018-3718
234	CVE-2019-9946	Medium	HIGH	Cloud Native Computing Foundation (CNCF) CNI (Container Networking Interface) 0.7.4 has a network firewall misconfiguration which affects Kubernetes. The CNI 'portmap' plugin, used to setup HostPorts for CNI, inserts rules at the front of the iptables nat chains; which take precedence over the KUBE- SERVICES chain. Because of this, the HostPort/portmap rule could match incoming traffic even if there were better fitting, more specific service definition rules like NodePorts later in the chain. The issue is fixed in CNI 0.7.5 and Kubernetes 1.11.9, 1.12.7, 1.13.5, and 1.14.0.	cni	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3854
235	CVE-2019-9937	Medium	HIGH	In SQLite 3.27.2, interleaving reads and writes in a single transaction with an fts5 virtual table will lead to a NULL Pointer Dereference in fts5ChunkIterate in sqlite3.c. This is related to ext/fts5/fts5_hash.c and ext/fts5/fts5_index.c.	sqlite	Unchanged	Vulnerable	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3713
236	CVE-2019-9936	Medium	HIGH	In SQLite 3.27.2, running fts5 prefix queries inside a transaction could trigger a heap-based buffer over-read in fts5HashEntrySort in sqlite3.c, which may lead to an information leak. This is related to ext/fts5/fts5_hash.c.	sqlite	Unchanged	Not vulnerable	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3714

265	CVE-2019-9545	Medium	HIGH	An issue was discovered in Poppler 0.74.0. A recursive function call, in JBIG2Stream::readTextRegion() located in JBIG2Stream.cc, can be triggered by sending a crafted pdf file to (for example) the pdfimages binary. It allows an attacker to cause Denial of Service (Segmentation fault) or possibly have unspecified other impact. This is related to JBIG2Bitmap::clearToZero.	poppler	Unchanged	Won't Fix	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3700
266	CVE-2019-9543	Medium	HIGH	An issue was discovered in Poppler 0.74.0. A recursive function call, in JBIG2Stream::readGenericBitmap() located in JBIG2Stream.cc, can be triggered by sending a crafted pdf file to (for example) the pdfseparate binary. It allows an attacker to cause Denial of Service (Segmentation fault) or possibly have unspecified other impact. This is related to JArithmeticDecoder::decodeBit.	poppler	Unchanged	Won't Fix	Vulnerable	Won't Fix	Won't Fix	Investigate	Not vulnerable	LIN1018-3766
267	CVE-2019-9503	HIGH	HIGH	The Broadcom brcmfmac WiFi driver prior to commit a4176ec356c73a46c07c181c6d04039faf a34a9f is vulnerable to a frame validation bypass. If the brcmfmac driver receives a firmware event frame from a remote source, the is_wlc_event_frame function will cause this frame to be discarded and unprocessed. If the driver receives the firmware event frame from the host, the appropriate handler is called. This frame validation can be bypassed if the bus used is USB (for instance by a wifi dongle). This can allow firmware event frames from a remote source to be processed. In the worst case scenario, by sending specially-crafted WiFi packets, a remote, unauthenticated attacker may be able to execute arbitrary code on a vulnerable system. More typically, this vulnerability will result in denial-of-service conditions.	linux	Unchanged	Not vulnerable	9.0.0.25	10.17.41.20	Not vulnerable	Not vulnerable	Not vulnerable	LIN1019-3943

	A	B	C	D	E	F	G	H	I	J	K	L	M
268	CVE-2019-9500	HIGH	HIGH	The Broadcom brcmfmac WiFi driver prior to commit 1b5e2423164b3670e8bc9174e4762d297990deff is vulnerable to a heap buffer overflow. If the Wake-up on Wireless LAN functionality is configured, a malicious event frame can be constructed to trigger an heap buffer overflow in the brcmf_wowl_nd_results function. This vulnerability can be exploited with compromised chipsets to compromise the host, or when used in combination with CVE-2019-9503, can be used remotely. In the worst case scenario, by sending specially-crafted WiFi packets, a remote, unauthenticated attacker may be able to execute arbitrary code on a vulnerable system. More typically, this vulnerability will result in denial-of-service conditions.	linux	Unchanged	Not vulnerable	9.0.0.25	10.17.41.20	Not vulnerable	Not vulnerable	Not vulnerable	LIN1019-3942
269	CVE-2019-9499	Medium	HIGH	The implementations of EAP-PWD in wpa_supplicant EAP Peer, when built against a crypto library missing explicit validation on imported elements, do not validate the scalar and element values in EAP-pwd-Commit. An attacker may complete authentication, session key and control of the data connection with a client. Both hostapd with SAE support and wpa_supplicant with SAE support prior to and including version 2.4 are affected. Both hostapd with EAP-pwd support and wpa_supplicant with EAP-pwd support prior to and including version 2.7 are affected.	hostapd&wpa-supplicant	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3917
270	CVE-2019-9498	Medium	HIGH	The implementations of EAP-PWD in hostapd EAP Server, when built against a crypto library missing explicit validation on imported elements, do not validate the scalar and element values in EAP-pwd-Commit. An attacker may be able to use invalid scalar/element values to complete authentication, gaining session key and network access without needing or learning the password. Both hostapd with SAE support and wpa_supplicant with SAE support prior to and including version 2.4 are affected. Both hostapd with EAP-pwd support and wpa_supplicant with EAP-pwd support prior to and including version 2.7 are affected.	hostapd&wpa-supplicant	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3918
271	CVE-2019-9497	Medium	HIGH	The implementations of EAP-PWD in hostapd EAP Server and wpa_supplicant EAP Peer do not validate the scalar and element values in EAP-pwd-Commit. This vulnerability may allow an attacker to complete EAP-PWD authentication without knowing the password. However, unless the crypto library does not implement additional checks for the EC point, the attacker will not be able to derive the session key or complete the key exchange. Both hostapd with SAE support and wpa_supplicant with SAE support prior to and including version 2.4 are affected. Both hostapd with EAP-pwd support and wpa_supplicant with EAP-pwd support prior to and including version 2.7 are affected.	hostapd&wpa-supplicant	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3922
272	CVE-2019-9496	Medium	HIGH	An invalid authentication sequence could result in the hostapd process terminating due to missing state validation steps when processing the SAE confirm message when in hostapd/AP mode. All version of hostapd with SAE support are vulnerable. An attacker may force the hostapd process to terminate, performing a denial of service attack. Both hostapd with SAE support and wpa_supplicant with SAE support prior to and including version 2.7 are affected.	hostapd&wpa-supplicant	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3921
273	CVE-2019-9495	Medium	LOW	The implementations of EAP-PWD in hostapd and wpa_supplicant are vulnerable to side-channel attacks as a result of cache access patterns. All versions of hostapd and wpa_supplicant with EAP-PWD support are vulnerable. The ability to install and execute applications is necessary for a successful attack. Memory access patterns are visible in a shared cache. Weak passwords may be cracked. Versions of hostapd/wpa_supplicant 2.7 and newer, are not vulnerable to the timing attack described in CVE-2019-9494. Both hostapd with EAP-pwd support and wpa_supplicant with EAP-pwd support prior to and including version 2.7 are affected.	hostapd&wpa-supplicant	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3920
274	CVE-2019-9494	Medium	MEDIUM	The implementations of SAE in hostapd and wpa_supplicant are vulnerable to side channel attacks as a result of observable timing differences and cache access patterns. An attacker may be able to gain leaked information from a side channel attack that can be used for full password recovery. Both hostapd with SAE support and wpa_supplicant with SAE support prior to and including version 2.7 are affected.	hostapd&wpa-supplicant	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3919
275	CVE-2019-9215	High	CRITICAL	In Live555 before 2019.02.27, malformed headers lead to invalid memory access in the parseAuthorizationHeader function.	live555	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3786
276	CVE-2019-9214	Medium	HIGH	In Wireshark 2.4.0 to 2.4.12 and 2.6.0 to 2.6.6, the RPCAP dissector could crash. This was addressed in epan/dissectors/packet-rpcap.c by avoiding an attempted dereference of a NULL conversation.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3721
277	CVE-2019-9213	Medium	MEDIUM	In the Linux kernel before 4.20.14, expand_downwards in mm/mmap.c lacks a check for the mmap minimum address, which makes it easier for attackers to exploit kernel NULL pointer dereferences on non-SMAP platforms. This is related to a capability check for the wrong task.	linux	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3758
278	CVE-2019-9209	Medium	HIGH	In Wireshark 2.4.0 to 2.4.12 and 2.6.0 to 2.6.6, the ASN.1 BER and related dissectors could crash. This was addressed in epan/dissectors/packet-ber.c by preventing a buffer overflow associated with excessive digits in time values.	wireshark	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3722
279	CVE-2019-9208	Medium	HIGH	In Wireshark 2.4.0 to 2.4.12 and 2.6.0 to 2.6.6, the TCAP dissector could crash. This was addressed in epan/dissectors/asn1/tcap/tcap.cnf by avoiding NULL pointer dereferences.	wireshark	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3723

	A	B	C	D	E	F	G	H	I	J	K	L	M
280	CVE-2019-9200	Medium	HIGH	A heap-based buffer underwrite exists in ImageStream::getLine() located at Stream.cc in Poppler 0.74.0 that can (for example) be triggered by sending a crafted PDF file to the pdfimages binary. It allows an attacker to cause Denial of Service (Segmentation fault) or possibly have unspecified other impact.	poppler	Unchanged	Won't Fix	9.0.0.21	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3767
281	CVE-2019-9192	MEDIUM	HIGH	** DISPUTED ** In the GNU C Library (aka glibc or libc6) through 2.29, check_dst_limits_calc_pos_1 in posix/regexec.c has Uncontrolled Recursion, as demonstrated by '(|)(\\1|\1)*' in grep, a different issue than CVE-2019-20796. NOTE: the software maintainer disputes that this is a vulnerability because the behavior occurs only with a crafted pattern.	glibc	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1019-976
282	CVE-2019-9185	Medium	HIGH	Controller/Async/FilesystemManager.php in the filemanager in Bolt before 3.6.5 allows remote attackers to execute arbitrary PHP code by renaming a previously uploaded file to have a .php extension.	bolt	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-10686
283	CVE-2019-9169	High	CRITICAL	In the GNU C Library (aka glibc or libc6) through 2.29, proceed_next_node in posix/regexec.c has a heap-based buffer over-read via an attempted case-insensitive regular-expression match.	glibc	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3778
284	CVE-2019-9162	Medium	HIGH	In the Linux kernel before 4.20.12, net/ipv4/netfilter/nf_nat_snmp_basic_main.c in the SNMP NAT module has insufficient ASN.1 length checks (aka an array index error), making out-of-bounds read and write operations possible, leading to an OOPS or local privilege escalation. This affects snmp_version and snmp_helper.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3759
285	CVE-2019-9077	Medium	HIGH	An issue was discovered in GNU Binutils 2.32. It is a heap-based buffer overflow in process_mips_specific in readelf.c via a malformed MIPS option section.	binutils	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	10.19.45.1	Not vulnerable	LIN1018-3724
286	CVE-2019-9076	Medium	MEDIUM	An issue was discovered in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.32. It is an attempted excessive memory allocation in elf_read_notes in elf.c.	binutils	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3725
287	CVE-2019-9075	Medium	HIGH	An issue was discovered in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.32. It is a heap-based buffer overflow in _bfd_archive_64_bit_slurp_armap in archive64.c.	binutils	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	10.19.45.1	Not vulnerable	LIN1018-3726
288	CVE-2019-9074	Medium	MEDIUM	An issue was discovered in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.32. It is an out-of-bounds read leading to a SEGV in bfd_getl32 in libbfd.c, when called from pex64_get_runtime_function in pei-x86_64.c.	binutils	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	10.19.45.1	Not vulnerable	LIN1018-3727
289	CVE-2019-9073	Medium	MEDIUM	An issue was discovered in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.32. It is an attempted excessive memory allocation in _bfd_elf_slurp_version_tables in elf.c.	binutils	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	10.19.45.1	Not vulnerable	LIN1018-3728
290	CVE-2019-9072	Medium	MEDIUM	An issue was discovered in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.32. It is an attempted excessive memory allocation in setup_group in elf.c.	binutils	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3729
291	CVE-2019-9071	Medium	MEDIUM	An issue was discovered in GNU libiberty, as distributed in GNU Binutils 2.32. It is a stack consumption issue in d_count_templates_scopes in cp-demangle.c after many recursive calls.	binutils	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	10.19.45.1	Not vulnerable	LIN1018-3730
292	CVE-2019-9070	Medium	HIGH	An issue was discovered in GNU libiberty, as distributed in GNU Binutils 2.32. It is a heap-based buffer over-read in d_expression_1 in cp-demangle.c after many recursive calls.	binutils	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3731
293	CVE-2019-9025	High	CRITICAL	An issue was discovered in PHP 7.3.x before 7.3.1. An invalid multibyte string supplied as an argument to the mb_split() function in ext/mbstring/php_mbregex.c can cause PHP to execute memcpy() with a negative argument, which could read and write past buffers allocated for the data.	php	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3690
294	CVE-2019-9024	Medium	HIGH	An issue was discovered in PHP before 5.6.40, 7.x before 7.1.26, 7.2.x before 7.2.14, and 7.3.x before 7.3.1. xmlrpc_decode() can allow a hostile XMLRPC server to cause PHP to read memory outside of allocated areas in base64_decode_xmlrpc in ext/xmlrpc/libxmlrpc/base64.c.	php	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3732
295	CVE-2019-9023	High	CRITICAL	An issue was discovered in PHP before 5.6.40, 7.x before 7.1.26, 7.2.x before 7.2.14, and 7.3.x before 7.3.1. A number of heap-based buffer over-read instances are present in mbstring regular expression functions when supplied with invalid multibyte data. These occur in ext/mbstring/oniguruma/regcomp.c, ext/mbstring/oniguruma/regexec.c, ext/mbstring/oniguruma/regparse.c, ext/mbstring/oniguruma/enc/unicode.c, and ext/mbstring/oniguruma/src/utf32_be.c when a multibyte regular expression pattern contains invalid multibyte sequences.	php	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3707
296	CVE-2019-9022	Medium	HIGH	An issue was discovered in PHP 7.x before 7.1.26, 7.2.x before 7.2.14, and 7.3.x before 7.3.2. dns_get_record misparses a DNS response, which can allow a hostile DNS server to cause PHP to misuse memcpy, leading to read operations going past the buffer allocated for DNS data. This affects php_parserr in ext/standard/dns.c for DNS_CAA and DNS_ANY queries.	php	Unchanged	Not vulnerable	Not vulnerable	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3705
297	CVE-2019-9021	High	CRITICAL	An issue was discovered in PHP before 5.6.40, 7.x before 7.1.26, 7.2.x before 7.2.14, and 7.3.x before 7.3.1. A heap-based buffer over-read in PHAR reading functions in the PHAR extension may allow an attacker to read allocated or unallocated memory past the actual data when trying to parse the file name, a different vulnerability than CVE-2018-20783. This is related to phar_detect_phar_fname_ext in ext/phar/phar.c.	php	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3691

	A	B	C	D	E	F	G	H	I	J	K	L	M
298	CVE-2019-9020	High	CRITICAL	An issue was discovered in PHP before 5.6.40, 7.x before 7.1.26, 7.2.x before 7.2.14, and 7.3.x before 7.3.1. Invalid input to the function xmlrpc_decode() can lead to an invalid memory access (heap out of bounds read or read after free). This is related to xml_elem_parse_buf in ext/xmlrpc/libxmlrpc/xml_element.c.	php	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3692
299	CVE-2019-9003	High	HIGH	In the Linux kernel before 4.20.5, attackers can trigger a drivers/char/ipmi/ipmi_msghandler.c use-after-free and OOPS by arranging for certain simultaneous execution of the code, as demonstrated by a service ipmievd restart loop.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3760
300	CVE-2019-8980	High	HIGH	A memory leak in the kernel_read_file function in fs/exec.c in the Linux kernel through 4.20.11 allows attackers to cause a denial of service (memory consumption) by triggering vfs_read failures.	linux	Unchanged	Not vulnerable	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3761
301	CVE-2019-8956	High	HIGH	In the Linux Kernel before versions 4.20.8 and 4.19.21 a use-after-free error in the sctp_sendmsg() function (net/sctp/socket.c) when handling SCTP_SENDALL flag can be exploited to corrupt memory.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3851
302	CVE-2019-8955	Medium	HIGH	In Tor before 0.3.3.12, 0.3.4.x before 0.3.4.11, 0.3.5.x before 0.3.5.8, and 0.4.x before 0.4.0.2-alpha, remote denial of service against Tor clients and relays can occur via memory exhaustion in the KIST cell scheduler.	tor	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3795
303	CVE-2019-8936	Medium	HIGH	NTP through 4.2.8p12 has a NULL Pointer Dereference.	ntp	Unchanged	8.0.0.31	Investigate	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4095
304	CVE-2019-8934	Low	LOW	hw/ppc/spapr.c in QEMU through 3.1.0 allows Information Exposure because the hypervisor shares the /proc/device-tree/system-id and /proc/device-tree/model system attributes with a guest.	qemu	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3779
305	CVE-2019-8912	High	HIGH	In the Linux kernel through 4.20.11, af_alg_release() in crypto/af_alg.c neglects to set a NULL value for a certain structure member, which leads to a use-after-free in sockfs_setattr.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.16	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3762
306	CVE-2019-8907	Medium	HIGH	do_core_note in readelf.c in libmagic.a in file 5.35 allows remote attackers to cause a denial of service (stack corruption and application crash) or possibly have unspecified other impact.	file	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3733
307	CVE-2019-8906	Medium	HIGH	do_core_note in readelf.c in libmagic.a in file 5.35 has an out-of-bounds read because memcpy is misused.	file	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3734
308	CVE-2019-8905	Medium	HIGH	do_core_note in readelf.c in libmagic.a in file 5.35 has a stack-based buffer over-read, related to file_printable, a different vulnerability than CVE-2018-10360.	file	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3735
309	CVE-2019-8904	Medium	HIGH	do_bid_note in readelf.c in libmagic.a in file 5.35 has a stack-based buffer over-read, related to file_printf and file_vprintf.	file	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3736
310	CVE-2019-8457	High	CRITICAL	SQLite3 from 3.6.0 to and including 3.27.2 is vulnerable to heap out-of-bound read in the rtreenode() function when handling invalid rtree tables.	sqlite	Unchanged	Vulnerable	9.0.0.22	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4249
311	CVE-2019-8381	Medium	HIGH	An issue was discovered in Tcpreplay 4.3.1. An invalid memory access occurs in do_checksum in checksum.c. It can be triggered by sending a crafted pcap file to the tcpreplay-edit binary. It allows an attacker to cause a Denial of Service (Segmentation fault) or possibly have unspecified other impact.	tcpreplay	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3771
312	CVE-2019-8377	Medium	HIGH	An issue was discovered in Tcpreplay 4.3.1. A NULL pointer dereference occurred in the function get_ipv6_l4proto() located at get.c. This can be triggered by sending a crafted pcap file to the tcpreplay-edit binary. It allows an attacker to cause a Denial of Service (Segmentation fault) or possibly have unspecified other impact.	tcpreplay	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3772
313	CVE-2019-8376	Medium	HIGH	An issue was discovered in Tcpreplay 4.3.1. A NULL pointer dereference occurred in the function get_layer4_v6() located at get.c. This can be triggered by sending a crafted pcap file to the tcpreplay-edit binary. It allows an attacker to cause a Denial of Service (Segmentation fault) or possibly have unspecified other impact.	tcpreplay	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3773
314	CVE-2019-8375	High	CRITICAL	The UIProcess subsystem in WebKit, as used in WebKitGTK through 2.23.90 and WebKitGTK+ through 2.22.6 and other products, does not prevent the script dialog size from exceeding the web view size, which allows remote attackers to cause a denial of service (Buffer Overflow) or possibly have unspecified other impact, related to UIProcess/API/gtk/WebKitScriptDialogGtk.cpp, UIProcess/API/gtk/WebKitScriptDialogImpl.cpp, and UIProcess/API/gtk/WebKitWebViewGtk.cpp, as demonstrated by GNOME Web (aka Epiphany).	webkitgtk	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	LIN1018-3800
315	CVE-2019-8358	Medium	HIGH	In Hiawatha before 10.8.4, a remote attacker is able to do directory traversal if AllowDotFiles is enabled.	hiawatha	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3796
316	CVE-2019-8357	Medium	MEDIUM	An issue was discovered in SoX 14.4.2. lsx_make_lpf in effect_i_dsp.c allows a NULL pointer dereference.	sox	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3746
317	CVE-2019-8356	Medium	MEDIUM	An issue was discovered in SoX 14.4.2. One of the arguments to bitrv2 in fft4g.c is not guarded, such that it can lead to write access outside of the statically declared array, aka a stack-based buffer overflow.	sox	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3747
318	CVE-2019-8355	Medium	MEDIUM	An issue was discovered in SoX 14.4.2. In xmalloc.h, there is an integer overflow on the result of multiplication fed into the lsx_valloc macro that wraps malloc. When the buffer is allocated, it is smaller than expected, leading to a heap-based buffer overflow in channels_start in remix.c.	sox	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3748
319	CVE-2019-8354	Medium	MEDIUM	An issue was discovered in SoX 14.4.2. lsx_make_lpf in effect_i_dsp.c has an integer overflow on the result of multiplication fed into malloc. When the buffer is allocated, it is smaller than expected, leading to a heap-based buffer overflow.	sox	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3749
320	CVE-2019-8343	Medium	HIGH	In Netwide Assembler (NASM) 2.14.02, there is a use-after-free in paste_tokens in asm/preproc.c.	nasm	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Investigate	Vulnerable	LIN1018-3788
321	CVE-2019-8337	MEDIUM	MEDIUM	In msmtp 1.8.2, when tls_trust_file has its default configuration, certificate-verification results are not properly checked.	msmtp	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3574

	A	B	C	D	E	F	G	H	I	J	K	L	M
322	CVE-2019-7739	Medium	MEDIUM	An issue was discovered in Joomla! before 3.9.3. The No Filtering textfilter overrides child settings in the Global Configuration. This is intended behavior. However, it might be unexpected for the user because the configuration dialog lacks an additional message to explain this.	dialog	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3591
323	CVE-2019-7733	Medium	HIGH	In Live555 0.95, there is a buffer overflow via a large integer in a Content-Length HTTP header because handleRequestBytes has an unrestricted memmove.	live555	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3586
324	CVE-2019-7732	Medium	HIGH	In Live555 0.95, a setup packet can cause a memory leak leading to DoS because, when there are multiple instances of a single field (username, realm, nonce, uri, or response), only the last instance can ever be freed.	live555	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3595
325	CVE-2019-7665	Medium	MEDIUM	In elfutils 0.175, a heap-based buffer over-read was discovered in the function elf32_xlatetom in elf32_xlatetom.c in libelf. A crafted ELF input can cause a segmentation fault leading to denial of service (program crash) because ebl_core_note does not reject malformed core file notes.	elfutils	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3512
326	CVE-2019-7664	Medium	MEDIUM	In elfutils 0.175, a negative-sized memcpy is attempted in elf_cvt_note in libelf/note_xlate.h because of an incorrect overflow check. Crafted elf input causes a segmentation fault, leading to denial of service (program crash).	elfutils	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3568
327	CVE-2019-7663	MEDIUM	MEDIUM	An Invalid Address dereference was discovered in TIFFWriteDirectoryTagTransferfunction in libtiff/tif_dirwrite.c in LibTIFF 4.0.10, affecting the cpSeparateBufToContigBuf function in tiffcp.c. Remote attackers could leverage this vulnerability to cause a denial-of-service via a crafted tiff file. This is different from CVE-2018-12900.	tiff	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	10.19.45.1	Not vulnerable	LIN1018-3501
328	CVE-2019-7659	MEDIUM	HIGH	Genivia gSOAP 2.7.x and 2.8.x before 2.8.75 allows attackers to cause a denial of service (application abort) or possibly have unspecified other impact if a server application is built with the -DWITH_COOKIES flag. This affects the C/C++ libgsoapck/libgsoapck++ and libgsoapssl/libgsoapssl++ libraries, as these are built with that flag.	gsoap	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3537
329	CVE-2019-7638	Medium	HIGH	SDL (Simple DirectMedia Layer) through 1.2.15 and 2.x through 2.0.9 has a heap-based buffer over-read in Map1toN in video/SDL_pixels.c.	libsdl	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3589
330	CVE-2019-7636	Medium	HIGH	SDL (Simple DirectMedia Layer) through 1.2.15 and 2.x through 2.0.9 has a heap-based buffer over-read in SDL_GetRGB in video/SDL_pixels.c.	libsdl	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3522

344	CVE-2019-7317	Low	MEDIUM	png_image_free in png.c in libpng 1.6.36 has a use-after-free because png_image_free_function is called under png_safe_execute.	libpng	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3558
345	CVE-2019-7314	High	CRITICAL	liblivemedia in Live555 before 2019.02.03 mishandles the termination of an RTSP stream after RTP/RTCP-over-RTSP has been set up, which could lead to a Use-After-Free error that causes the RTSP server to crash (Segmentation fault) or possibly have unspecified other impact.	live555	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	10.19.45.1	Not vulnerable	LIN1018-3551
346	CVE-2019-7310	Medium	HIGH	In Poppler 0.73.0, a heap-based buffer over-read (due to an integer signedness error in the XRef::getEntry function in XRef.cc) allows remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted PDF document, as demonstrated by pdftocairo.	poppler	Unchanged	Won't Fix	9.0.0.20	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3536
347	CVE-2019-7309	Low	MEDIUM	In the GNU C Library (aka glibc or libc6) through 2.29, the memcmp function for the x32 architecture can incorrectly return zero (indicating that the inputs are equal) because the RDX most significant bit is mishandled.	glibc	Unchanged	8.0.0.30	9.0.0.21	10.17.41.15	10.18.44.6	10.19.45.1	Not vulnerable	LIN1018-3534

	A	B	C	D	E	F	G	H	I	J	K	L	M
348	CVE-2019-7308	HIGH	CRITICAL	kernel/bpf/verifier.c in the Linux kernel before 4.20.6 performs undesirable out-of-bounds speculation on pointer arithmetic in various cases, including cases of different branches with different state or limits to sanitize, leading to side-channel attacks.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.7	Not vulnerable	Not vulnerable	LIN1018-3545
349	CVE-2019-7283	MEDIUM	MEDIUM	An issue was discovered in rcp in NetKit through 0.17. For an rcp operation, the server chooses which files/directories are sent to the client. However, the rcp client only performs cursory validation of the object name returned. A malicious rsh server (or Man-in-The-Middle attacker) can overwrite arbitrary files in a directory on the rcp client machine. This is similar to CVE-2019-6111.	netkit-rsh	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.5	10.19.45.1	Not vulnerable	LIN1018-3541
350	CVE-2019-7282	MEDIUM	MEDIUM	In NetKit through 0.17, rcp.c in the rcp client allows remote rsh servers to bypass intended access restrictions via the filename of . or an empty filename. The impact is modifying the permissions of the target directory on the client side. This is similar to CVE-2018-20685.	netkit-rsh	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.5	10.19.45.1	Not vulnerable	LIN1018-3510
351	CVE-2019-7222	LOW	MEDIUM	An information leakage issue was found in the way Linux kernel's KVM hypervisor handled page fault exception while emulating instructions like VMXON, VMCLEAR, VMPTRLD, VMWRITE with memory address as an operand. It occurs if the operand is an mmio address, as the returned exception object holds uninitialised stack memory Contents.	linux	Unchanged	8.0.0.30	9.0.0.21	10.17.41.15	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3553
352	CVE-2019-7221	MEDIUM	HIGH	A use after free issue was found in the way Linux kernel's KVM hypervisor emulates a preemption timer for L2 guest when nested(=1) virtualization is enabled. This high resolution timer(hrtimer) runs when L2 guest is active. After VM exit, in sync_vmcs12() timer object is stopped. The use-after-free occurs if the timer object is free'd before calling sync_vmcs12() routine.	linux	Unchanged	8.0.0.30	9.0.0.21	10.17.41.15	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3576
353	CVE-2019-7175	Medium	HIGH	In ImageMagick before 7.0.8-25, some memory leaks exist in DecodeImage in coders/pcd.c.	imagemagick	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3775
354	CVE-2019-7150	Medium	MEDIUM	An issue was discovered in elfutils 0.175. A segmentation fault can occur in the function elf64_xlatetom in libelf/elf32_xlatetom.c, due to dwfl_segment_report_module not checking whether the dyn data read from a core file is truncated. A crafted input can cause a program crash, leading to denial-of-service, as demonstrated by eu-stack.	elfutils	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3548
355	CVE-2019-7149	Medium	MEDIUM	A heap-based buffer over-read was discovered in the function read_srclines in dwarf_getsrclines.c in libdw in elfutils 0.175. A crafted input can cause segmentation faults, leading to denial-of-service, as demonstrated by eu-nm.	elfutils	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3563
356	CVE-2019-7148	Medium	MEDIUM	An attempted excessive memory allocation was discovered in the function read_long_names in elf_begin.c in libelf in elfutils 0.174. Remote attackers could leverage this vulnerability to cause a denial-of-service via crafted elf input, which leads to an out-of-memory exception.	elfutils	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3496
357	CVE-2019-7147	Medium	MEDIUM	A buffer over-read exists in the function crc64ib in crc64.c in nasmlib in Netwide Assembler (NASM) 2.14rc16. A crafted asm input can cause segmentation faults, leading to denial-of-service.	nasm	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	LIN1018-3509
358	CVE-2019-7146	Medium	MEDIUM	In elfutils 0.175, there is a buffer over-read in the ebl_object_note function in eblobjnote.c in libebl. Remote attackers could leverage this vulnerability to cause a denial-of-service via a crafted elf file, as demonstrated by eu-readelf.	elfutils	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3520
359	CVE-2019-6988	Medium	MEDIUM	An issue was discovered in OpenJPEG 2.3.0. It allows remote attackers to cause a denial of service (attempted excessive memory allocation) in opj_calloc in openjp2/opj_malloc.c, when called from opj_tcd_init_tile in openjp2/tcd.c, as demonstrated by the 64-bit opj_decompress.	openjpeg	Unchanged	Won't Fix	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3592
360	CVE-2019-6978	High	CRITICAL	The GD Graphics Library (aka LibGD) 2.2.5 has a double free in the gdImage*Ptr() functions in gd_gif_out.c, gd_jpeg.c, and gd_wbmp.c. NOTE: PHP is unaffected.	gd	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.5	10.19.45.1	Not vulnerable	LIN1018-3570
361	CVE-2019-6977	Medium	HIGH	gdImageColorMatch in gd_color_match.c in the GD Graphics Library (aka LibGD) 2.2.5, as used in the imagecolormatch function in PHP before 5.6.40, 7.x before 7.1.26, 7.2.x before 7.2.14, and 7.3.x before 7.3.1, has a heap-based buffer overflow. This can be exploited by an attacker who is able to trigger imagecolormatch calls with crafted image data.	php	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3562
362	CVE-2019-6974	MEDIUM	HIGH	A use after free issue was found in the way Linux kernel's KVM hypervisor implements its device control API. While creating a device via kvm_ioctl_create_device(), device holds a reference to a VM object, latter this reference is transferred to caller's file descriptor table. If such file descriptor was to be closed, reference count to the VM object could become zero, potentially leading to use-after-free issue latter.	linux	Unchanged	8.0.0.30	9.0.0.21	10.17.41.15	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3585
363	CVE-2019-6956	Medium	HIGH	An issue was discovered in Freeware Advanced Audio Decoder 2 (FAAD2) 2.8.8. It is a buffer over-read in ps_mix_phase in libfaad/ps_dec.c.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3546
364	CVE-2019-6799	Medium	MEDIUM	An issue was discovered in phpMyAdmin before 4.8.5. When the AllowArbitraryServer configuration setting is set to true, with the use of a rogue MySQL server, an attacker can read any file on the server that the web server's user can access. This is related to the mysql.allow_local_infile PHP configuration, and the inadvertent ignoring of options(MYSQLI_OPT_LOCAL_INFILE calls.	phpmyadmin	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3518
365	CVE-2019-6798	High	CRITICAL	An issue was discovered in phpMyAdmin before 4.8.5. A vulnerability was reported where a specially crafted username can be used to trigger a SQL injection attack through the designer feature.	phpmyadmin	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3594

	A	B	C	D	E	F	G	H	I	J	K	L	M
366	CVE-2019-6778	MEDIUM	HIGH	A heap buffer overflow issue was found in the SLiRP networking implementation of the QEMU emulator. It occurs in tcp_emu() routine while emulating Identification protocol and copying message data to a socket buffer.	qemu	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3555
367	CVE-2019-6706	Medium	HIGH	Lua 5.3.5 has a use-after-free in lua_upvaluejoin in lapi.c. For example, a crash outcome might be achieved by an attacker who is able to trigger a debug.upvaluejoin call in which the arguments have certain relationships.	lua	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	10.19.45.1	Not vulnerable	LIN1018-3527
368	CVE-2019-6502	High	CRITICAL	sc_context_create in ctx.c in libopensc in OpenSC 0.19.0 has a memory leak, as demonstrated by a call from eidenv.	opensc	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3524
369	CVE-2019-6501	LOW	MEDIUM	An out of bounds r/w access issue was found in the way QEMU handled inquiry request coming from a guest in scsi_handle_inquiry_reply(). A guest user/process could use this flaw to corrupt byte of QEMU process Memory.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3526
370	CVE-2019-6488	Medium	HIGH	The string component in the GNU C Library (aka glibc or libc6) through 2.28, when running on the x32 architecture, incorrectly attempts to use a 64-bit register for size_t in assembly codes, which can lead to a segmentation fault or possibly unspecified other impact, as demonstrated by a crash in __memmove_avx_unaligned_erms in sysdeps/x86_64/multiarch/memmove-vec-unaligned-erms.S during a memcpy.	glibc	Unchanged	8.0.0.30	9.0.0.21	10.17.41.15	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3495
371	CVE-2019-6486	High	HIGH	Go before 1.10.8 and 1.11.x before 1.11.5 mishandles P-521 and P-384 elliptic curves, which allows attackers to cause a denial of service (CPU consumption) or possibly conduct ECDH private key recovery attacks.	go	Unchanged	Not vulnerable	Not vulnerable	10.17.41.15	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3598
372	CVE-2019-6476	MEDIUM	HIGH	A defect in code added to support QNAME minimization can cause named to exit with an assertion failure if a forwarder returns a referral rather than resolving the query. This affects BIND versions 9.14.0 up to 9.14.6, and 9.15.0 up to 9.15.4.	bind	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Investigate	LIN1018-5143
373	CVE-2019-6475	MEDIUM	HIGH	Mirror zones are a BIND feature allowing recursive servers to pre-cache zone data provided by other servers. A mirror zone is similar to a zone of type secondary, except that its data is subject to DNSSEC validation before being used in answers, as if it had been looked up via traditional recursion, and when mirror zone data cannot be validated, BIND falls back to using traditional recursion instead of the mirror zone. However, an error in the validity checks for the incoming zone data can allow an on-path attacker to replace zone data that was validated with a configured trust anchor with forged data of the attacker's choosing. The mirror zone feature is most often used to serve a local copy of the root zone. If an attacker was able to insert themselves into the network path between a recursive server using a mirror zone and a root name server, this vulnerability could then be used to cause the recursive server to accept a copy of falsified root zone data. This affects BIND versions 9.14.0 up to 9.14.6, and 9.15.0 up to 9.15.4.	bind	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Investigate	LIN1018-5144
374	CVE-2019-6471	MEDIUM	MEDIUM	A race condition which may occur when discarding malformed packets can result in BIND exiting due to a REQUIRE assertion failure in dispatch.c. Versions affected: BIND 9.11.0 -> 9.11.7, 9.12.0 -> 9.12.4-P1, 9.14.0 -> 9.14.2. Also all releases of the BIND 9.13 development branch and version 9.15.0 of the BIND 9.15 development branch and BIND Supported Preview Edition versions 9.11.3-S1 -> 9.11.7-S1.	bind	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.12	10.19.45.1	Not vulnerable	LIN1018-5071
375	CVE-2019-6470	MEDIUM	HIGH	There had existed in one of the ISC BIND libraries a bug in a function that was used by dhcpd when operating in DHCPv6 mode. There was also a bug in dhcpd relating to the use of this function per its documentation, but the bug in the library function prevented this from causing any harm. All releases of dhcpd from ISC contain copies of this, and other, BIND libraries in combinations that have been tested prior to release and are known to not present issues like this. Some third-party packagers of ISC software have modified the dhcpd source, BIND source, or version matchup in ways that create the crash potential. Based on reports available to ISC, the crash probability is large and no analysis has been done on how, or even if, the probability can be manipulated by an attacker. Affects: Builds of dhcpd versions prior to version 4.4.1 when using BIND versions 9.11.2 or later, or BIND versions with specific bug fixes backported to them. ISC does not have access to comprehensive version lists for all repackagings of dhcpd that are vulnerable. In particular, builds from other vendors may also be affected. Operators are advised to consult their vendor documentation.	bind	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Investigate	LIN1019-3299
376	CVE-2019-6469	MEDIUM	HIGH	An error in the EDNS Client Subnet (ECS) feature for recursive resolvers can cause BIND to exit with an assertion failure when processing a response that has malformed RRSIGs. Versions affected: BIND 9.10.5-S1 -> 9.11.6-S1 of BIND 9 Supported Preview Edition.	bind	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-5082
377	CVE-2019-6468	MEDIUM	HIGH	In BIND Supported Preview Edition, an error in the nxdomain-redirect feature can occur in versions which support EDNS Client Subnet (ECS) features. In those versions which have ECS support, enabling nxdomain-redirect is likely to lead to BIND exiting due to assertion failure. Versions affected: BIND Supported Preview Edition version 9.10.5-S1 -> 9.11.5-S5. ONLY BIND Supported Preview Edition releases are affected.	bind	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-5075

There is an infinite loop in the function _arc_error_normalized in the file cairo-arc.c, related to _arc_max_angle_for_tolerance_normalized.	cairo	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	10.19.45.1	Not vulnerable	LIN1018-3565
380	CVE-2019-6461	Medium	MEDIUM	An issue was discovered in cairo 1.16.0. There is an assertion problem in the function _cairo_arc_in_direction in the file cairo-arc.c.	cairo	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	10.19.45.1	Not vulnerable	LIN1018-3554
381	CVE-2019-6454	MEDIUM	MEDIUM	An issue was discovered in sd-bus in systemd 239. bus_process_object() in libsystemd/sd-bus/bus-objects.c allocates a variable-length stack buffer for temporarily storing the object path of incoming D-Bus messages. An unprivileged local user can exploit this by sending a specially crafted message to PID1, causing the stack pointer to jump over the stack guard pages into an unmapped memory region and trigger a denial of service (systemd PID1 crash and kernel panic).	systemd	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3782
382	CVE-2019-6439	High	CRITICAL	examples/benchmark/tls_bench.c in a benchmark tool in wolfSSL through 3.15.7 has a heap-based buffer overflow.	wolfssl	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3588
383	CVE-2019-6293	MEDIUM	MEDIUM	An issue was discovered in the function mark_beginning_as_normal in nfa.c in flex 2.6.4. There is a stack exhaustion problem caused by the mark_beginning_as_normal function making recursive calls to itself in certain scenarios involving lots of '*' characters. Remote attackers could leverage this vulnerability to cause a denial-of-service.	flex	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	LIN1018-3388
384	CVE-2019-6291	MEDIUM	MEDIUM	An issue was discovered in the function expr6 in eval.c in Netwide Assembler (NASM) through 2.14.02. There is a stack exhaustion problem caused by the expr6 function making recursive calls to itself in certain scenarios involving lots of '!' or '+' or '-' characters. Remote attackers could leverage this vulnerability to cause a denial-of-service via a crafted asm file.	nasm	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Investigate	Investigate	LIN1018-3384
385	CVE-2019-6290	MEDIUM	MEDIUM	An infinite recursion issue was discovered in eval.c in Netwide Assembler (NASM) through 2.14.02. There is a stack exhaustion problem resulting from infinite recursion in the functions expr, rexp, bexpr and cexpr in certain scenarios involving lots of '(' characters. Remote attackers could leverage this vulnerability to cause a denial-of-service via a crafted asm file.	nasm	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Investigate	Investigate	LIN1018-3401
386	CVE-2019-6256	HIGH	CRITICAL	A Denial of Service issue was discovered in the LIVE555 Streaming Media libraries as used in Live555 Media Server 0.93. It can cause an RTSPServer crash in handleHTTPCmd_TunnelingPOST, when RTSP-over-HTTP tunneling is supported, via x-sessioncookie HTTP headers in a GET request and a POST request within the same TCP session. This occurs because of a call to an incorrect virtual function pointer in the readSocket function in GroupsockHelper.cpp.	live555	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3411
387	CVE-2019-6250	HIGH	HIGH	A pointer overflow, with code execution, was discovered in ZeroMQ libzmq (aka 0MQ) 4.2.x and 4.3.x before 4.3.1. A v2_decoder.cpp zmq::v2_decoder_t::size_ready integer overflow allows an authenticated attacker to overwrite an arbitrary amount of bytes beyond the bounds of a buffer, which can be leveraged to run arbitrary code on the target system. The memory layout allows the attacker to inject OS commands into a data structure located immediately after the problematic buffer (i.e., it is not necessary to use a typical buffer-overflow exploitation technique that changes the flow of control).	zeromq	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3413
388	CVE-2019-6133	MEDIUM	MEDIUM	In PolicyKit (aka polkit) 0.115, the start time protection mechanism can be bypassed because fork() is not atomic, and therefore authorization decisions are improperly cached. This is related to lack of uid checking in polkitbackend/polkitbackendinteractiveauthority.c.	polkit	Unchanged	Not vulnerable	9.0.0.20	10.17.41.14	10.18.44.4	10.19.45.1	Not vulnerable	LIN1018-3395
389	CVE-2019-6129	MEDIUM	HIGH	png_create_info_struct in png.c in libpng 1.6.36 has a memory leak, as demonstrated by pngcp.	libpng	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Won't Fix	Won't Fix	LIN1018-3378
390	CVE-2019-6128	MEDIUM	HIGH	The TIFFFdOpen function in tif_unix.c in LibTIFF 4.0.10 has a memory leak, as demonstrated by pal2rgb.	tiff	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	10.19.45.1	Not vulnerable	LIN1018-3397
391	CVE-2019-6116	MEDIUM	HIGH	It was discovered that the ghostscript /invalidaccess checks fail under certain conditions. An attacker could possibly exploit this to bypass the -dSAFER protection and, for example, execute arbitrary shell commands via a specially crafted PostScript document.	ghostscript	Unchanged	8.0.0.30	9.0.0.21	10.17.41.15	10.18.44.4	10.19.45.1	Not vulnerable	LIN1018-3559
392	CVE-2019-6111	MEDIUM	MEDIUM	OpenSSH has a vulnerability in the scp client utility. Due to the scp implementation being derived from 1983 rcp, the server chooses which files/directories are sent to the client. However, scp client only perform cursory validation of the object name returned (only directory traversal attacks are prevented). A malicious scp server can overwrite arbitrary files in the scp client target directory. If recursive operation (-r) is performed, the server can manipulate subdirectories as well (for example overwrite .ssh/authorized_keys).	openssh	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3394
393	CVE-2019-6110	MEDIUM	MEDIUM	OpenSSH has a vulnerability in the scp client utility. Due to accepting and displaying arbitrary stderr output from the scp server, a malicious server can manipulate the client output, for example to employ ANSI codes to hide additional files being transferred.	openssh	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3415

	A	B	C	D	E	F	G	H	I	J	K	L	M
394	CVE-2019-6109	MEDIUM	MEDIUM	OpenSSH has a vulnerability in the scp client utility. Due to missing character encoding in the progress display, the object name can be used to manipulate the client output, for example to employ ANSI codes to hide additional files being transferred.	openssh	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3392
395	CVE-2019-5953	High	CRITICAL	Buffer overflow in GNU Wget 1.20.1 and earlier allows remote attackers to cause a denial-of-service (DoS) or may execute an arbitrary code via unspecified vectors.	wget	Unchanged	8.0.0.31	Investigate	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4094
396	CVE-2019-5882	HIGH	CRITICAL	Irssi 1.1.x before 1.1.2 has a use after free when hidden lines are expired from the scroll buffer.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3377
397	CVE-2019-5815	MEDIUM	HIGH	Type confusion in xsltNumberFormatGetMultipleLevel prior to libxslt 1.1.33 could allow attackers to potentially exploit heap corruption via crafted XML data.	libxslt	Unchanged	8.0.0.32	9.0.0.25	10.17.41.19	10.18.44.14	10.19.45.3	Not vulnerable	LIN1019-3745
398	CVE-2019-5747	MEDIUM	HIGH	An issue was discovered in BusyBox through 1.30.0. An out of bounds read in udhcp components (consumed by the DHCP server, client, and/or relay) might allow a remote attacker to leak sensitive information from the stack by sending a crafted DHCP message. This is related to assurance of a 4-byte length when decoding DHCP_SUBNET. NOTE: this issue exists because of an incomplete fix for CVE-2018-20679.	busybox	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3374
399	CVE-2019-5736	HIGH	HIGH	runc through 1.0-rc6, as used in Docker before 18.09.2 and other products, allows attackers to overwrite the host runc binary (and consequently obtain host root access) by leveraging the ability to execute a command as root within one of these types of containers: (1) a new container with an attacker-controlled image, or (2) an existing container, to which the attacker previously had write access, that can be attached with docker exec. This occurs because of file-descriptor mishandling, related to /proc/self/exe.	runc	Unchanged	Not vulnerable	9.0.0.20	10.17.41.15	10.18.44.5	10.19.45.1	Not vulnerable	LIN1018-3597
400	CVE-2019-5721	MEDIUM	MEDIUM	In Wireshark 2.4.0 to 2.4.11, the ENIP dissector could crash. This was addressed in epan/dissectors/packet-enip.c by changing the memory-management approach so that a use-after-free is avoided.	wireshark	Unchanged	Vulnerable	9.0.0.20	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3383
401	CVE-2019-5719	MEDIUM	MEDIUM	In Wireshark 2.6.0 to 2.6.5 and 2.4.0 to 2.4.11, the ISAKMP dissector could crash. This was addressed in epan/dissectors/packet-isakmp.c by properly handling the case of a missing decryption data block.	wireshark	Unchanged	8.0.0.30	9.0.0.20	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3382
402	CVE-2019-5718	MEDIUM	MEDIUM	In Wireshark 2.6.0 to 2.6.5 and 2.4.0 to 2.4.11, the RTSE dissector and other ASN.1 dissectors could crash. This was addressed in epan/charsets.c by adding a get_t61_string length check.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3381
403	CVE-2019-5717	MEDIUM	MEDIUM	In Wireshark 2.6.0 to 2.6.5 and 2.4.0 to 2.4.11, the P_MUL dissector could crash. This was addressed in epan/dissectors/packet-p_mul.c by rejecting the invalid sequence number of zero.	wireshark	Unchanged	8.0.0.30	9.0.0.20	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3380
404	CVE-2019-5716	MEDIUM	MEDIUM	In Wireshark 2.6.0 to 2.6.5, the 6LoWPAN dissector could crash. This was addressed in epan/dissectors/packet-6lowpan.c by avoiding use of a TVB before its creation.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3410
405	CVE-2019-5489	LOW	MEDIUM	The mincore() implementation in mm/mincore.c in the Linux kernel through 4.19.13 allowed local attackers to observe page cache access patterns of other processes on the same system, potentially allowing sniffing of secret information. (Fixing this affects the output of the fincore program.) Limited remote exploitation may be possible, as demonstrated by latency differences in accessing public files from an Apache HTTP Server.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3403
406	CVE-2019-5482	High	CRITICAL	Heap buffer overflow in the TFTP protocol handler in cURL 7.19.4 to 7.65.3.	curl	Unchanged	8.0.0.31	9.0.0.24	10.17.41.18	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-5056
407	CVE-2019-5481	High	CRITICAL	Double-free vulnerability in the FTP-kerberos code in cURL 7.52.0 to 7.65.3.	curl	Unchanged	Not vulnerable	Not vulnerable	10.17.41.18	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-5055
408	CVE-2019-5459	MEDIUM	HIGH	An Integer underflow in VLC Media Player versions < 3.0.7 leads to an out-of-band read.	vlc	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4598
409	CVE-2019-5443	Medium	HIGH	A non-privileged user or program can put code and a config file in a known non-privileged path (under C:/usr/local/) that will make curl <= 7.65.1 automatically run the code (as an openssl engine) on invocation. If that curl is invoked by a privileged user it can do anything it wants.	curl	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4384
410	CVE-2019-5436	Medium	HIGH	A heap buffer overflow in the TFTP receiving code allows for DoS or arbitrary code execution in libcurl versions 7.19.4 through 7.64.1.	curl	Unchanged	8.0.0.31	Investigate	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4171
411	CVE-2019-5435	Medium	LOW	An integer overflow in curl's URL API results in a buffer overflow in libcurl 7.62.0 to and including 7.64.1.	curl	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4172
412	CVE-2019-5108	LOW	MEDIUM	An exploitable denial-of-service vulnerability exists in the Linux kernel prior to mainline 5.3. An attacker could exploit this vulnerability by triggering AP to send IAPP location updates for stations before the required authentication process has completed. This could lead to different denial-of-service scenarios, either by causing CAM table attacks, or by leading to traffic flapping if faking already existing clients in other nearby APs of the same wireless infrastructure. An attacker can forge Authentication and Association Request packets to trigger this vulnerability.	linux	Unchanged	Vulnerable	9.0.0.25	10.17.41.20	10.18.44.15	Not vulnerable	Not vulnerable	LIN1019-3880
413	CVE-2019-5094	Medium	MEDIUM	An exploitable code execution vulnerability exists in the quota file functionality of E2fsprogs 1.45.3. A specially crafted ext4 partition can cause an out-of-bounds write on the heap, resulting in code execution. An attacker can corrupt a partition to trigger this vulnerability.	e2fsprogs	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	10.19.45.1	Not vulnerable	LIN1018-5006
414	CVE-2019-5063	MEDIUM	HIGH	An exploitable heap buffer overflow vulnerability exists in the data structure persistence functionality of OpenCV 4.1.0. A specially crafted XML file can cause a buffer overflow, resulting in multiple heap corruptions and potential code execution. An attacker can provide a specially crafted file to trigger this vulnerability.	opencv	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3885

	A	B	C	D	E	F	G	H	I	J	K	L	M
415	CVE-2019-5062	LOW	MEDIUM	An exploitable denial-of-service vulnerability exists in the 802.11w security state handling for hostapd 2.6 connected clients with valid 802.11w sessions. By simulating an incomplete new association, an attacker can trigger a deauthentication against stations using 802.11w, resulting in a denial of service.	hostapd&wpa-supplicant	Unchanged	Investigate	Investigate	Investigate	Investigate	Not vulnerable	Investigate	LIN1019-3780
416	CVE-2019-5061	LOW	MEDIUM	An exploitable denial-of-service vulnerability exists in the hostapd 2.6, where an attacker could trigger AP to send IAPP location updates for stations, before the required authentication process has completed. This could lead to different denial of service scenarios, either by causing CAM table attacks, or by leading to traffic flapping if faking already existing clients in other nearby Aps of the same wireless infrastructure. An attacker can forge Authentication and Association Request packets to trigger this vulnerability.	hostapd&wpa-supplicant	Unchanged	Investigate	Investigate	Investigate	Investigate	Not vulnerable	Investigate	LIN1019-3779
417	CVE-2019-5060	Medium	HIGH	An exploitable code execution vulnerability exists in the XPM image rendering function of SDL2_image 2.0.4. A specially crafted XPM image can cause an integer overflow in the colorhash function, allocating too small of a buffer. This buffer can then be written out of bounds, resulting in a heap overflow, ultimately ending in code execution. An attacker can display a specially crafted image to trigger this vulnerability.	libsdl2-image	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4592
418	CVE-2019-5059	Medium	HIGH	An exploitable code execution vulnerability exists in the XPM image rendering functionality of SDL2_image 2.0.4. A specially crafted XPM image can cause an integer overflow, allocating too small of a buffer. This buffer can then be written out of bounds resulting in a heap overflow, ultimately ending in code execution. An attacker can display a specially crafted image to trigger this vulnerability.	libsdl2-image	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4593
419	CVE-2019-5058	Medium	HIGH	An exploitable code execution vulnerability exists in the XCF image rendering functionality of SDL2_image 2.0.4. A specially crafted XCF image can cause a heap overflow, resulting in code execution. An attacker can display a specially crafted image to trigger this vulnerability.	libsdl2-image	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4594
420	CVE-2019-5057	Medium	HIGH	An exploitable code execution vulnerability exists in the PCX image-rendering functionality of SDL2_image 2.0.4. A specially crafted PCX image can cause a heap overflow, resulting in code execution. An attacker can display a specially crafted image to trigger this vulnerability.	libsdl2-image	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4595
421	CVE-2019-5052	Medium	HIGH	An exploitable integer overflow vulnerability exists when loading a PCX file in SDL2_image 2.0.4. A specially crafted file can cause an integer overflow, resulting in too little memory being allocated, which can lead to a buffer overflow and potential code execution. An attacker can provide a specially crafted image file to trigger this vulnerability.	libsdl2-image	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4390
422	CVE-2019-5051	Medium	HIGH	An exploitable heap-based buffer overflow vulnerability exists when loading a PCX file in SDL2_image, version 2.0.4. A missing error handler can lead to a buffer overflow and potential code execution. An attacker can provide a specially crafted image file to trigger this vulnerability.	libsdl2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4391
423	CVE-2019-5018	Medium	HIGH	An exploitable use after free vulnerability exists in the window function functionality of Sqlite3 3.26.0. A specially crafted SQL command can cause a use after free vulnerability, potentially resulting in remote code execution. An attacker can send a malicious SQL command to trigger this vulnerability.	sqlite	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4063
424	CVE-2019-5010	MEDIUM	HIGH	An exploitable denial-of-service vulnerability exists in the X509 certificate parser of Python.org Python 2.7.11 / 3.7.2. A specially crafted X509 certificate can cause a NULL pointer dereference, resulting in a denial of service. An attacker can initiate or accept TLS connections using crafted certificates to trigger this vulnerability.	python	Unchanged	8.0.0.30	9.0.0.20	Investigate	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3502
425	CVE-2019-5008	Medium	HIGH	hw/sparc64/sun4u.c in QEMU 3.1.50 is vulnerable to a NULL pointer dereference, which allows the attacker to cause a denial of service via a device driver.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.7	Not vulnerable	Not vulnerable	LIN1018-3929
426	CVE-2019-3902	Medium	MEDIUM	A flaw was found in Mercurial before 4.9. It was possible to use symlinks and subrepositories to defeat Mercurial's path-checking logic and write files outside a repository.	mercurial	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4026
427	CVE-2019-3901	Low	MEDIUM	A race condition in perf_event_open() allows local attackers to leak sensitive data from setuid programs. As no relevant locks (in particular the cred_guard_mutex) are held during the ptrace_may_access() call, it is possible for the specified target task to perform an execve() syscall with setuid execution before perf_event_alloc() actually attaches to it, allowing an attacker to bypass the ptrace_may_access() check and the perf_event_exit_task(current) call that is performed in install_exec_creds() during privileged execve() calls. This issue affects kernel versions before 4.8.	linux	Unchanged	8.0.0.33	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4052
428	CVE-2019-3900	Medium	MEDIUM	An infinite loop issue was found in the vhost_net kernel module in Linux Kernel up to and including v5.1-rc6, while handling incoming packets in handle_rx(). It could occur if one end sends packets faster than the other end can process them. A guest user, maybe remote one, could use this flaw to stall the vhost_net kernel thread, resulting in a DoS scenario.	linux	Unchanged	Vulnerable	9.0.0.22	10.17.41.17	10.18.44.9	Not vulnerable	Not vulnerable	LIN1018-4041
429	CVE-2019-3896	High	HIGH	A double-free can happen in idr_remove_all() in lib/idr.c in the Linux kernel 2.6 branch. An unprivileged local attacker can use this flaw for a privilege escalation or for a system crash and a denial of service (DoS).	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4297

	A	B	C	D	E	F	G	H	I	J	K	L	M
430	CVE-2019-3887	Medium	MEDIUM	A flaw was found in the way KVM hypervisor handled x2APIC Machine Specific Rregister (MSR) access with nested(=1) virtualization enabled. In that, L1 guest could access L0's APIC register values via L2 guest, when 'virtualize x2APIC mode' is enabled. A guest could use this flaw to potentially crash the host kernel resulting in DoS issue. Kernel versions from 4.16 and newer are vulnerable to this issue.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4180
431	CVE-2019-3886	Medium	MEDIUM	An incorrect permissions check was discovered in libvirt 4.8.0 and above. The readonly permission was allowed to invoke APIs depending on the guest agent, which could lead to potentially disclosing unintended information or denial of service by causing libvirt to block.	libvirt	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3849
432	CVE-2019-3885	Medium	HIGH	A use-after-free flaw was found in pacemaker up to and including version 2.0.1 which could result in certain sensitive information to be leaked via the system logs.	pacemaker	Unchanged	Vulnerable	Vulnerable	Vulnerable	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3942
433	CVE-2019-3882	Medium	MEDIUM	A flaw was found in the Linux kernel's vfio interface implementation that permits violation of the user's locked memory limit. If a device is bound to a vfio driver, such as vfio-pci, and the local attacker is administratively granted ownership of the device, it may cause a system memory exhaustion and thus a denial of service (DoS). Versions 3.10, 4.14 and 4.18 are vulnerable.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4042
434	CVE-2019-3880	Medium	MEDIUM	A flaw was found in the way samba implemented an RPC endpoint emulating the Windows registry service API. An unprivileged attacker could use this flaw to create a new registry hive file anywhere they have unix permissions which could lead to creation of a new file in the Samba share. Versions before 4.8.11, 4.9.6 and 4.10.2 are vulnerable.	samba	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3886
435	CVE-2019-3870	Low	MEDIUM	A vulnerability was found in Samba from version (including) 4.9 to versions before 4.9.6 and 4.10.2. During the creation of a new Samba AD DC, files are created in a private subdirectory of the install location. This directory is typically mode 0700, that is owner (root) only access. However in some upgraded installations it will have other permissions, such as 0755, because this was the default before Samba 4.8. Within this directory, files are created with mode 0666, which is world-writable, including a sample krb5.conf, and the list of DNS names and servicePrincipalName values to update.	samba	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3887
436	CVE-2019-3863	Medium	HIGH	A flaw was found in libssh2 before 1.8.1. A server could send a multiple keyboard interactive response messages whose total length are greater than unsigned char max characters. This value is used as an index to copy memory causing in an out of bounds memory write error.	libssh2	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3737
437	CVE-2019-3862	Medium	CRITICAL	An out of bounds read flaw was discovered in libssh2 before 1.8.1 in the way SSH_MSG_CHANNEL_REQUEST packets with an exit status message and no payload are parsed. A remote attacker who compromises a SSH server may be able to cause a Denial of Service or read data in the client memory.	libssh2	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	10.19.45.1	Not vulnerable	LIN1018-3738
438	CVE-2019-3861	Medium	CRITICAL	An out of bounds read flaw was discovered in libssh2 before 1.8.1 in the way SSH packets with a padding length value greater than the packet length are parsed. A remote attacker who compromises a SSH server may be able to cause a Denial of Service or read data in the client memory.	libssh2	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	10.19.45.1	Not vulnerable	LIN1018-3739
439	CVE-2019-3860	Medium	CRITICAL	An out of bounds read flaw was discovered in libssh2 before 1.8.1 in the way SFTP packets with empty payloads are parsed. A remote attacker who compromises a SSH server may be able to cause a Denial of Service or read data in the client memory.	libssh2	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	10.19.45.1	Not vulnerable	LIN1018-3740
440	CVE-2019-3859	Medium	CRITICAL	An out of bounds read flaw was discovered in libssh2 before 1.8.1 in the _libssh2_packet_require and _libssh2_packet_requirev functions. A remote attacker who compromises a SSH server may be able to cause a Denial of Service or read data in the client memory.	libssh2	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	10.19.45.1	Not vulnerable	LIN1018-3741
441	CVE-2019-3858	Medium	CRITICAL	An out of bounds read flaw was discovered in libssh2 before 1.8.1 when a specially crafted SFTP packet is received from the server. A remote attacker who compromises a SSH server may be able to cause a Denial of Service or read data in the client memory.	libssh2	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	10.19.45.1	Not vulnerable	LIN1018-3742
442	CVE-2019-3857	Medium	HIGH	An integer overflow flaw which could lead to an out of bounds write was discovered in libssh2 before 1.8.1 in the way SSH_MSG_CHANNEL_REQUEST packets with an exit signal are parsed. A remote attacker who compromises a SSH server may be able to execute code on the client system when a user connects to the server.	libssh2	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3743
443	CVE-2019-3856	Medium	HIGH	An integer overflow flaw, which could lead to an out of bounds write, was discovered in libssh2 before 1.8.1 in the way keyboard prompt requests are parsed. A remote attacker who compromises a SSH server may be able to execute code on the client system when a user connects to the server.	libssh2	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3744
444	CVE-2019-3855	High	HIGH	An integer overflow flaw which could lead to an out of bounds write was discovered in libssh2 before 1.8.1 in the way packets are read from the server. A remote attacker who compromises a SSH server may be able to execute code on the client system when a user connects to the server.	libssh2	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3745
445	CVE-2019-3846	High	HIGH	A flaw that allowed an attacker to corrupt memory and possibly escalate privileges was found in the mwifiex kernel module while connecting to a malicious wireless network.	linux	Unchanged	Not vulnerable	9.0.0.22	10.17.41.17	10.18.44.9	Not vulnerable	Not vulnerable	LIN1018-4251

	A	B	C	D	E	F	G	H	I	J	K	L	M
446	CVE-2019-3842	Medium	HIGH	In systemd before v242-rc4, it was discovered that pam_systemd does not properly sanitize the environment before using the XDG_SEAT variable. It is possible for an attacker, in some particular configurations, to set a XDG_SEAT environment variable which allows for commands to be checked against polkit policies using the allow_active element rather than allow_any.	systemd	Unchanged	8.0.0.31	9.0.0.21	10.17.41.16	10.18.44.7	Not vulnerable	Not vulnerable	LIN1018-3885
447	CVE-2019-3840	Low	MEDIUM	A NULL pointer dereference flaw was discovered in libvirt before version 5.0.0 in the way it gets interface information through the QEMU agent. An attacker in a guest VM can use this flaw to crash libvirtd and cause a denial of service.	libvirt	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3810
448	CVE-2019-3839	Medium	HIGH	It was found that in ghostscript some privileged operators remained accessible from various places after the CVE-2019-6116 fix. A specially crafted PostScript file could use this flaw in order to, for example, have access to the file system outside of the constrains imposed by -dSAFER. Ghostscript versions before 9.27 are vulnerable.	ghostscript	Unchanged	Investigate	9.0.0.24	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4097
449	CVE-2019-3838	MEDIUM	MEDIUM	It was found that the forceput operator could be extracted from the DefineResource method in ghostscript before 9.27. A specially crafted PostScript file could use this flaw in order to, for example, have access to the file system outside of the constrains imposed by -dSAFER.	ghostscript	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	10.19.45.1	Not vulnerable	LIN1018-3750
450	CVE-2019-3836	Medium	HIGH	It was discovered in gnutls before version 3.6.7 upstream that there is an uninitialized pointer access in gnutls versions 3.6.3 or later which can be triggered by certain post-handshake messages.	gnutls	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3846
451	CVE-2019-3835	MEDIUM	MEDIUM	It was found that the superexec operator was available in the internal dictionary in ghostscript before 9.27. A specially crafted PostScript file could use this flaw in order to, for example, have access to the file system outside of the constrains imposed by -dSAFER.	ghostscript	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	10.19.45.1	Not vulnerable	LIN1018-3751
452	CVE-2019-3833	Medium	HIGH	Openwsman, versions up to and including 2.6.9, are vulnerable to infinite loop in process_connection() when parsing specially crafted HTTP requests. A remote, unauthenticated attacker can exploit this vulnerability by sending malicious HTTP request to cause denial of service to openwsman server.	openwsman	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3776
453	CVE-2019-3832	LOW	MEDIUM	It was discovered the fix for CVE-2018-19758 is not complete and it still allows to read beyond the limit of the buffer in function wav_write_header() in wav.c. Function wav_write_header() iterates through the `loops` array for an amount of times read from the file itself. However, this value is not correctly checked and the library can read beyond the limits of the `loops` array, possibly making the application crash.	libsndfile	Unchanged	Investigate	9.0.0.21	10.17.41.15	10.18.44.5	10.19.45.1	Not vulnerable	LIN1018-3578
454	CVE-2019-3831	High	HIGH	A vulnerability was discovered in vdsm, version 4.19 through 4.30.3 and 4.30.5 through 4.30.8. The systemd_run function exposed to the vdsm system user could be abused to execute arbitrary commands as root.	vdsm	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	New
455	CVE-2019-3829	Medium	HIGH	A vulnerability was found in gnutls versions from 3.5.8 before 3.6.7. A memory corruption (double free) vulnerability in the certificate verification API. Any client or server application that verifies X.509 certificates with GnuTLS 3.5.8 or later is affected.	gnutls	Unchanged	Not vulnerable	Not vulnerable	Vulnerable	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3809
456	CVE-2019-3827	Low	MEDIUM	An incorrect permission check in the admin backend in gvfs before version 1.39.4 was found that allows reading and modify arbitrary files by privileged users without asking for password when no authentication agent is running. This vulnerability can be exploited by malicious programs running under privileges of users belonging to the wheel group to further escalate its privileges by modifying system files without user's knowledge. Successful exploitation requires uncommon system configuration.	gvfs	Unchanged	Not vulnerable	Not vulnerable	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3792
457	CVE-2019-3825	Medium	MEDIUM	A vulnerability was discovered in gdm before 3.31.4. When timed login is enabled in configuration, an attacker could bypass the lock screen by selecting the timed login user and waiting for the timer to expire, at which time they would gain access to the logged-in user's session.	gdm	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-8067
458	CVE-2019-3824	Medium	MEDIUM	A flaw was found in the way an LDAP search expression could crash the shared LDAP server process of a samba AD DC in samba before version 4.10. An authenticated user, having read permissions on the LDAP server, could use this flaw to cause denial of service.	samba	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3780
459	CVE-2019-3823	High	CRITICAL	libcurl versions from 7.34.0 to before 7.64.0 are vulnerable to a heap out-of-bounds read in the code handling the end-of-response for SMTP. If the buffer passed to `smtp_endofresp()` isn't NUL terminated and contains no character ending the parsed number, and `len` is set to 5, then the `strtol()` call reads beyond the allocated buffer. The read contents will not be returned to the caller.	curl	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3552
460	CVE-2019-3822	HIGH	CRITICAL	libcurl versions from 7.36.0 to before 7.64.0 are vulnerable to a stack-based buffer overflow. The function creating an outgoing NTLM type-3 header (`lib/vauth/ntlm.c:Curl_auth_create_ntlm_type3_message()`), generates the request HTTP header contents based on previously received data. The check that exists to prevent the local buffer from getting overflowed is implemented wrongly (using unsigned math) and as such it does not prevent the overflow from happening. This output data can grow larger than the local buffer if very large 'nt response' data is extracted from a previous NTLMv2 header provided by the malicious or broken HTTP server. Such a 'large value' needs to be around 1000 bytes or more. The actual payload data copied to the target buffer comes from the NTLMv2 type-2 response header.	curl	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3596

	A	B	C	D	E	F	G	H	I	J	K	L	M
461	CVE-2019-3821	MEDIUM	HIGH	A flaw was found in the way civetweb frontend was handling requests for ceph RGW server with SSL enabled. An unauthenticated attacker could create multiple connections to ceph RADOS gateway to exhaust file descriptors for ceph-radosgw service resulting in a remote denial of service.	ceph	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3807
462	CVE-2019-3819	Medium	MEDIUM	A flaw was found in the Linux kernel in the function hid_debug_events_read() in drivers/hid/hid-debug.c file which may enter an infinite loop with certain parameters passed from a userspace. A local privileged user (root) can cause a system lock up and a denial of service. Versions from v4.18 and newer are vulnerable.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3519
463	CVE-2019-3817	Medium	HIGH	A use-after-free flaw has been discovered in libcomps before version 0.1.10 in the way ObjMRTrees are merged. An attacker, who is able to make an application read a crafted comps XML file, may be able to crash the application or execute malicious code.	libcomps	Unchanged	Not vulnerable	Not vulnerable	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3808
464	CVE-2019-3816	Medium	HIGH	Openwsman, versions up to and including 2.6.9, are vulnerable to arbitrary file disclosure because the working directory of openwsmand daemon was set to root directory. A remote, unauthenticated attacker can exploit this vulnerability by sending a specially crafted HTTP request to openwsman server.	openwsman	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3777
465	CVE-2019-3815	Low	LOW	A memory leak was discovered in the backport of fixes for CVE-2018-16864 in Red Hat Enterprise Linux. Function dispatch_message_real() in journald-server.c does not free the memory allocated by set_iovec_field_free() to store the `_CMDLINE=` entry. A local attacker may use this flaw to make systemd-journald crash. This issue only affects versions shipped with Red Hat Enterprise since v219-62.2.	systemd	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3533
466	CVE-2019-3814	Medium	MEDIUM	It was discovered that Dovecot before versions 2.2.36.1 and 2.3.4.1 incorrectly handled client certificates. A remote attacker in possession of a valid certificate with an empty username field could possibly use this issue to impersonate other users.	dovecot	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	10.19.45.1	Not vulnerable	LIN1018-3811
467	CVE-2019-3813	Medium	HIGH	Spice, versions 0.5.2 through 0.14.1, are vulnerable to an out-of-bounds read due to an off-by-one error in memslot_get_virt. This may lead to a denial of service, or, in the worst case, code-execution by unauthenticated attackers.	spice	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.5	10.19.45.1	Not vulnerable	LIN1018-3567
468	CVE-2019-3812	Low	MEDIUM	QEMU, through version 2.10 and through version 3.1.0, is vulnerable to an out-of-bounds read of up to 128 bytes in the hw/i2c/i2c-ddc.c:i2c_ddc() function. A local attacker with permission to execute i2c commands could exploit this to read stack memory of the qemu process on the host.	qemu	Unchanged	Not vulnerable	9.0.0.21	10.17.41.15	10.18.44.5	10.19.45.1	Not vulnerable	LIN1018-3651
469	CVE-2019-3811	LOW	MEDIUM	An issue was found in SSSD. The default option for fallback_homedir returns '/' for empty home directories in the passwd file.	sssd	Unchanged	Not vulnerable	Won't Fix	Won't Fix	10.18.44.15	Not vulnerable	Not vulnerable	LIN1018-3417
470	CVE-2019-3805	Medium	MEDIUM	A flaw was discovered in wildfly versions up to 16.0.0.Final that would allow local users who are able to execute init.d script to terminate arbitrary processes on the system. An attacker could exploit this by modifying the PID file in /var/run/jboss-eap/ allowing the init.d script to terminate any process as root.	wildfly	Unchanged	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-10880
471	CVE-2019-3701	HIGH	MEDIUM	An issue was discovered in can_can_gw_rcv in net/can/gw.c in the Linux kernel through 4.19.13. The CAN frame modification rules allow bitwise logical operations that can be also applied to the can_dlc field. Because of a missing check, the CAN drivers may write arbitrary content beyond the data registers in the CAN controller's I/O memory when processing can-gw manipulated outgoing frames. This is related to cgw_csum_xor_rel. An unprivileged user can trigger a system crash (general protection fault).	linux	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3399
472	CVE-2019-3462	HIGH	HIGH	Incorrect sanitation of the 302 redirect field in HTTP transport method of apt versions 1.4.8 and earlier can lead to content injection by a MITM attacker, potentially leading to remote code execution on the target machine.	apt	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.5	Investigate	Not vulnerable	LIN1018-3584
473	CVE-2019-3460	LOW	MEDIUM	A flaw was found in the Linux kernels implementation of Logical link control and adaptation protocol (L2CAP), part of the bluetooth stack in the l2cap_parse_conf_rsp, l2cap_parse_conf_req functions.	linux	Unchanged	8.0.0.31	9.0.0.21	10.17.41.16	10.18.44.7	Not vulnerable	Not vulnerable	LIN1018-3387
474	CVE-2019-3459	LOW	MEDIUM	A flaw was found in the Linux kernels implementation of Logical link control and adaptation protocol (L2CAP), part of the bluetooth stack.	linux	Unchanged	8.0.0.31	9.0.0.21	10.17.41.16	10.18.44.7	Not vulnerable	Not vulnerable	LIN1018-3400
475	CVE-2019-3018	LOW	MEDIUM	Vulnerability in the MySQL Server product of Oracle MySQL (component: InnoDB). Supported versions that are affected are 8.0.17 and prior. Difficult to exploit vulnerability allows high privileged attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS 3.0 Base Score 4.4 (Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:H/PR:H/UI:N/S:U/C:N/I:N/A:H).	mysql	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-5133
476	CVE-2019-3016	LOW	MEDIUM	In a Linux KVM guest that has PV TLB enabled, a process in the guest kernel may be able to read memory locations from another process in the same guest. This problem is limit to the host running linux kernel 4.10 with a guest running linux kernel 4.16 or later. The problem mainly affects AMD processors but Intel CPUs cannot be ruled out.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.20	10.18.44.15	Investigate	Investigate	LIN1019-4048

514	CVE-2019-2933	MEDIUM	LOW	Vulnerability in the Java SE, Java SE Embedded product of Oracle Java SE (component: Libraries). Supported versions that are affected are Java SE: 7u231, 8u221, 11.0.4 and 13; Java SE Embedded: 8u221. Difficult to exploit vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE, Java SE Embedded. Successful attacks require human interaction from a person other than the attacker. Successful attacks of this vulnerability can result in unauthorized read access to a subset of Java SE, Java SE Embedded accessible data. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets (in Java SE 8), that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability can also be exploited by using APIs in the specified Component, e.g., through a web service which supplies data to the APIs. CVSS 3.0 Base Score 3.1 (Confidentiality impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:H/PR:N/UI:R/S:U/C:L/I:N/A:N).	jdk&jre	Unchanged	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-11641
515	CVE-2019-2924	MEDIUM	MEDIUM	Vulnerability in the MySQL Server product of Oracle MySQL (component: Server: Security: Encryption). Supported versions that are affected are 5.6.45 and prior and 5.7.27 and prior. Easily exploitable vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized read access to a subset of MySQL Server accessible data. CVSS 3.0 Base Score 5.3 (Confidentiality impacts). 549	CVE-2019-2786	Low	LOW	Vulnerability in the Java SE, Java SE Embedded component of Oracle Java SE (subcomponent: Security). Supported versions that are affected are Java SE: 8u212, 11.0.3 and 12.0.1; Java SE Embedded: 8u211. Difficult to exploit vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE, Java SE Embedded. Successful attacks require human interaction from a person other than the attacker and while the vulnerability is in Java SE, Java SE Embedded, attacks may significantly impact additional products. Successful attacks of this vulnerability can result in unauthorized read access to a subset of Java SE, Java SE Embedded accessible data. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets (in Java SE 8), that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability can also be exploited by using APIs in the specified Component, e.g., through a web service which supplies data to the APIs. CVSS 3.0 Base Score 3.4 (Confidentiality impacts). 585	CVE-2019-2684	Medium	MEDIUM	Vulnerability in the Java SE, Java SE Embedded component of Oracle Java SE (subcomponent: RMI). Supported versions that are affected are Java SE: 7u211, 8u202, 11.0.2 and 12; Java SE Embedded: 8u201. Difficult to exploit vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE, Java SE Embedded. Successful attacks of this vulnerability can result in unauthorized creation, deletion or modification access to critical data or all Java SE, Java SE Embedded accessible data. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets (in Java SE 8), that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability can also be exploited by using APIs in the specified Component, e.g., through a web service which supplies data to the APIs. CVSS 3.0 Base Score 5.9 (Integrity impacts). 651	CVE-2019-20503	MEDIUM	MEDIUM	usrsctp before 2019-12-20 has out-of-bounds reads in sctp_load_addresses_from_init.	usrsctp	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4119
652	CVE-2019-20485	LOW	MEDIUM	qemu/qemu_driver.c in libvirt before 6.0.0 mishandles the holding of a monitor job during a query to a guest agent, which allows attackers to cause a denial of service (API blockage).	libvirt	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.6	Not vulnerable	LIN1019-4155
653	CVE-2019-20477	HIGH	CRITICAL	PyYAML 5.1 through 5.1.2 has insufficient restrictions on the load and load_all functions because of a class deserialization issue, e.g., Popen is a class in the subprocess module. NOTE: this issue exists because of an incomplete fix for CVE-2017-18342.	python-pyyaml	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4064
654	CVE-2019-20454	MEDIUM	HIGH	An out-of-bounds read was discovered in PCRE before 10.34 when the pattern \X is JIT compiled and used to match specially crafted subjects in non-UTF mode. Applications that use PCRE to parse untrusted input may be vulnerable to this flaw, which would allow an attacker to crash the application. The flaw occurs in do_extuni_no_utf in pcre2_jit_compile.c.	pcre	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.15	10.19.45.5	Not vulnerable	LIN1019-4063
655	CVE-2019-20446	MEDIUM	MEDIUM	In xml.rs in GNOME librsvg before 2.46.2, a crafted SVG file with nested patterns can cause denial of service when passed to the library for processing. The attacker constructs pattern elements so that the number of final rendered objects grows exponentially.	librsvg	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Investigate	LIN1019-4003
656	CVE-2019-20433	MEDIUM	CRITICAL	libaspell.a in GNU Aspell before 0.60.8 has a buffer over-read for a string ending with a single '0' byte, if the encoding is set to ucs-2 or ucs-4 outside of the application, as demonstrated by the ASPELL_CONF environment variable.	aspell	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.6	Not vulnerable	LIN1019-3983

	A	B	C	D	E	F	G	H	I	J	K	L	M
657	CVE-2019-20422	LOW	MEDIUM	In the Linux kernel before 5.3.4, fib6_rule_lookup in net/ipv6/ip6_fib.c mishandles the RT6_LOOKUP_F_DST_NOREF flag in a reference-count decision, leading to (for example) a crash that was identified by syzkaller, aka CID-7b09c2d052db.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1019-3984
658	CVE-2019-20388	MEDIUM	HIGH	xmlSchemaPreRun in xmlschemas.c in libxml2 2.9.10 allows an xmlSchemaValidateStream memory leak.	libxml2	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.5	10.20.9.0	LIN1019-3965
659	CVE-2019-20387	MEDIUM	HIGH	repodata_schema2id in repodata.c in libsolv before 0.7.6 has a heap-based buffer over-read via a last schema whose length is less than the length of the input schema.	libsolv	Unchanged	Not vulnerable	9.0.0.25	10.17.41.20	10.18.44.14	Not vulnerable	Not vulnerable	LIN1019-3968
660	CVE-2019-20386	LOW	LOW	An issue was discovered in button_open in login/logind-button.c in systemd before 243. When executing the udevadm trigger command, a memory leak may occur.	systemd	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.14	Not vulnerable	Not vulnerable	LIN1019-3967
661	CVE-2019-20382	MEDIUM	MEDIUM	QEMU 4.1.0 has a memory leak in zrle_compress_data in ui/vnc-enc-zrle.c during a VNC disconnect operation because libz is misused, resulting in a situation where memory allocated in deflateInit2 is not freed in deflateEnd.	qemu	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.6	10.20.12.0	LIN1019-4116
662	CVE-2019-20372	MEDIUM	MEDIUM	NGINX before 1.17.7, with certain error_page configurations, allows HTTP request smuggling, as demonstrated by the ability of an attacker to read unauthorized web pages in environments where NGINX is being fronted by a load balancer.	nginx	Unchanged	8.0.0.33	9.0.0.25	Won't Fix	10.18.44.15	10.19.45.6	Won't Fix	LIN1019-3910
663	CVE-2019-20367	MEDIUM	CRITICAL	nlist.c in libbsd before 0.10.0 has an out-of-bounds read during a comparison for a symbol name from the string table (strtab).	libbsd	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	Not vulnerable	Not vulnerable	LIN1019-3902
664	CVE-2019-20352	MEDIUM	HIGH	In Netwide Assembler (NASM) 2.15rc0, a heap-based buffer over-read occurs (via a crafted .asm file) in set_text_free when called from expand_one_smacro in asm/preproc.c.	nasm	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Investigate	LIN1019-3891
665	CVE-2019-20334	MEDIUM	MEDIUM	In Netwide Assembler (NASM) 2.14.02, stack consumption occurs in expr# functions in asm/eval.c. This potentially affects the relationships among expr0, expr1, expr2, expr3, expr4, expr5, and expr6 (and stdscan in asm/stdscan.c). This is similar to CVE-2019-6290 and CVE-2019-6291.	nasm	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Investigate	LIN1019-3887
666	CVE-2019-20326	MEDIUM	HIGH	A heap-based buffer overflow in _cairo_image_surface_create_from_jpeg( ) in extensions/cairo_io/cairo-image-surface-jpeg.c in GNOME gThumb before 3.8.3 and Linux Mint Pix before 2.4.5 allows attackers to cause a crash and potentially execute arbitrary code via a crafted JPEG file.	gthumb	Unchanged	Investigate	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-9699
667	CVE-2019-20218	MEDIUM	HIGH	selectExpander in select.c in SQLite 3.30.1 proceeds with WITH stack unwinding even after a parsing error.	sqlite	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.14	10.19.45.3	10.20.6.0	LIN1019-3882
668	CVE-2019-20176	MEDIUM	HIGH	In Pure-FTPd 1.0.49, a stack exhaustion issue was discovered in the listdir function in ls.c.	pure-ftpd	Unchanged	8.0.0.33	9.0.0.25	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3916
669	CVE-2019-20175	MEDIUM	HIGH	** DISPUTED ** An issue was discovered in ide_dma_cb() in hw/ide/core.c in QEMU 2.4.0 through 4.2.0. The guest system can crash the QEMU process in the host system via a special SCSI_IOCTL_SEND_COMMAND. It hits an assertion that implies that the size of successful DMA transfers there must be a multiple of 512 (the size of a sector). NOTE: a member of the QEMU security team disputes the significance of this issue because a privileged guest user has many ways to cause similar DoS effect, without triggering this assert.	qemu	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.16	10.19.45.6	Investigate	LIN1019-3886
670	CVE-2019-20096	MEDIUM	MEDIUM	In the Linux kernel before 5.1, there is a memory leak in __feat_register_sp() in net/dccp/feat.c, which may cause denial of service, aka CID-1d3ff0950e2b.	linux	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.14	Not vulnerable	Not vulnerable	LIN1019-3869
671	CVE-2019-20095	MEDIUM	MEDIUM	mwifiex_tm_cmd in drivers/net/wireless/marvell/mwifiex/cfg80211.c in the Linux kernel before 5.1.6 has some error-handling cases that did not free allocated hostcmd memory, aka CID-003b686ace82. This will cause a memory leak and denial of service.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.20	Not vulnerable	Not vulnerable	Not vulnerable	LIN1019-3870
672	CVE-2019-20079	HIGH	CRITICAL	The autocmd feature in window.c in Vim before 8.1.2136 accesses freed memory.	vim	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1019-3871
673	CVE-2019-20054	MEDIUM	MEDIUM	In the Linux kernel before 5.0.6, there is a NULL pointer dereference in drop_sysctl_table() in fs/proc/proc_sysctl.c, related to put_links, aka CID-23da9588037e.	linux	Updated	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	Not vulnerable	Not vulnerable	LIN1019-3872
674	CVE-2019-20044	HIGH	HIGH	In Zsh before 5.8, attackers able to execute commands can regain privileges dropped by the --no-PRIVILEGED option. Zsh fails to overwrite the saved uid, so the original privileges can be restored by executing MODULE_PATH=/dir/with/module zmodload with a module that calls setuid().	zsh	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4074
675	CVE-2019-19977	HIGH	CRITICAL	libESMTP through 1.0.6 mishandles domain copying into a fixed-size buffer in ntlm_build_type_2 in ntlm/ntlmstruct.c, as demonstrated by a stack-based buffer over-read.	libesmtp	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3863
676	CVE-2019-19966	LOW	MEDIUM	In the Linux kernel before 5.1.6, there is a use-after-free in cpia2_exit() in drivers/media/usb/cpia2/cpia2_v4l.c that will cause denial of service, aka CID-dea37a972655.	linux	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	Not vulnerable	Not vulnerable	Not vulnerable	LIN1019-3850
677	CVE-2019-19965	LOW	MEDIUM	In the Linux kernel through 5.4.6, there is a NULL pointer dereference in drivers/scsi/libsas/sas_discover.c because of mishandling of port disconnection during discovery, related to a PHY down race condition, aka CID-f70267f379b5.	linux	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.14	10.19.45.4	Not vulnerable	LIN1019-3851
678	CVE-2019-19963	MEDIUM	MEDIUM	An issue was discovered in wolfSSL before 4.3.0 in a non-default configuration where DSA is enabled. DSA signing uses the BEEA algorithm during modular inversion of the nonce, leading to a side-channel attack against the nonce.	wolfssl	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3852
679	CVE-2019-19962	MEDIUM	HIGH	wolfSSL before 4.3.0 mishandles calls to wc_SignatureGenerateHash, leading to fault injection in RSA cryptography.	wolfssl	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3853
680	CVE-2019-19960	MEDIUM	MEDIUM	In wolfSSL before 4.3.0, wc_ecc_mulmod_ex does not properly resist side-channel attacks.	wolfssl	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3854

686	CVE-2019-19947	LOW	MEDIUM	In the Linux kernel through 5.4.6, there are information leaks of uninitialized memory to a USB device in the drivers/net/can/usb/kvaser_usb/kvaser_usb_leaf.c driver, aka CID-da2311a6385c.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.4	Not vulnerable	LIN1019-3841
687	CVE-2019-19927	LOW	HIGH	In the Linux kernel 5.0.0-rc7 (as distributed in ubuntu/linux.git on kernel.ubuntu.com), mounting a crafted f2fs filesystem image and performing some operations can lead to slab-out-of-bounds read access in ttm_put_pages in drivers/gpu/drm/ttm/ttm_page_alloc.c. This is related to the vmwgfx or ttm module.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.14	Not vulnerable	Not vulnerable	LIN1019-3881
688	CVE-2019-19926	MEDIUM	HIGH	multiSelect in select.c in SQLite 3.30.1 mishandles certain errors during parsing, as demonstrated by errors from sqlite3WindowRewrite() calls. NOTE: this vulnerability exists because of an incomplete fix for CVE-2019-19880.	sqlite	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.14	10.19.45.3	10.20.6.0	LIN1019-3825
689	CVE-2019-19925	MEDIUM	HIGH	zipfileUpdate in ext/misc/zipfile.c in SQLite 3.30.1 mishandles a NULL pathname during an update of a ZIP archive.	sqlite	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.14	10.19.45.3	10.20.6.0	LIN1019-3855
690	CVE-2019-19924	MEDIUM	MEDIUM	SQLite 3.30.1 mishandles certain parser-tree rewriting, related to expr.c, vdbeaux.c, and window.c. This is caused by incorrect sqlite3WindowRewrite() error handling.	sqlite	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.14	10.19.45.3	10.20.6.0	LIN1019-3856
691	CVE-2019-19923	MEDIUM	HIGH	flattenSubquery in select.c in SQLite 3.30.1 mishandles certain uses of SELECT DISTINCT involving a LEFT JOIN in which the right-hand side is a view. This can cause a NULL pointer dereference (or incorrect results).	sqlite	Unchanged	Not vulnerable	Not vulnerable	10.17.41.20	10.18.44.14	10.19.45.3	10.20.6.0	LIN1019-3857
692	CVE-2019-19922	LOW	MEDIUM	kernel/sched/fair.c in the Linux kernel before 5.3.9, when cpu.cfs_quota_us is used (e.g., with Kubernetes), allows attackers to cause a denial of service against non-cpu-bound applications by generating a workload that triggers unwanted slice expiration, aka CID-de53fd7aedb1. (In other words, although this slice expiration would typically be seen with benign workloads, it is possible that an attacker could calculate how many stray requests are required to force an entire Kubernetes cluster into a low-performance state caused by slice expiration, and ensure that a DDoS attack sent that number of stray requests. An attack does not affect the stability of the kernel; it only causes mismanagement of application execution.)	linux	Unchanged	Investigate	Investigate	Investigate	Investigate	10.19.45.3	Not vulnerable	LIN1019-3826
693	CVE-2019-19921	MEDIUM	HIGH	runc through 1.0.0-rc9 has Incorrect Access Control leading to Escalation of Privileges, related to libcontainer/rootfs_linux.go. To exploit this, an attacker must be able to spawn two containers with custom volume-mount configurations, and be able to run custom images. (This vulnerability does not affect Docker due to an implementation detail that happens to block the attack.)	runc-opencontainers	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4041
694	CVE-2019-19906	MEDIUM	HIGH	cyrus-sasl (aka Cyrus SASL) 2.1.27 has an out-of-bounds write leading to unauthenticated remote denial-of-service in OpenLDAP via a malformed LDAP packet. The OpenLDAP crash is ultimately caused by an off-by-one error in _sasl_add_string in common.c in cyrus-sasl.	cyrus-sasl	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.5	10.20.12.0	LIN1019-3823
695	CVE-2019-19882	MEDIUM	HIGH	shadow 4.8, in certain circumstances affecting at least Gentoo, Arch Linux, and Void Linux, allows local users to obtain root access because setuid programs are misconfigured. Specifically, this affects shadow 4.8 when compiled using --with-libpam but without explicitly passing --disable-account-tools-setuid, and without a PAM configuration suitable for use with setuid account management tools. This combination leads to account management tools (groupadd, groupdel, groupmod, useradd, userdel, usermod) that can easily be used by unprivileged local users to escalate privileges to root in multiple ways. This issue became much more relevant in approximately December 2019 when an unrelated bug was fixed (i.e., the chmod calls to suidusbins were fixed in the upstream Makefile which is now included in the release version 4.8).	shadow	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.14	10.19.45.3	10.20.3.0	LIN1019-3811
696	CVE-2019-19880	MEDIUM	HIGH	exprListAppendList in window.c in SQLite 3.30.1 allows attackers to trigger an invalid pointer dereference because constant integer values in ORDER BY clauses of window definitions are mishandled.	sqlite	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.3	10.20.6.0	LIN1019-3812
697	CVE-2019-19816	HIGH	HIGH	In the Linux kernel 5.0.21, mounting a crafted btrfs filesystem image and performing some operations can cause slab-out-of-bounds write access in __btrfs_map_block in fs/btrfs/volumes.c, because a value of 1 for the number of data stripes is mishandled.	linux	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	LIN1019-3797
698	CVE-2019-19815	HIGH	MEDIUM	In the Linux kernel 5.0.21, mounting a crafted f2fs filesystem image can cause a NULL pointer dereference in f2fs_recover_fsync_data in fs/f2fs/recovery.c. This is related to F2FS_P_SB in fs/f2fs/f2fs.h.	linux	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	LIN1019-3798

	A	B	C	D	E	F	G	H	I	J	K	L	M
699	CVE-2019-19814	HIGH	HIGH	In the Linux kernel 5.0.21, mounting a crafted f2fs filesystem image can cause __remove_dirty_segment slab-out-of-bounds write access because an array is bounded by the number of dirty types (8) but the array index can exceed this.	linux	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	LIN1019-3799
700	CVE-2019-19813	HIGH	HIGH	In the Linux kernel 5.0.21, mounting a crafted btrfs filesystem image, performing some operations, and then making a syncfs system call can lead to a use-after-free in __mutex_lock in kernel/locking/mutex.c. This is related to mutex_can_spin_on_owner in kernel/locking/mutex.c, __btrfs_qgroup_free_meta in fs/btrfs/qgroup.c, and btrfs_insert_delayed_items in fs/btrfs/delayed-inode.c.	linux	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	LIN1019-3800
701	CVE-2019-19807	MEDIUM	MEDIUM	In the Linux kernel before 5.3.11, sound/core/timer.c has a use-after-free caused by erroneous code refactoring, aka CID-e7af6307a8a5. This is related to snd_timer_open and snd_timer_close_locked. The timeri variable was originally intended to be for a newly created timer instance, but was used for a different purpose after refactoring.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.4	Not vulnerable	LIN1019-3789
702	CVE-2019-19770	MEDIUM	HIGH	In the Linux kernel 4.19.83, there is a use-after-free (read) in the debugfs_remove function in fs/debugfs/inode.c (which is used to remove a file or directory in debugfs that was previously created with a call to another debugfs function such as debugfs_create_file).	linux	Unchanged	Investigate	Investigate	Investigate	Investigate	Investigate	Not vulnerable	LIN1019-3774

743	CVE-2019-19337	MEDIUM	MEDIUM	A flaw was found in Red Hat Ceph Storage version 3 in the way the Ceph RADOS Gateway daemon handles S3 requests. An authenticated attacker can abuse this flaw by causing a remote denial of service by sending a specially crafted HTTP Content-Length header to the Ceph RADOS Gateway server.	ceph	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	LIN1019-3846
744	CVE-2019-19332	MEDIUM	MEDIUM	An out-of-bounds memory write issue was found in the Linux Kernel, version 3.13 through 5.4, in the way the Linux kernel's KVM hypervisor handled the 'KVM_GET_EMULATED_CPUID' ioctl(2) request to get CPUID features emulated by the KVM hypervisor. A user or process able to access the '/dev/kvm' device could use this flaw to crash the system, resulting in a denial of service.	linux	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.4	10.20.6.0	LIN1019-3920
745	CVE-2019-19319	MEDIUM	HIGH	In the Linux kernel 5.0.21, a setxattr operation, after a mount of a crafted ext4 image, can cause a slab-out-of-bounds write access because of an ext4_xattr_set_entry use-after-free in fs/ext4/xattr.c when a large old_size value is used in a memset call.	linux	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Investigate	Investigate	LIN1019-3648
746	CVE-2019-19318	MEDIUM	MEDIUM	In the Linux kernel 5.3.11, mounting a crafted btrfs image twice can cause an rwsem_down_write_slowpath use-after-free because (in rwsem_can_spin_on_owner in kernel/locking/rwsem.c) rwsem_owner_flags returns an already freed pointer.	linux	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	LIN1019-3649
747	CVE-2019-19317	HIGH	CRITICAL	lookupName in resolve.c in SQLite 3.30.1 omits bits from the colUsed bitmask in the case of a generated column, which allows attackers to cause a denial of service or possibly have unspecified other impact.	sqlite	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1019-3718
748	CVE-2019-19272	MEDIUM	HIGH	An issue was discovered in tls_verify_crl in ProFTPD before 1.3.6. Direct dereference of a NULL pointer (a variable initialized to NULL) leads to a crash when validating the certificate of a client connecting to the server in a TLS client/server mutual-authentication setup.	proftpd	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3598
749	CVE-2019-19271	MEDIUM	HIGH	An issue was discovered in tls_verify_crl in ProFTPD before 1.3.6. A wrong iteration variable, used when checking a client certificate against CRL entries (installed by a system administrator), can cause some CRL entries to be ignored, and can allow clients whose certificates have been revoked to proceed with a connection to the server.	proftpd	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3599
750	CVE-2019-19270	MEDIUM	HIGH	An issue was discovered in tls_verify_crl in ProFTPD through 1.3.6b. Failure to check for the appropriate field of a CRL entry (checking twice for subject, rather than once for subject and once for issuer) prevents some valid CRLs from being taken into account, and can allow clients whose certificates have been revoked to proceed with a connection to the server.	proftpd	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3600
751	CVE-2019-19269	MEDIUM	MEDIUM	An issue was discovered in tls_verify_crl in ProFTPD through 1.3.6b. A dereference of a NULL pointer may occur. This pointer is returned by the OpenSSL sk_X509_REVOKED_value() function when encountering an empty CRL installed by a system administrator. The dereference occurs when validating the certificate of a client connecting to the server in a TLS client/server mutual-authentication setup.	proftpd	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3707
752	CVE-2019-19252	MEDIUM	HIGH	vcs_write in drivers/tty/vt/vc_screen.c in the Linux kernel through 5.3.13 does not prevent write access to vcsu devices, aka CID-0c9acb1af77a.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.2	Not vulnerable	LIN1019-3596
753	CVE-2019-19244	MEDIUM	HIGH	sqlite3Select in select.c in SQLite 3.30.1 allows a crash if a sub-select uses both DISTINCT and window functions, and also has certain ORDER BY usage.	sqlite	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.2	10.20.6.0	LIN1019-3602
754	CVE-2019-19242	MEDIUM	HIGH	SQLite 3.30.1 mishandles pExpr->y.pTab, as demonstrated by the TK_COLUMN case in sqlite3ExprCodeTarget in expr.c.	sqlite	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.2	Not vulnerable	LIN1019-3660
755	CVE-2019-19241	MEDIUM	HIGH	In the Linux kernel before 5.4.2, the io_uring feature leads to requests that inadvertently have UID 0 and full capabilities, aka CID-181e448d8709. This is related to fs/io-wq.c, fs/io_uring.c, and net/socket.c. For example, an attacker can bypass intended restrictions on adding an IPv4 address to the loopback interface. This occurs because IORING_OP_SENDMSG operations, although requested in the context of an unprivileged user, are sometimes performed by a kernel worker thread without considering that context.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.3	Not vulnerable	LIN1019-3801
756	CVE-2019-19234	MEDIUM	HIGH	In Sudo through 1.8.29, the fact that a user has been blocked (e.g., by using the ! character in the shadow file instead of a password hash) is not considered, allowing an attacker (who has access to a Runas ALL sudoer account) to impersonate any blocked user.	shadow	Unchanged	8.0.0.33	9.0.0.25	10.17.41.19	10.18.44.14	10.19.45.3	Not vulnerable	LIN1019-3816
757	CVE-2019-19232	MEDIUM	HIGH	In Sudo through 1.8.29, an attacker with access to a Runas ALL sudoer account can impersonate a nonexistent user by invoking sudo with a numeric uid that is not associated with any user.	sudo	Unchanged	8.0.0.33	9.0.0.25	10.17.41.19	10.18.44.14	10.19.45.3	Not vulnerable	LIN1019-3817
758	CVE-2019-19227	LOW	MEDIUM	In the AppleTalk subsystem in the Linux kernel before 5.1, there is a potential NULL pointer dereference because register_snap_client may return NULL. This will lead to denial of service in net/appletalk/aarp.c and net/appletalk/ddp.c, as demonstrated by unregister_snap_client, aka CID-9804501fa122.	linux	Unchanged	8.0.0.33	9.0.0.25	10.17.41.19	10.18.44.14	Not vulnerable	Not vulnerable	LIN1019-3582
759	CVE-2019-19221	LOW	MEDIUM	In Libarchive 3.4.0, archive_wstring_append_from_mbs in archive_string.c has an out-of-bounds read because of an incorrect mbrtowc or mbtowc call. For example, bsdtar crashes via a crafted archive.	libarchive	Unchanged	8.0.0.32	9.0.0.25	10.17.41.19	10.18.44.13	10.19.45.2	10.20.3.0	LIN1019-3578

	A	B	C	D	E	F	G	H	I	J	K	L	M
760	CVE-2019-19126	LOW	LOW	On the x86-64 architecture, the GNU C Library (aka glibc) before 2.31 fails to ignore the LD_PREFER_MAP_32BIT_EXEC environment variable during program execution after a security transition, allowing local attackers to restrict the possible mapping addresses for loaded libraries and thus bypass ASLR for a setuid program.	glibc	Unchanged	Not vulnerable	Vulnerable	10.17.41.20	10.18.44.15	10.19.45.6	10.20.3.0	LIN1019-3566
761	CVE-2019-19083	HIGH	HIGH	Memory leaks in *clock_source_create() functions under drivers/gpu/drm/amd/display/dc in the Linux kernel before 5.3.8 allow attackers to cause a denial of service (memory consumption). This affects the dce112_clock_source_create() function in drivers/gpu/drm/amd/display/dc/dce112/dce112_resource.c, the dce100_clock_source_create() function in drivers/gpu/drm/amd/display/dc/dce100/dce100_resource.c, the dcn10_clock_source_create() function in drivers/gpu/drm/amd/display/dc/dcn10/dcn10_resource.c, the dcn20_clock_source_create() function in drivers/gpu/drm/amd/display/dc/dcn20/dcn20_resource.c, the dce120_clock_source_create() function in drivers/gpu/drm/amd/display/dc/dce120/dce120_resource.c, the dce110_clock_source_create() function in drivers/gpu/drm/amd/display/dc/dce110/dce110_resource.c, and the dce80_clock_source_create() function in drivers/gpu/drm/amd/display/dc/dce80/dce80_resource.c, aka CID-055e547478a1.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.13	10.19.45.2	10.20.3.0	LIN1019-3478
762	CVE-2019-19082	HIGH	HIGH	Memory leaks in *create_resource_pool() functions under drivers/gpu/drm/amd/display/dc in the Linux kernel through 5.3.11 allow attackers to cause a denial of service (memory consumption). This affects the dce120_create_resource_pool() function in drivers/gpu/drm/amd/display/dc/dce120/dce120_resource.c, the dce110_create_resource_pool() function in drivers/gpu/drm/amd/display/dc/dce110/dce110_resource.c, the dce100_create_resource_pool() function in drivers/gpu/drm/amd/display/dc/dce100/dce100_resource.c, the dcn10_create_resource_pool() function in drivers/gpu/drm/amd/display/dc/dcn10/dcn10_resource.c, and the dce112_create_resource_pool() function in drivers/gpu/drm/amd/display/dc/dce112/dce112_resource.c, aka CID-104c307147ad.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.13	10.19.45.2	10.20.3.0	LIN1019-3479
763	CVE-2019-19081	HIGH	HIGH	A memory leak in the nfp_flower_spawn_vnic_reprs() function in drivers/net/ethernet/netronome/nfp/flower/main.c in the Linux kernel before 5.3.4 allows attackers to cause a denial of service (memory consumption), aka CID-8ce39eb5a67a.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.13	10.19.45.1	10.20.3.0	LIN1019-3480

804	CVE-2019-19036	MEDIUM	MEDIUM	btrfs_root_node in fs/btrfs/ctree.c in the Linux kernel through 5.3.12 allows a NULL pointer dereference because rcu_dereference(root->node) can be zero.	linux	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Investigate	LIN1019-3572
805	CVE-2019-19011	MEDIUM	HIGH	MiniUPnP ngiflib 0.4 has a NULL pointer dereference in GifIndexToTrueColor in ngiflib.c via a file that lacks a palette.	miniupnpd	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3477
806	CVE-2019-18885	LOW	MEDIUM	fs/btrfs/volumes.c in the Linux kernel before 5.1 allows a btrfs_verify_dev_extents NULL pointer dereference via a crafted btrfs image because fs_devices->devices is mishandled within find_device, aka CID-09ba3bc9dd15.	linux	Unchanged	8.0.0.33	9.0.0.25	10.17.41.19	10.18.44.14	Not vulnerable	Not vulnerable	LIN1019-3467

	A	B	C	D	E	F	G	H	I	J	K	L	M
807	CVE-2019-18874	MEDIUM	HIGH	psutil (aka python-psutil) through 5.6.5 can have a double free. This occurs because of refcount mishandling within a while or for loop that converts system data into a Python object.	python-psutil	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3436
808	CVE-2019-18860	MEDIUM	MEDIUM	Squid before 4.9, when certain web browsers are used, mishandles HTML in the host (aka hostname) parameter to cachemgr.cgi.	squid	Updated	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4158
809	CVE-2019-18853	MEDIUM	MEDIUM	ImageMagick before 7.0.9-0 allows remote attackers to cause a denial of service because XML_PARSE_HUGE is not properly restricted in coders/svg.c, related to SVG and libxml2.	imagemagick	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3437
810	CVE-2019-18840	MEDIUM	HIGH	In wolfSSL 4.1.0 through 4.2.0c, there are missing sanity checks of memory accesses in parsing ASN.1 certificate data while handshaking. Specifically, there is a one-byte heap-based buffer overflow inside the DecodedCert structure in GetName in wolfcrypt/src/asn.c because the domain name location index is mishandled. Because a pointer is overwritten, there is an invalid free.	wolfssl	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3438
811	CVE-2019-18814	HIGH	CRITICAL	An issue was discovered in the Linux kernel through 5.3.9. There is a use-after-free when aa_label_parse() fails in aa_audit_rule_init() in security/apparmor/audit.c.	linux	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	LIN1019-3379
812	CVE-2019-18813	HIGH	HIGH	A memory leak in the dwc3_pci_probe() function in drivers/usb/dwc3/dwc3-pci.c in the Linux kernel through 5.3.9 allows attackers to cause a denial of service (memory consumption) by triggering platform_device_add_properties() failures, aka CID-9bbfceea12a8.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.2	10.20.3.0	LIN1019-3380
813	CVE-2019-18812	HIGH	HIGH	A memory leak in the sof_dfsentry_write() function in sound/soc/sof/debug.c in the Linux kernel through 5.3.9 allows attackers to cause a denial of service (memory consumption), aka CID-c0a333d842ef.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.20.3.0	LIN1019-3381
814	CVE-2019-18811	HIGH	HIGH	A memory leak in the sof_set_get_large_ctrl_data() function in sound/soc/sof/ipc.c in the Linux kernel through 5.3.9 allows attackers to cause a denial of service (memory consumption) by triggering sof_get_ctrl_copy_params() failures, aka CID-45c1380358b1.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.2	10.20.3.0	LIN1019-3382
815	CVE-2019-18810	HIGH	HIGH	A memory leak in the komeda_wb_connector_add() function in drivers/gpu/drm/arm/display/komeda/komeda_wb_connector.c in the Linux kernel before 5.3.8 allows attackers to cause a denial of service (memory consumption) by triggering drm_writeback_connector_init() failures, aka CID-a0ecd6fdbf5d.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.20.3.0	LIN1019-3383
816	CVE-2019-18809	HIGH	HIGH	A memory leak in the af9005_identify_state() function in drivers/media/usb/dvb-usb/af9005.c in the Linux kernel through 5.3.9 allows attackers to cause a denial of service (memory consumption), aka CID-2289adbfa559.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.19	10.18.44.14	10.19.45.2	10.20.3.0	LIN1019-3384
817	CVE-2019-18808	MEDIUM	HIGH	A memory leak in the ccp_run_sha_cmd() function in drivers/crypto/ccp/ccp-ops.c in the Linux kernel through 5.3.9 allows attackers to cause a denial of service (memory consumption), aka CID-128c66429247.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.19	10.18.44.14	10.19.45.2	10.20.3.0	LIN1019-3385
818	CVE-2019-18807	MEDIUM	HIGH	Two memory leaks in the sja1105_static_config_upload() function in drivers/net/dsa/sja1105/sja1105_spi.c in the Linux kernel before 5.3.5 allow attackers to cause a denial of service (memory consumption) by triggering static_config_buf_prepare_for_upload() or sja1105_inhibit_tx() failures, aka CID-68501df92d11.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.2	10.20.3.0	LIN1019-3386
819	CVE-2019-18806	LOW	MEDIUM	A memory leak in the ql_alloc_large_buffers() function in drivers/net/ethernet/qlogic/qla3xxx.c in the Linux kernel before 5.3.5 allows local users to cause a denial of service (memory consumption) by triggering pci_dma_mapping_error() failures, aka CID-1acb82a7a9f.	linux	Unchanged	8.0.0.32	9.0.0.24	10.17.41.19	10.18.44.13	Not vulnerable	Investigate	LIN1019-3387
820	CVE-2019-18805	HIGH	CRITICAL	An issue was discovered in net/ipv4/sysctl_net_ipv4.c in the Linux kernel before 5.0.11. There is a net/ipv4/tcp_input.c signed integer overflow in tcp_ack_update_rtt() when userspace writes a very large integer to /proc/sys/net/ipv4/tcp_min_rtt_wlen, leading to a denial of service or possibly unspecified other impact, aka CID-19fad20d15a6.	linux	Unchanged	Not vulnerable	9.0.0.24	10.17.41.19	Not vulnerable	Not vulnerable	Investigate	LIN1019-3388
821	CVE-2019-18792	MEDIUM	CRITICAL	An issue was discovered in Suricata 5.0.0. It is possible to bypass/evade any tcp based signature by overlapping a TCP segment with a fake FIN packet. The fake FIN packet is injected just before the PUSH ACK packet we want to bypass. The PUSH ACK packet (containing the data) will be ignored by Suricata because it overlaps the FIN packet (the sequence and ack number are identical in the two packets). The client will ignore the fake FIN packet because the ACK flag is not set. Both linux and windows clients are ignoring the injected packet.	suricata	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3889
822	CVE-2019-18786	LOW	MEDIUM	In the Linux kernel through 5.3.8, f->fmt.sdr.reserved is uninitialized in rcar_drif_g_fmt_sdr_cap in drivers/media/platform/rcar_drif.c, which could cause a memory disclosure problem.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.14	10.19.45.2	10.20.3.0	LIN1019-3291
823	CVE-2019-18684	MEDIUM	HIGH	** DISPUTED ** Sudo through 1.8.29 allows local users to escalate to root if they have write access to file descriptor 3 of the sudo process. This occurs because of a race condition between determining a uid, and the setresuid and openat system calls. The attacker can write ALL ALL=(ALL) NOPASSWD:ALL to /proc/#####/fd/3 at a time when Sudo is prompting for a password. NOTE: This has been disputed due to the way Linux /proc works. It has been argued that writing to /proc/#####/fd/3 would only be viable if you had permission to write to /etc/sudoers. Even with write permission to /proc/#####/fd/3, it would not help you write to /etc/sudoers.	sudo	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1019-3292

	A	B	C	D	E	F	G	H	I	J	K	L	M
824	CVE-2019-18683	MEDIUM	HIGH	An issue was discovered in drivers/media/platform/vivid in the Linux kernel through 5.3.8. It is exploitable for privilege escalation on some Linux distributions where local users have /dev/video0 access, but only if the driver happens to be loaded. There are multiple race conditions during streaming stopping in this driver (part of the V4L2 subsystem). These issues are caused by wrong mutex locking in vivid_stop_generating_vid_cap(), vivid_stop_generating_vid_out(), sdr_cap_stop_streaming(), and the corresponding kthreads. At least one of these race conditions leads to a use-after-free.	linux	Unchanged	8.0.0.32	9.0.0.25	10.17.41.19	10.18.44.14	10.19.45.2	Not vulnerable	LIN1019-3293
825	CVE-2019-18680	HIGH	HIGH	An issue was discovered in the Linux kernel 4.4.x before 4.4.195. There is a NULL pointer dereference in rds_tcp_kill_sock() in net/rds/tcp.c that will cause denial of service, aka CID-9157ae4aed0.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Investigate	LIN1019-3294
826	CVE-2019-18679	MEDIUM	HIGH	An issue was discovered in Squid 2.x, 3.x, and 4.x through 4.8. Due to incorrect data management, it is vulnerable to information disclosure when processing HTTP Digest Authentication. Nonce tokens contain the raw byte value of a pointer that sits within heap memory allocation. This information reduces ASLR protections and may aid attackers isolating memory areas to target for remote code execution attacks.	squid	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3651
827	CVE-2019-18678	MEDIUM	MEDIUM	An issue was discovered in Squid 3.x and 4.x through 4.8. It allows attackers to smuggle HTTP requests through frontend software to a Squid instance that splits the HTTP Request pipeline differently. The resulting Response messages corrupt caches (between a client and Squid) with attacker-controlled content at arbitrary URLs. Effects are isolated to software between the attacker client and Squid. There are no effects on Squid itself, nor on any upstream servers. The issue is related to a request header containing whitespace between a header name and a colon.	squid	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3652
828	CVE-2019-18677	MEDIUM	MEDIUM	An issue was discovered in Squid 3.x and 4.x through 4.8 when the append_domain setting is used (because the appended characters do not properly interact with hostname length restrictions). Due to incorrect message processing, it can inappropriately redirect traffic to origins it should not be delivered to.	squid	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3653
829	CVE-2019-18676	MEDIUM	HIGH	An issue was discovered in Squid 3.x and 4.x through 4.8. Due to incorrect input validation, there is a heap-based buffer overflow that can result in Denial of Service to all clients using the proxy. Severity is high due to this vulnerability occurring before normal security checks; any remote client that can reach the proxy port can trivially perform the attack via a crafted URI scheme.	squid	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3654
830	CVE-2019-18675	HIGH	HIGH	The Linux kernel through 5.3.13 has a start_offset+size Integer Overflow in cpia2_remap_buffer in drivers/media/usb/cpia2/cpia2_core.c because cpia2 has its own mmap implementation. This allows local users (with /dev/video0 access) to obtain read and write permissions on kernel physical pages, which can possibly result in a privilege escalation.	linux	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	LIN1019-3601
831	CVE-2019-18660	LOW	MEDIUM	The Linux kernel through 5.3.13 on powerpc allows Information Exposure because the Spectre-RSB mitigation is not in place for all applicable CPUs, aka CID-39e72bf96f58. This is related to arch/powerpc/kernel/entry_64.S and arch/powerpc/kernel/security.c.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.14	10.19.45.2	Not vulnerable	LIN1019-3650
832	CVE-2019-18634	MEDIUM	HIGH	In Sudo before 1.8.26, if pwfeedback is enabled in /etc/sudoers, users can trigger a stack-based buffer overflow in the privileged sudo process. (pwfeedback is a default setting in Linux Mint and elementary OS; however, it is NOT the default for upstream and many other packages, and would exist only if enabled by an administrator.) The attacker needs to deliver a long string to the stdin of getln() in tgetpass.c.	sudo	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.5	Not vulnerable	LIN1019-3986
833	CVE-2019-18625	MEDIUM	HIGH	An issue was discovered in Suricata 5.0.0. It was possible to bypass/evade any tcp based signature by faking a closed TCP session using an evil server. After the TCP SYN packet, it is possible to inject a RST ACK and a FIN ACK packet with a bad TCP Timestamp option. The client will ignore the RST ACK and the FIN ACK packets because of the bad TCP Timestamp option. Both linux and windows client are ignoring the injected packets.	suricata	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3890
834	CVE-2019-18622	HIGH	CRITICAL	An issue was discovered in phpMyAdmin before 4.9.2. A crafted database/table name can be used to trigger a SQL injection attack through the designer feature.	phpmyadmin	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	10.20.3.0	LIN1019-3581
835	CVE-2019-18609	HIGH	CRITICAL	An issue was discovered in amqp_handle_input in amqp_connection.c in rabbitmq-c 0.9.0. There is an integer overflow that leads to heap memory corruption in the handling of CONNECTION_STATE_HEADER. A rogue server could return a malicious frame header that leads to a smaller target_size value than needed. This condition is then carried on to a memcpy function that copies too much data into a heap buffer.	rabbitmq-c	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	10.19.45.3	Not vulnerable	LIN1019-3782
836	CVE-2019-18408	MEDIUM	HIGH	archive_read_format_rar_read_data in archive_read_support_format_rar.c in libarchive before 3.4.0 has a use-after-free in a certain ARCHIVE_FAILED situation, related to Ppmd7_DecodeSymbol.	libarchive	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.12	Not vulnerable	Investigate	LIN1018-5163

	A	B	C	D	E	F	G	H	I	J	K	L	M
837	CVE-2019-18397	MEDIUM	HIGH	A buffer overflow in the fribidi_get_par_embedding_levels_ex() function in lib/fribidi-bidi.c of GNU FriBidi through 1.0.7 allows an attacker to cause a denial of service or possibly execute arbitrary code by delivering crafted text content to a user, when this content is then rendered by an application that uses FriBidi for text layout calculations. Examples include any GNOME or GTK+ based application that uses Pango for text layout, as this internally uses FriBidi for bidirectional text layout. For example, the attacker can construct a crafted text file to be opened in GEdit, or a crafted IRC message to be viewed in HexChat.	fribidi	Unchanged	Won't Fix	Won't Fix	Won't Fix	10.18.44.13	10.19.45.2	Investigate	LIN1019-3450
838	CVE-2019-18391	LOW	MEDIUM	A heap-based buffer overflow in the vrend_renderer_transfer_write_iov function in vrend_renderer.c in virglrenderer through 0.8.0 allows guest OS users to cause a denial of service via VIRGL_CCMD_RESOURCE_INLINE_WRITE commands.	virglrenderer	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.3	Not vulnerable	LIN1019-3842
839	CVE-2019-18390	LOW	HIGH	An out-of-bounds read in the vrend_blit_need_swizzle function in vrend_renderer.c in virglrenderer through 0.8.0 allows guest OS users to cause a denial of service via VIRGL_CCMD_BLIT commands.	virglrenderer	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.3	Not vulnerable	LIN1019-3843
840	CVE-2019-18389	MEDIUM	HIGH	A heap-based buffer overflow in the vrend_renderer_transfer_write_iov function in vrend_renderer.c in virglrenderer through 0.8.0 allows guest OS users to cause a denial of service, or QEMU guest-to-host escape and code execution, via VIRGL_CCMD_RESOURCE_INLINE_WRITE commands.	virglrenderer	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.3	Not vulnerable	LIN1019-3844
841	CVE-2019-18388	LOW	MEDIUM	A NULL pointer dereference in vrend_renderer.c in virglrenderer through 0.8.0 allows guest OS users to cause a denial of service via malformed commands.	virglrenderer	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	10.19.45.3	Not vulnerable	LIN1019-3845
842	CVE-2019-18348	MEDIUM	MEDIUM	An issue was discovered in urllib2 in Python 2.x through 2.7.17 and urllib in Python 3.x through 3.8.0. CRLF injection is possible if the attacker controls a url parameter, as demonstrated by the first argument to urllib.request.urlopen with \r\n (specifically in the host component of a URL) followed by an HTTP header. This is similar to the CVE-2019-9740 query string issue and the CVE-2019-9947 path string issue. (This is not exploitable when glibc has CVE-2016-10739 fixed.)	python	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Investigate	Not vulnerable	LIN1018-5159
843	CVE-2019-18282	MEDIUM	MEDIUM	The flow_dissector feature in the Linux kernel 4.3 through 5.x before 5.3.10 has a device tracking vulnerability, aka CID-5567441c84f. This occurs because the auto flowlabel of a UDP IPv6 packet relies on a 32-bit hashmd value as a secret, and because jhash (instead of siphash) is used. The hashmd value remains the same starting from boot time, and can be inferred by an attacker. This affects net/core/flow_dissector.c and related code.	linux	Unchanged	Not vulnerable	9.0.0.25	Investigate	10.18.44.15	10.19.45.3	10.20.6.0	LIN1019-3954
844	CVE-2019-18276	HIGH	CRITICAL	An issue was discovered in disable_priv_mode in shell.c in GNU Bash through 5.0 patch 11. By default, if Bash is run with its effective UID not equal to its real UID, it will drop privileges by setting its effective UID to its real UID. However, it does so incorrectly. On Linux and other systems that support saved UID functionality, the saved UID is not dropped. An attacker with command execution in the shell can use enable -f for runtime loading of a new builtin, which can be a shared object that calls setuid() and therefore regains privileges. However, binaries running with an effective UID of 0 are unaffected.	bash	Unchanged	8.0.0.33	9.0.0.25	10.17.41.19	10.18.44.14	10.19.45.3	10.20.3.0	LIN1019-3706
845	CVE-2019-18224	HIGH	CRITICAL	idn2_to_ascii_4i in lib/lookup.c in GNU libidn2 before 2.1.1 has a heap-based buffer overflow via a long domain string.	libidn2	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.12	Not vulnerable	Investigate	LIN1018-5151
846	CVE-2019-18218	HIGH	CRITICAL	cdf_read_property_info in cdf.c in file through 5.37 does not restrict the number of CDF_VECTOR elements, which allows a heap-based buffer overflow (4-byte out-of-bounds write).	file	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.12	10.19.45.1	Not vulnerable	LIN1018-5152
847	CVE-2019-18217	MEDIUM	HIGH	ProFTPD before 1.3.6b and 1.3.7rc before 1.3.7rc2 allows remote unauthenticated denial-of-service due to incorrect handling of overly long commands because main.c in a child process enters an infinite loop.	proftpd	Unchanged	8.0.0.31	9.0.0.24	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-5165
848	CVE-2019-18198	HIGH	HIGH	In the Linux kernel before 5.3.4, a reference count usage error in the fib6_rule_suppress() function in the fib6 suppression feature of net/ipv6/fib6_rules.c, when handling the FIB_LOOKUP_NOREF flag, can be exploited by a local attacker to corrupt memory, aka CID-ca7a03c41753.	linux	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.12	Not vulnerable	Investigate	LIN1018-5112
849	CVE-2019-18197	MEDIUM	CRITICAL	In xsltCopyText in transform.c in libxslt 1.1.33, a pointer variable isn't reset under certain circumstances. If the relevant memory area happened to be freed and reused in a certain way, a bounds check could fail and memory outside a buffer could be written to, or uninitialized data could be disclosed.	libxslt	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.12	10.19.45.1	Not vulnerable	LIN1018-5111
850	CVE-2019-1798	Medium	MEDIUM	A vulnerability in the Portable Executable (PE) file scanning functionality of Clam AntiVirus (ClamAV) Software versions 0.101.1 and prior could allow an unauthenticated, remote attacker to cause a denial of service condition on an affected device. The vulnerability is due to a lack of proper input and validation checking mechanisms for PE files sent an affected device. An attacker could exploit this vulnerability by sending malformed PE files to the device running an affected version ClamAV Software. An exploit could allow the attacker to cause an out-of-bounds read condition, resulting in a crash that could result in a denial of service condition on an affected device.	clamav	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3875
851	CVE-2019-1789	MEDIUM	HIGH	ClamAV versions prior to 0.101.2 are susceptible to a denial of service (DoS) vulnerability. An out-of-bounds heap read condition may occur when scanning PE files. An example is Windows EXE and DLL files that have been packed using Aspack as a result of inadequate bound-checking.	clamav	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	LIN1019-3300

869	CVE-2019-17539	HIGH	CRITICAL	In FFmpeg before 4.2, avcodec_open2 in libavcodec/utils.c allows a NULL pointer dereference and possibly unspecified other impact when there is no valid close function pointer.	ffmpeg	Unchanged	Won't Fix	9.0.0.24	10.17.41.19	10.18.44.12	Not vulnerable	Not vulnerable	LIN1018-5097
870	CVE-2019-17514	MEDIUM	HIGH	library/glob.html in the Python 2 and 3 documentation before 2016 has potentially misleading information about whether sorting occurs, as demonstrated by irreproducible cancer-research results. NOTE: the effects of this documentation cross application domains, and thus it is likely that security-relevant code elsewhere is affected. This issue is not a Python implementation bug, and there are no reports that NMR researchers were specifically relying on library/glob.html. In other words, because the older documentation stated finds all the pathnames matching a specified pattern according to the rules used by the Unix shell, one might have incorrectly inferred that the sorting that occurs in a Unix shell also occurred for glob.glob. There is a workaround in newer versions of Willoughby nmr-data_compilation-p2.py and nmr-data_compilation-p3.py, which call sort() directly.	python	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	LIN1018-5189
871	CVE-2019-17498	MEDIUM	HIGH	In libssh2 v1.9.0 and earlier versions, the SSH_MSG_DISCONNECT logic in packet.c has an integer overflow in a bounds check, enabling an attacker to specify an arbitrary (out-of-bounds) offset for a subsequent memory read. A crafted SSH server may be able to disclose sensitive information or cause a denial of service condition on the client system when a user connects to the server.	libssh2	Unchanged	8.0.0.32	9.0.0.25	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-5153
872	CVE-2019-17451	MEDIUM	MEDIUM	An issue was discovered in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.32. It is an integer overflow leading to a SEGV in _bfd_dwarf2_find_nearest_line in dwarf2.c, as demonstrated by nm.	binutils	Unchanged	Vulnerable	Vulnerable	10.17.41.20	10.18.44.12	10.19.45.6	10.20.3.0	LIN1018-5080
873	CVE-2019-17450	MEDIUM	MEDIUM	find_abstract_instance in dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.32, allows remote attackers to cause a denial of service (infinite recursion and application crash) via a crafted ELF file.	binutils	Unchanged	Vulnerable	Vulnerable	10.17.41.20	10.18.44.12	10.19.45.6	10.20.3.0	LIN1018-5081
874	CVE-2019-17420	MEDIUM	MEDIUM	In OISF LibHTP before 0.5.31, as used in Suricata 4.1.4 and other products, an HTTP protocol parsing error causes the http_header signature to not alert on a response with a single \r\n ending.	suricata	Unchanged	Investigate	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-5083
875	CVE-2019-17382	MEDIUM	CRITICAL	An issue was discovered in zabbix.php?action=dashboard.view&dashboardid=1 in Zabbix through 4.4. An attacker can bypass the login page and access the dashboard page, and then create a Dashboard, Report, Screen, or Map without any Username/Password (i.e., anonymously). All created elements (Dashboard/Report/Screen/Map) are accessible by other users and by an admin.	zabbix	Unchanged	Investigate	Investigate	Investigate	Investigate	Not vulnerable	Not vulnerable	LIN1018-5070

890	CVE-2019-17041	HIGH	CRITICAL	An issue was discovered in Rsyslog v8.1908.0. contrib/pmaixforwardedfrom/pmaixforwardedfrom.c has a heap overflow in the parser for AIX log messages. The parser tries to locate a log message delimiter (in this case, a space or a colon) but fails to account for strings that do not satisfy this constraint. If the string does not match, then the variable lenMsg will reach the value zero and will skip the sanity check that detects invalid log messages. The message will then be considered valid, and the parser will eat up the nonexistent colon delimiter. In doing so, it will decrement lenMsg, a signed integer, whose value was zero and now becomes minus one. The following step in the parser is to shift left the contents of the message. To do this, it will call memmove with the right pointers to the target and destination strings, but the lenMsg will now be interpreted as a huge value, causing a heap overflow.	rsyslog	Unchanged	Not vulnerable	9.0.0.24	10.17.41.20	10.18.44.11	10.19.45.1	Not vulnerable	LIN1018-5087

968	CVE-2019-15606	HIGH	CRITICAL	Including trailing white space in HTTP header values in Nodejs 10, 12, and 13 causes bypass of authorization based on header value comparisons	nodejs	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4015
969	CVE-2019-15605	HIGH	CRITICAL	HTTP request smuggling in Node.js 10, 12, and 13 causes malicious payload delivery when transfer-encoding is malformed	nodejs	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4016
970	CVE-2019-15604	MEDIUM	HIGH	Improper Certificate Validation in Node.js 10, 12, and 13 causes the process to abort when sending a crafted X.509 certificate	nodejs	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4017
971	CVE-2019-1559	Medium	MEDIUM	If an application encounters a fatal protocol error and then calls SSL_shutdown() twice (once to send a close_notify, and once to receive one) then OpenSSL can respond differently to the calling application if a 0 byte record is received with invalid padding compared to if a 0 byte record is received with an invalid MAC. If the application then behaves differently based on that in a way that is detectable to the remote peer, then this amounts to a padding oracle that could be used to decrypt data. In order for this to be exploitable non-stitched ciphersuites must be in use. Stitched ciphersuites are optimised implementations of certain commonly used ciphersuites. Also the application must call SSL_shutdown() twice even if a protocol error has occurred (applications should not do this but some do anyway). Fixed in OpenSSL 1.0.2r (Affected 1.0.2-1.0.2q).	openssl	Unchanged	8.0.0.30	9.0.0.21	10.17.41.15	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3653
972	CVE-2019-15538	HIGH	HIGH	An issue was discovered in xfs_setattr_nonsize in fs/xfs/xfs_iops.c in the Linux kernel through 5.2.9. XFS partially wedges when a chgrp fails on account of being out of disk quota. xfs_setattr_nonsize is failing to unlock the ILOCK after the xfs_qm_vop_chown_reserve call fails. This is primarily a local DoS attack vector, but it might result as well in remote DoS if the XFS filesystem is exported for instance via NFS.	linux	Unchanged	Not vulnerable	Vulnerable	10.17.41.18	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4766
973	CVE-2019-1552	LOW	LOW	OpenSSL has internal defaults for a directory tree where it can find a configuration file as well as certificates used for verification in TLS. This directory is most commonly referred to as OPENSSLDIR, and is configurable with the --prefix / --openssldir configuration options. For OpenSSL versions 1.1.0 and 1.1.1, the mingw configuration targets assume that resulting programs and libraries are installed in a Unix-like environment and the default prefix for program installation as well as for OPENSSLDIR should be '/usr/local'. However, mingw programs are Windows programs, and as such, find themselves looking at sub-directories of 'C:/usr/local', which may be world writable, which enables untrusted users to modify OpenSSL's default configuration, insert CA certificates, modify (or even replace) existing engine modules, etc. For OpenSSL 1.0.2, '/usr/local/ssl' is used as default for OPENSSLDIR on all Unix and Windows targets, including Visual C builds. However, some build instructions for the diverse Windows targets on 1.0.2 encourage you to specify your own --prefix. OpenSSL versions 1.1.1, 1.1.0 and 1.0.2 are affected by this issue. Due to the limited scope of affected deployments this has been assessed as low severity and therefore we are not creating new releases at this time. Fixed in OpenSSL 1.1.1d (Affected 1.1.1-1.1.1c). Fixed in OpenSSL 1.1.0l (Affected 1.1.0-1.1.0k). Fixed in OpenSSL 1.0.2t (Affected 1.0.2-1.0.2s).	openssl	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.10	Not vulnerable	Not vulnerable	LIN1018-4574
974	CVE-2019-1551	MEDIUM	MEDIUM	There is an overflow bug in the x64_64 Montgomery squaring procedure used in exponentiation with 512-bit moduli. No EC algorithms are affected. Analysis suggests that attacks against 2-prime RSA1024, 3-prime RSA1536, and DSA1024 as a result of this defect would be very difficult to perform and are not believed likely. Attacks against DH512 are considered just feasible. However, for an attack the target would have to re-use the DH512 private key, which is not recommended anyway. Also applications directly using the low level API BN_mod_exp may be affected if they use BN_FLG_CONSTTIME. Fixed in OpenSSL 1.1.1e-dev (Affected 1.1.1-1.1.1d). Fixed in OpenSSL 1.0.2u-dev (Affected 1.0.2-1.0.2t).	openssl	Unchanged	8.0.0.32	9.0.0.25	10.17.41.19	10.18.44.14	10.19.45.3	10.20.3.0	LIN1019-3726
975	CVE-2019-15505	High	CRITICAL	drivers/media/usb/dvb-usb/technisat-usb2.c in the Linux kernel through 5.2.9 has an out-of-bounds read via crafted USB device traffic (which may be remote via usbip or usbredir).	linux	Unchanged	8.0.0.32	9.0.0.25	10.17.41.19	10.18.44.14	Not vulnerable	Not vulnerable	LIN1018-4767
976	CVE-2019-15504	High	CRITICAL	drivers/net/wireless/rsi/rsi_91x_usb.c in the Linux kernel through 5.2.9 has a Double Free via crafted USB device traffic (which may be remote via usbip or usbredir).	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.14	Not vulnerable	Not vulnerable	LIN1018-4768
977	CVE-2019-1549	Medium	MEDIUM	OpenSSL 1.1.1 introduced a rewritten random number generator (RNG). This was intended to include protection in the event of a fork() system call in order to ensure that the parent and child processes did not share the same RNG state. However this protection was not being used in the default case. A partial mitigation for this issue is that the output from a high precision timer is mixed into the RNG state so the likelihood of a parent and child process sharing state is significantly reduced. If an application already calls OPENSSL_init_crypto() explicitly using OPENSSL_INIT_ATFORK then this problem does not occur at all. Fixed in OpenSSL 1.1.1d (Affected 1.1.1-1.1.1c).	openssl	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4902

	A	B	C	D	E	F	G	H	I	J	K	L	M
978	CVE-2019-1547	Low	MEDIUM	Normally in OpenSSL EC groups always have a co-factor present and this is used in side channel resistant code paths. However, in some cases, it is possible to construct a group using explicit parameters (instead of using a named curve). In those cases it is possible that such a group does not have the cofactor present. This can occur even where all the parameters match a known named curve. If such a curve is used then OpenSSL falls back to non-side channel resistant code paths which may result in full key recovery during an ECDSA signature operation. In order to be vulnerable an attacker would have to have the ability to time the creation of a large number of signatures where explicit parameters with no co-factor present are in use by an application using libcrypto. For the avoidance of doubt libssl is not vulnerable because explicit parameters are never used. Fixed in OpenSSL 1.1.1d (Affected 1.1.1-1.1.1c). Fixed in OpenSSL 1.1.0l (Affected 1.1.0-1.1.0k). Fixed in OpenSSL 1.0.2t (Affected 1.0.2-1.0.2s).	openssl	Unchanged	8.0.0.31	9.0.0.24	10.17.41.18	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4903
979	CVE-2019-1543	Medium	HIGH	ChaCha20-Poly1305 is an AEAD cipher, and requires a unique nonce input for every encryption operation. RFC 7539 specifies that the nonce value (IV) should be 96 bits (12 bytes). OpenSSL allows a variable nonce length and front pads the nonce with 0 bytes if it is less than 12 bytes. However it also incorrectly allows a nonce to be set of up to 16 bytes. In this case only the last 12 bytes are significant and any additional leading bytes are ignored. It is a requirement of using this cipher that nonce values are unique. Messages encrypted using a reused nonce value are susceptible to serious confidentiality and integrity attacks. If an application changes the default nonce length to be longer than 12 bytes and then makes a change to the leading bytes of the nonce expecting the new value to be a new unique nonce then such an application could inadvertently encrypt messages with a reused nonce. Additionally the ignored bytes in a long nonce are not covered by the integrity guarantee of this cipher. Any application that relies on the integrity of these ignored leading bytes of a long nonce may be further affected. Any OpenSSL internal use of this cipher, including in SSL/TLS, is safe because no such use sets such a long nonce value. However user applications that use this cipher directly and set a non-default nonce length to be longer than 12 bytes may be vulnerable. OpenSSL versions 1.1.1 and 1.1.0 are affected by this issue. Due to the limited scope of affected deployments this has been assessed as low severity and therefore we are not creating new releases at this time. Fixed in OpenSSL 1.1.1c-dev (Affected 1.1.1-1.1.1b). Fixed in OpenSSL 1.1.0k-dev (Affected 1.1.0-1.1.0j).	openssl	Unchanged	Not vulnerable	Not vulnerable	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3781
980	CVE-2019-15296	Medium	HIGH	An issue was discovered in Freeware Advanced Audio Decoder 2 (FAAD2) 2.8.8. The faad_resetbits function in libfaad/bits.c is affected by a buffer overflow vulnerability. The number of bits to be read is determined by ld->buffer_size - words*4, cast to uint32. If ld->buffer_size - words*4 is negative, a buffer overflow is later performed via getdword_n(&ld->start[words], ld->bytes_left).	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4808

984	CVE-2019-15239	HIGH	HIGH	In the Linux kernel, a certain net/ipv4/tcp_output.c change, which was properly incorporated into 4.16.12, was incorrectly backported to the earlier longterm kernels, introducing a new vulnerability that was potentially more severe than the issue that was intended to be fixed by backporting. Specifically, by adding to a write queue between disconnection and re-connection, a local attacker can trigger multiple use-after-free conditions. This can result in a kernel crash, or potentially in privilege escalation. NOTE: this affects (for example) Linux distributions that use 4.9.x longterm kernels before 4.9.190 or 4.14.x longterm kernels before 4.14.139.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4734

1020	CVE-2019-14973	Medium	MEDIUM	_TIFFCheckMalloc and _TIFFCheckRealloc in tif_aux.c in LibTIFF through 4.0.10 mishandle Integer Overflow checks because they rely on compiler behavior that is undefined by the applicable C standards. This can, for example, lead to an application crash.	tiff	Unchanged	8.0.0.31	Investigate	10.17.41.20	10.18.44.10	10.19.45.1	Not vulnerable	LIN1018-4673
1021	CVE-2019-14970	MEDIUM	HIGH	A vulnerability in mkv::event_thread_t in VideoLAN VLC media player 3.0.7.1 allows remote attackers to trigger a heap-based buffer overflow via a crafted .mkv file.	vlc	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4789
1022	CVE-2019-14907	MEDIUM	HIGH	All samba versions 4.9.x before 4.9.18, 4.10.x before 4.10.12 and 4.11.x before 4.11.5 have an issue where if it is set with log level = 3 (or above) then the string obtained from the client, after a failed character conversion, is printed. Such strings can be provided during the NTLMSSP authentication exchange. In the Samba AD DC in particular, this may cause a long-lived process(such as the RPC server) to terminate. (In the file server case, the most likely target, smbd, operates as process-per-client and so a crash there is harmless).	samba	Unchanged	Not vulnerable	Not vulnerable	10.17.41.20	10.18.44.14	10.19.45.4	Not vulnerable	LIN1019-3963
1023	CVE-2019-14902	MEDIUM	MEDIUM	There is an issue in all samba 4.11.x versions before 4.11.5, all samba 4.10.x versions before 4.10.12 and all samba 4.9.x versions before 4.9.18, where the removal of the right to create or modify a subtree would not automatically be taken away on all domain controllers.	samba	Unchanged	Not vulnerable	Not vulnerable	10.17.41.20	10.18.44.14	10.19.45.4	Not vulnerable	LIN1019-3962
1024	CVE-2019-14901	HIGH	CRITICAL	A heap overflow flaw was found in the Linux kernel, all versions 3.x.x and 4.x.x before 4.18.0, in Marvell WiFi chip driver. The vulnerability allows a remote attacker to cause a system crash, resulting in a denial of service, or execute arbitrary code. The highest threat with this vulnerability is with the availability of the system. If code execution occurs, the code will run with the permissions of root. This will affect both confidentiality and integrity of files on the system.	linux	Unchanged	8.0.0.33	9.0.0.25	Investigate	10.18.44.15	10.19.45.5	Not vulnerable	LIN1019-3703
1025	CVE-2019-14897	HIGH	CRITICAL	A stack-based buffer overflow was found in the Linux kernel, version kernel-2.6.32, in Marvell WiFi chip driver. An attacker is able to cause a denial of service (system crash) or, possibly execute arbitrary code, when a STA works in IBSS mode (allows connecting stations together without the use of an AP) and connects to another STA.	linux	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.5	Not vulnerable	LIN1019-3704
1026	CVE-2019-14896	HIGH	CRITICAL	A vulnerability was found in marvell wifi chip driver in Linux kernel. There is a heap-based buffer overflow in lbs_ibss_join_existing function in drivers/net/wireless/marvell/libertas/cfg.c allows remote attackers to cause a denial of service(system crash) or possibly execute arbitrary code. When STA connects to AP, lbs_ibss_join_existing function will be called for STA.	linux	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.5	Not vulnerable	LIN1019-3665
1027	CVE-2019-14895	HIGH	CRITICAL	A heap-based buffer overflow was discovered in the Linux kernel, all versions 3.x.x and 4.x.x before 4.18.0, in Marvell WiFi chip driver. The flaw could occur when the station attempts a connection negotiation during the handling of the remote devices country settings. This could allow the remote device to cause a denial of service (system crash) or possibly execute arbitrary code.	linux	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.14	10.19.45.4	Not vulnerable	LIN1019-3705
1028	CVE-2019-14891	HIGH	CRITICAL	A flaw was found in cri-o, as a result of all pod-related processes being placed in the same memory cgroup. This can result in container management (conmon) processes being killed if a workload process triggers an out-of-memory (OOM) condition for the cgroup. An attacker could abuse this flaw to get host network access on an cri-o host.	cri-o	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	10.20.9.0	LIN1019-3668

	A	B	C	D	E	F	G	H	I	J	K	L	M
1029	CVE-2019-14889	HIGH	HIGH	A flaw was found with the libssh API function ssh_scp_new() in versions before 0.9.3 and before 0.8.8. When the libssh SCP client connects to a server, the scp command, which includes a user-provided path, is executed on the server-side. In case the library is used in a way where users can influence the third parameter of the function, it would become possible for an attacker to inject arbitrary commands, leading to a compromise of the remote target.	libssh2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3749
1030	CVE-2019-14870	MEDIUM	MEDIUM	All Samba versions 4.x.x before 4.9.17, 4.10.x before 4.10.11 and 4.11.x before 4.11.3 have an issue, where the S4U (MS-SFU) Kerberos delegation model includes a feature allowing for a subset of clients to be opted out of constrained delegation in any way, either S4U2Self or regular Kerberos authentication, by forcing all tickets for these clients to be non-forwardable. In AD this is implemented by a user attribute delegation_not_allowed (aka not-delegated), which translates to disallow-forwardable. However the Samba AD DC does not do that for S4U2Self and does set the forwardable flag even if the impersonated client has the not-delegated flag set.	samba	Unchanged	Investigate	Investigate	Investigate	10.18.44.14	10.19.45.3	Not vulnerable	LIN1019-3746
1031	CVE-2019-14869	MEDIUM	HIGH	A flaw was found in all versions of ghostscript 9.x before 9.50, where the `.charkeys` procedure, where it did not properly secure its privileged calls, enabling scripts to bypass `-dSAFER` restrictions. An attacker could abuse this flaw by creating a specially crafted PostScript file that could escalate privileges within the Ghostscript and access files outside of restricted areas or execute commands.	ghostscript	Unchanged	8.0.0.32	9.0.0.25	10.17.41.19	10.18.44.13	10.19.45.2	Not vulnerable	LIN1019-3475
1032	CVE-2019-14866	MEDIUM	HIGH	In all versions of cpio before 2.13 does not properly validate input files when generating TAR archives. When cpio is used to create TAR archives from paths an attacker can write to, the resulting archive may contain files with permissions the attacker did not have or in paths he did not have access to. Extracting those archives from a high-privilege user without carefully reviewing them may lead to the compromise of the system.	cpio	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.16	10.19.45.6	Not vulnerable	LIN1019-3897
1033	CVE-2019-14861	LOW	MEDIUM	All Samba versions 4.x.x before 4.9.17, 4.10.x before 4.10.11 and 4.11.x before 4.11.3 have an issue, where the (poorly named) dnsserver RPC pipe provides administrative facilities to modify DNS records and zones. Samba, when acting as an AD DC, stores DNS records in LDAP. In AD, the default permissions on the DNS partition allow creation of new records by authenticated users. This is used for example to allow machines to self-register in DNS. If a DNS record was created that case-insensitively matched the name of the zone, the ldb_qsort() and dns_name_compare() routines could be confused into reading memory prior to the list of DNS entries when responding to DnssrvEnumRecords() or DnssrvEnumRecords2() and so following invalid memory as a pointer.	samba	Unchanged	Investigate	Investigate	Investigate	10.18.44.14	10.19.45.3	Not vulnerable	LIN1019-3747
1034	CVE-2019-14859	MEDIUM	CRITICAL	A flaw was found in all python-ecdsa versions before 0.13.3, where it did not correctly verify whether signatures used DER encoding. Without this verification, a malformed signature could be accepted, making the signature malleable. Without proper verification, an attacker could use a malleable signature to create false transactions.	python-ecdsa	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3901
1035	CVE-2019-14855	MEDIUM	HIGH	A flaw was found in the way certificate signatures could be forged using collisions found in the SHA-1 algorithm. An attacker could use this weakness to create forged certificate signatures. This issue affects GnuPG versions before 2.2.18.	gnupg	Unchanged	Investigate	9.0.0.25	10.17.41.20	10.18.44.16	10.19.45.6	Not vulnerable	LIN1019-4159
1036	CVE-2019-14847	MEDIUM	MEDIUM	A flaw was found in samba 4.0.0 before samba 4.9.15 and samba 4.10.x before 4.10.10. An attacker can crash AD DC LDAP server via dirsync resulting in denial of service. Privilege escalation is not possible with this issue.	samba	Unchanged	Investigate	Investigate	10.17.41.19	10.18.44.12	10.19.45.2	Not vulnerable	LIN1019-3295
1037	CVE-2019-14842	HIGH	CRITICAL	Structured reply is a feature of the newstyle NBD protocol allowing the server to send a reply in chunks. A bounds check which was supposed to test for chunk offsets smaller than the beginning of the request did not work because of signed/unsigned confusion. If one of these chunks contains a negative offset then data under control of the server is written to memory before the read buffer supplied by the client. If the read buffer is located on the stack then this allows the stack return address from nbd_pread() to be trivially modified, allowing arbitrary code execution under the control of the server. If the buffer is located on the heap then other memory objects before the buffer can be overwritten, which again would usually lead to arbitrary code execution.	nbd	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3667
1038	CVE-2019-14835	High	HIGH	A buffer overflow flaw was found, in versions from 2.6.34 to 5.2.x, in the way Linux kernel's vhost functionality that translates virtqueue buffers to IOVs, logged the buffer descriptors during migration. A privileged guest user able to pass descriptors with invalid length to the host when migration is underway, could use this flaw to increase their privileges on the host.	linux	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.12	Not vulnerable	Not vulnerable	LIN1018-4953
1039	CVE-2019-14834	MEDIUM	MEDIUM	A vulnerability was found in dnsmasq before version 2.81, where the memory leak allows remote attackers to cause a denial of service (memory consumption) via vectors involving DHCP response creation.	dnsmasq	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.14	10.19.45.4	10.20.9.0	LIN1019-3896

	A	B	C	D	E	F	G	H	I	J	K	L	M
1040	CVE-2019-14833	MEDIUM	MEDIUM	A flaw was found in Samba, all versions starting samba 4.5.0 before samba 4.9.15, samba 4.10.10, samba 4.11.2, in the way it handles a user password change or a new password for a samba user. The Samba Active Directory Domain Controller can be configured to use a custom script to check for password complexity. This configuration can fail to verify password complexity when non-ASCII characters are used in the password, which could lead to weak passwords being set for samba users, making it vulnerable to dictionary attacks.	samba	Unchanged	Investigate	Investigate	10.17.41.19	10.18.44.12	10.19.45.2	Not vulnerable	LIN1019-3296
1041	CVE-2019-14821	High	HIGH	An out-of-bounds access issue was found in the Linux kernel, all versions through 5.3, in the way Linux kernel's KVM hypervisor implements the Coalesced MMIO write operation. It operates on an MMIO ring buffer 'struct kvm_coalesced_mmio' object, wherein write indices 'ring->first' and 'ring->last' value could be supplied by a host user-space process. An unprivileged host user or process with access to '/dev/kvm' device could use this flaw to crash the host kernel, resulting in a denial of service or potentially escalating privileges on the system.	linux	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.12	Not vulnerable	Not vulnerable	LIN1018-4954
1042	CVE-2019-14818	MEDIUM	HIGH	A flaw was found in all dpdk version 17.x.x before 17.11.8, 16.x.x before 16.11.10, 18.x.x before 18.11.4 and 19.x.x before 19.08.1 where a malicious master, or a container with access to vhost_user socket, can send specially crafted VRING_SET_NUM messages, resulting in a memory leak including file descriptors. This flaw could lead to a denial of service condition.	dpdk	Unchanged	Investigate	Investigate	Investigate	Investigate	Investigate	Not vulnerable	LIN1019-3468
1043	CVE-2019-14817	Medium	HIGH	A flaw was found in, ghostscript versions prior to 9.28, in the .pdfexectoken and other procedures where it did not properly secure its privileged calls, enabling scripts to bypass `-dSAFER` restrictions. A specially crafted PostScript file could disable security protection and then have access to the file system, or execute arbitrary commands.	ghostscript	Unchanged	Investigate	Investigate	10.17.41.20	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4832

1096	CVE-2019-13962	High	CRITICAL	lavc_CopyPicture in modules/codec/avcodec/video.c in VideoLAN VLC media player through 3.0.7 has a heap-based buffer over-read because it does not properly validate the width and height.	vlc	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4462
1097	CVE-2019-13960	MEDIUM	MEDIUM	** DISPUTED ** In libjpeg-turbo 2.0.2, a large amount of memory can be used during processing of an invalid progressive JPEG image containing incorrect width and height values in the image header. NOTE: the vendor's expectation, for use cases in which this memory usage would be a denial of service, is that the application should interpret libjpeg warnings as fatal errors (aborting decompression) and/or set limits on resource consumption or image sizes.	libjpeg-turbo	Unchanged	Investigate	Investigate	Investigate	Investigate	Not vulnerable	Not vulnerable	LIN1019-1858
1098	CVE-2019-1387	MEDIUM	HIGH	An issue was found in Git before v2.24.1, v2.23.1, v2.22.2, v2.21.1, v2.20.2, v2.19.3, v2.18.2, v2.17.3, v2.16.6, v2.15.4, and v2.14.6. Recursive clones are currently affected by a vulnerability that is caused by too-lax validation of submodule names, allowing very targeted attacks via remote code execution in recursive clones.	git	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	10.19.45.6	Not vulnerable	LIN1019-3768
1099	CVE-2019-13648	Medium	MEDIUM	In the Linux kernel through 5.2.1 on the powerpc platform, when hardware transactional memory is disabled, a local user can cause a denial of service (TM Bad Thing exception and system crash) via a sigreturn() system call that sends a crafted signal frame. This affects arch/powerpc/kernel/signal_32.c and arch/powerpc/kernel/signal_64.c.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.18	10.18.44.10	Not vulnerable	Not vulnerable	LIN1018-4461
1100	CVE-2019-13638	HIGH	HIGH	GNU patch through 2.7.6 is vulnerable to OS shell command injection that can be exploited by opening a crafted patch file that contains an ed style diff payload with shell metacharacters. The ed editor does not need to be present on the vulnerable system. This is different from CVE-2018-1000156.	patch	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.10	10.19.45.1	Not vulnerable	LIN1018-4539
1101	CVE-2019-13636	Medium	MEDIUM	In GNU patch through 2.7.6, the following of symlinks is mishandled in certain cases other than input files. This affects inp.c and util.c.	patch	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.10	Not vulnerable	Not vulnerable	LIN1018-4457
1102	CVE-2019-13631	Medium	MEDIUM	In parse_hid_report_descriptor in drivers/input/tablet/gtco.c in the Linux kernel through 5.2.1, a malicious USB device can send an HID report that triggers an out-of-bounds write during generation of debugging messages.	linux	Unchanged	Investigate	9.0.0.22	10.17.41.17	10.18.44.10	Not vulnerable	Not vulnerable	LIN1018-4458

	A	B	C	D	E	F	G	H	I	J	K	L	M
1103	CVE-2019-13628	Low	MEDIUM	wolfSSL and wolfCrypt 4.0.0 and earlier (when configured without --enable-fpecc, --enable-sp, or --enable-sp-math) contain a timing side channel in ECDSA signature generation. This allows a local attacker, able to precisely measure the duration of signature operations, to infer information about the nonces used and potentially mount a lattice attack to recover the private key used. The issue occurs because ecc.c scalar multiplication might leak the bit length.	wolfssl	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-5012
1104	CVE-2019-13627	Medium	HIGH	It was discovered that there was a ECDSA timing attack in the libgcrypt20 cryptographic library. Version affected: 1.8.4-5, 1.7.6-2+deb9u3, and 1.6.3-2+deb8u4. Versions fixed: 1.8.5-2 and 1.6.3-2+deb8u7.	libgcrypt	Updated	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	10.19.45.6	10.20.15.0	LIN1018-5046
1105	CVE-2019-13626	Medium	MEDIUM	SDL (Simple DirectMedia Layer) 2.x through 2.0.9 has a heap-based buffer over-read in Fill_IMA_ADPCM_block, caused by an integer overflow in IMA_ADPCM_decode() in audio/SDL_wave.c.	libsdl	Unchanged	Investigate	Investigate	Investigate	Investigate	10.19.45.1	Not vulnerable	LIN1018-4452
1106	CVE-2019-13619	Medium	HIGH	In Wireshark 3.0.0 to 3.0.2, 2.6.0 to 2.6.9, and 2.4.0 to 2.4.15, the ASN.1 BER dissector and related dissectors could crash. This was addressed in epan/asn1.c by properly restricting buffer increments.	wireshark	Unchanged	Not vulnerable	9.0.0.24	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4459
1107	CVE-2019-13617	Medium	MEDIUM	njs through 0.3.3, used in NGINX, has a heap-based buffer over-read in nxt_vsprintf in nxt/nxt_sprintf.c during error handling, as demonstrated by an njs_regexp_literal call that leads to an njs_parser_lexer_error call and then an njs_parser_scope_error call.	nginx	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4447
1108	CVE-2019-13616	Medium	HIGH	SDL (Simple DirectMedia Layer) through 1.2.15 and 2.x through 2.0.9 has a heap-based buffer over-read in BlitNtoN in video/SDL_blit_N.c when called from SDL_SoftBlit in video/SDL_blit.c.	libsdl	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.12	10.19.45.1	Not vulnerable	LIN1018-4448
1109	CVE-2019-13615	Medium	MEDIUM	libebml before 1.3.6, as used in the MKV module in VideoLAN VLC Media Player binaries before 3.0.3, has a heap-based buffer over-read in EbmlElement::FindNextElement.	libebml	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4449
1110	CVE-2019-13602	Medium	HIGH	An Integer Underflow in MP4_EIA608_Convert() in modules/demux/mp4/mp4.c in VideoLAN VLC media player through 3.0.7.1 allows remote attackers to cause a denial of service (heap-based buffer overflow and crash) or possibly have unspecified other impact via a crafted .mp4 file.	vlc	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4441
1111	CVE-2019-13590	MEDIUM	HIGH	An issue was discovered in libsox.a in SoX 14.4.2. In sox-fmt.h (startread function), there is an integer overflow on the result of integer addition (wraparound to 0) fed into the lsx_calloc macro that wraps malloc. When a NULL pointer is returned, it is used without a prior check that it is a valid pointer, leading to a NULL pointer dereference on lsx_readbuf in formats_i.c.	sox	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4431
1112	CVE-2019-13565	MEDIUM	HIGH	An issue was discovered in OpenLDAP 2.x before 2.4.48. When using SASL authentication and session encryption, and relying on the SASL security layers in slapd access controls, it is possible to obtain access that would otherwise be denied via a simple bind for any identity covered in those ACLs. After the first SASL bind is completed, the sasl_ssf value is retained for all new non-SASL connections. Depending on the ACL configuration, this can affect different types of operations (searches, modifications, etc.). In other words, a successful authorization step completed by one user affects the authorization requirement for a different user.	openldap	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.12	Not vulnerable	Not vulnerable	LIN1018-4540
1113	CVE-2019-1348	LOW	LOW	An issue was found in Git before v2.24.1, v2.23.1, v2.22.2, v2.21.1, v2.20.2, v2.19.3, v2.18.2, v2.17.3, v2.16.6, v2.15.4, and v2.14.6. The --export-marks option of git fast-import is exposed also via the in-stream command feature export-marks=... and it allows overwriting arbitrary paths.	git	Unchanged	Investigate	Investigate	Investigate	Investigate	10.19.45.6	Not vulnerable	LIN1019-3760
1114	CVE-2019-13456	LOW	MEDIUM	In FreeRADIUS 3.0 through 3.0.19, on average 1 in every 2048 EAP-pwd handshakes fails because the password element cannot be found within 10 iterations of the hunting and pecking loop. This leaks information that an attacker can use to recover the password of any user. This information leakage is similar to the Dragonblood attack and CVE-2019-9494.	freeradius	Unchanged	8.0.0.32	9.0.0.25	10.17.41.19	10.18.44.14	10.19.45.3	Not vulnerable	LIN1019-3753

1137	CVE-2019-13295	Medium	HIGH	ImageMagick 7.0.8-50 Q16 has a heap-based buffer over-read at MagickCore/threshold.c in AdaptiveThresholdImage because a width of zero is mishandled.	imagemagick	Unchanged	8.0.0.31	9.0.0.22	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4410
1138	CVE-2019-13272	High	HIGH	In the Linux kernel before 5.1.17, ptrace_link in kernel/ptrace.c mishandles the recording of the credentials of a process that wants to create a ptrace relationship, which allows local users to obtain root access by leveraging certain scenarios with a parent-child process relationship, where a parent drops privileges and calls execve (potentially allowing control by an attacker). One contributing factor is an object lifetime issue (which can also cause a panic). Another contributing factor is incorrect marking of a ptrace relationship as privileged, which is exploitable through (for example) Polkit's pkexec helper with PTRACE_TRACEME. NOTE: SELinux deny_ptrace might be a usable workaround in some environments.	linux	Unchanged	Not vulnerable	9.0.0.22	10.17.41.17	10.18.44.10	Not vulnerable	Not vulnerable	LIN1018-4450
1139	CVE-2019-13233	Medium	HIGH	In arch/x86/lib/insn-eval.c in the Linux kernel before 5.1.9, there is a use-after-free for access to an LDT entry because of a race condition between modify_ldt() and a #BR exception for an MPX bounds violation.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.10	Not vulnerable	Not vulnerable	LIN1018-4389
1140	CVE-2019-13232	Medium	HIGH	Info-ZIP UnZip 6.0 mishandles the overlapping of files inside a ZIP container, leading to denial of service (resource consumption), aka a better zip bomb issue.	unzip	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.12	Not vulnerable	Not vulnerable	LIN1018-4392
1141	CVE-2019-13164	Medium	HIGH	qemu-bridge-helper.c in QEMU 4.0.0 does not ensure that a network interface name (obtained from bridge.conf or a --br=bridge option) is limited to the IFNAMSIZ size, which can lead to an ACL bypass.	qemu	Unchanged	8.0.0.31	9.0.0.23	10.17.41.18	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4383
1142	CVE-2019-13147	Medium	MEDIUM	In Audio File Library (aka audiofile) 0.3.6, there exists one NULL pointer dereference bug in ulaw2linear_buf in G711.cpp in libmodules.a that allows an attacker to cause a denial of service via a crafted file.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4381
1143	CVE-2019-13139	MEDIUM	HIGH	In Docker before 18.09.4, an attacker who is capable of supplying or manipulating the build path for the docker build command would be able to gain command execution. An issue exists in the way docker build processes remote git URLs, and results in command injection into the underlying git clone command, leading to code execution in the context of the user executing the docker build command. This occurs because git ref can be misinterpreted as a flag.	docker	Unchanged	Investigate	Investigate	Investigate	Investigate	Not vulnerable	Not vulnerable	LIN1018-4753
1144	CVE-2019-13137	Medium	MEDIUM	ImageMagick before 7.0.8-50 has a memory leak vulnerability in the function ReadPSImage in coders/ps.c.	imagemagick	Unchanged	8.0.0.31	9.0.0.22	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4374

	A	B	C	D	E	F	G	H	I	J	K	L	M
1149	CVE-2019-13132	HIGH	CRITICAL	In ZeroMQ libzmq before 4.0.9, 4.1.x before 4.1.7, and 4.2.x before 4.3.2, a remote, unauthenticated client connecting to a libzmq application, running with a socket listening with CURVE encryption/authentication enabled, may cause a stack overflow and overwrite the stack with arbitrary data, due to a buffer overflow in the library. Users running public servers with the above configuration are highly encouraged to upgrade as soon as possible, as there are no known mitigations.	zeromq	Unchanged	8.0.0.31	9.0.0.22	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4442
1150	CVE-2019-13118	Medium	HIGH	In numbers.c in libxslt 1.1.33, a type holding grouping characters of an xsl:number instruction was too narrow and an invalid character/length combination could be passed to xsltNumberFormatDecimal, leading to a read of uninitialized stack data.	libxslt	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.9	Not vulnerable	Not vulnerable	LIN1018-4379
1151	CVE-2019-13117	Medium	HIGH	In numbers.c in libxslt 1.1.33, an xsl:number with certain format strings could lead to a uninitialized read in xsltNumberFormatInsertNumbers. This could allow an attacker to discern whether a byte on the stack contains the characters A, a, I, i, or 0, or any other character.	libxslt	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.9	Not vulnerable	Not vulnerable	LIN1018-4380
1152	CVE-2019-13115	Medium	HIGH	In libssh2 before 1.9.0, kex_method_diffie_hellman_group_exchange_sha256_key_exchange in kex.c has an integer overflow that could lead to an out-of-bounds read in the way packets are read from the server. A remote attacker who compromises a SSH server may be able to disclose sensitive information or cause a denial of service condition on the client system when a user connects to the server. This is related to an _libssh2_check_length mistake, and is different from the various issues fixed in 1.8.1, such as CVE-2019-3855.	libssh2	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4451
1153	CVE-2019-13106	HIGH	HIGH	Das U-Boot versions 2016.09 through 2019.07-rc4 can memset() too much data while reading a crafted ext4 filesystem, which results in a stack buffer overflow and likely code execution.	u-boot	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	10.19.45.1	Not vulnerable	LIN1018-4631
1154	CVE-2019-13105	MEDIUM	HIGH	Das U-Boot versions 2019.07-rc1 through 2019.07-rc4 can double-free a cached block of data when listing files in a crafted ext4 filesystem.	u-boot	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	10.19.45.1	Not vulnerable	LIN1018-4630
1155	CVE-2019-13104	MEDIUM	HIGH	In Das U-Boot versions 2016.11-rc1 through 2019.07-rc4, an underflow can cause memcpy() to overwrite a very large amount of data (including the whole stack) while reading a crafted ext4 filesystem.	u-boot	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	10.19.45.1	Not vulnerable	LIN1018-4624
1156	CVE-2019-13103	MEDIUM	CRITICAL	A crafted self-referential DOS partition table will cause all Das U-Boot versions through 2019.07-rc4 to infinitely recurse, causing the stack to grow infinitely and eventually either crash or overwrite other data.	u-boot	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	10.19.45.1	Not vulnerable	LIN1018-4576
1157	CVE-2019-13067	HIGH	CRITICAL	njs through 0.3.3, used in NGINX, has a buffer over-read in nxt_utf8_decode in nxt/nxt_utf8.c. This issue occurs after the fix for CVE-2019-12207 is in place.	nginx	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4369
1158	CVE-2019-13057	LOW	MEDIUM	An issue was discovered in the server in OpenLDAP before 2.4.48. When the server administrator delegates rootDN (database admin) privileges for certain databases but wants to maintain isolation (e.g., for multi-tenant deployments), slapd does not properly stop a rootDN from requesting authorization as an identity from another database during a SASL bind or with a proxyAuthz (RFC 4370) control. (It is not a common configuration to deploy a system where the server administrator and a DB administrator enjoy different levels of trust.)	openldap	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.12	Not vulnerable	Not vulnerable	LIN1018-4541
1159	CVE-2019-13050	MEDIUM	HIGH	Interaction between the sks-keyserver code through 1.2.0 of the SKS keyserver network, and GnuPG through 2.2.16, makes it risky to have a GnuPG keyserver configuration line referring to a host on the SKS keyserver network. Retrieving data from this network may cause a persistent denial of service, because of a Certificate Spamming Attack.	gnupg	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	LIN1018-4370
1160	CVE-2019-13045	MEDIUM	HIGH	Irssi before 1.0.8, 1.1.x before 1.1.3, and 1.2.x before 1.2.1, when SASL is enabled, has a use after free when sending SASL login to the server.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4371
1161	CVE-2019-13012	MEDIUM	HIGH	The keyfile settings backend in GNOME GLib (aka glib2.0) before 2.59.1 creates directories using g_file_make_directory_with_parents (kfsb->dir, NULL, NULL) and files using g_file_replace_contents (kfsb->file, contents, length, NULL, FALSE, G_FILE_CREATE_REPLACE_DESTINATION, NULL, NULL, NULL). Consequently, it does not properly restrict directory (and file) permissions. Instead, for directories, 0777 permissions are used; for files, default file permissions are used. This is similar to CVE-2019-12450.	glib-2.0	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.9	Not vulnerable	Not vulnerable	LIN1018-4368
1162	CVE-2019-12984	Medium	MEDIUM	A NULL pointer dereference vulnerability in the function nfc_genl_deactivate_target() in net/nfc/netlink.c in the Linux kernel before 5.1.13 can be triggered by a malicious user-mode program that omits certain NFC attributes, leading to denial of service.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4362
1163	CVE-2019-12979	Medium	HIGH	ImageMagick 7.0.8-34 has a use of uninitialized value vulnerability in the SyncImageSettings function in MagickCore/image.c. 1174	CVE-2019-12904	Medium	MEDIUM	In Libgcrypt 1.8.4, the C implementation of AES is vulnerable to a flush-and-reload side-channel attack because physical addresses are available to other processes. (The C implementation is used on platforms where an assembly-language implementation is unavailable.)	libgcrypt	Unchanged	Investigate	9.0.0.22	10.17.41.17	10.18.44.9	Not vulnerable	Not vulnerable	LIN1018-4317
1175	CVE-2019-12900	High	CRITICAL	BZ2_decompress in decompress.c in bzip2 through 1.0.6 has an out-of-bounds write when there are many selectors.	bzip2	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.9	10.19.45.6	Not vulnerable	LIN1018-4316
1176	CVE-2019-12881	Medium	HIGH	i915_gem_userptr_get_pages in drivers/gpu/drm/i915/i915_gem_userptr.c in the Linux kernel 4.15.0 on Ubuntu 18.04.2 allows local users to cause a denial of service (NULL pointer dereference and BUG) or possibly have unspecified other impact via crafted ioctl calls to /dev/dri/card0.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4304
1177	CVE-2019-12874	High	CRITICAL	An issue was discovered in zlib_decompress_extra in modules/demux/mkv/util.cpp in VideoLAN VLC media player 3.x through 3.0.7. The Matroska demuxer, while parsing a malformed MKV file type, has a double free.	vlc	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4305
1178	CVE-2019-12840	High	HIGH	In Webmin through 1.910, any user authorized to the Package Updates module can execute arbitrary commands with root privileges via the data parameter to update.cgi.	webmin	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4283
1179	CVE-2019-12819	Low	MEDIUM	An issue was discovered in the Linux kernel before 5.0. The function __mdiobus_register() in drivers/net/phy/mdio_bus.c calls put_device(), which will trigger a fixed_mdio_bus_init use-after-free. This will cause a denial of service.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.9	Not vulnerable	Not vulnerable	LIN1018-4284
1180	CVE-2019-12818	Medium	HIGH	An issue was discovered in the Linux kernel before 4.20.15. The nfc_llcp_build_tlv function in net/nfc/llcp_commands.c may return NULL. If the caller does not check for this, it will trigger a NULL pointer dereference. This will cause denial of service. This affects nfc_llcp_build_gb in net/nfc/llcp_core.c.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4285
1181	CVE-2019-12817	Medium	HIGH	arch/powerpc/mm/ mmu_context_book3s64.c in the Linux kernel before 5.1.15 for powerpc has a bug where unrelated processes may be able to read/write to one another's virtual memory under certain conditions via an mmap above 512 TB. Only a subset of powerpc systems are affected.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.9	Not vulnerable	Not vulnerable	LIN1018-4343
1182	CVE-2019-12816	Medium	HIGH	Modules.cpp in ZNC before 1.7.4-rc1 allows remote authenticated non-admin users to escalate privileges and execute arbitrary code by loading a module with a crafted name.	znc	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4286
1183	CVE-2019-12815	High	CRITICAL	An arbitrary file copy vulnerability in mod_copy in ProFTPD up to 1.3.5b allows for remote code execution and information disclosure without authentication, a related issue to CVE-2015-3306.	proftpd	Unchanged	8.0.0.31	9.0.0.22	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4557
1184	CVE-2019-12795	Medium	HIGH	daemon/gvfsdaemon.c in gvfsd from GNOME gvfs before 1.38.3, 1.40.x before 1.40.2, and 1.41.x before 1.41.3 opened a private D-Bus server socket without configuring an authorization rule. A local attacker could connect to this server socket and issue D-Bus method calls. (Note that the server socket only accepts a single connection, so the attacker would have to discover the server and connect to the socket before its owner does.)	gvfs	Unchanged	Won't Fix	9.0.0.22	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4266
1185	CVE-2019-12779	Medium	HIGH	libqb before 1.0.5 allows local users to overwrite arbitrary files via a symlink attack, because it uses predictable filenames (under /dev/shm and /tmp) without O_EXCL.	libqb	Unchanged	Won't Fix	9.0.0.22	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4252

	A	B	C	D	E	F	G	H	I	J	K	L	M
1186	CVE-2019-12749	Low	HIGH	dbus before 1.10.28, 1.12.x before 1.12.16, and 1.13.x before 1.13.12, as used in DBusServer in Canonical Upstart in Ubuntu 14.04 (and in some, less common, uses of dbus-daemon), allows cookie spoofing because of symlink mishandling in the reference implementation of DBUS_COOKIE_SHA1 in the libdbus library. (This only affects the DBUS_COOKIE_SHA1 authentication mechanism.) A malicious client with write access to its own home directory could manipulate a ~/.dbus-keyrings symlink to cause a DBusServer with a different uid to read and write in unintended locations. In the worst case, this could result in the DBusServer reusing a cookie that is known to the malicious client, and treating that cookie as evidence that a subsequent client connection came from an attacker-chosen uid, allowing authentication bypass.	dbus	Unchanged	8.0.0.31	9.0.0.22	Vulnerable	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4265
1187	CVE-2019-12735	High	HIGH	getchar.c in Vim before 8.1.1365 and Neovim before 0.3.6 allows remote attackers to execute arbitrary OS commands via the :source! command in a modeline, as demonstrated by execute in Vim, and assert_fails or nvim_input in Neovim.	vim	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4242
1188	CVE-2019-12730	High	CRITICAL	aa_read_header in libavformat/aadec.c in FFmpeg before 3.2.14 does not check for sscanf failure and consequently allows use of uninitialized variables.	ffmpeg	Unchanged	Won't Fix	9.0.0.24	10.17.41.19	10.18.44.12	Not vulnerable	Not vulnerable	LIN1018-4253
1189	CVE-2019-12625	MEDIUM	HIGH	ClamAV versions prior to 0.101.3 are susceptible to a zip bomb vulnerability where an unauthenticated attacker can cause a denial of service condition by sending crafted messages to an affected system.	clamav	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Investigate	LIN1019-3298
1190	CVE-2019-12616	Medium	MEDIUM	An issue was discovered in phpMyAdmin before 4.9.0. A vulnerability was found that allows an attacker to trigger a CSRF attack against a phpMyAdmin user. The attacker can trick the user, for instance through a broken <img> tag pointing at the victim's phpMyAdmin database, and the attacker can potentially deliver a payload (such as a specific INSERT or DELETE statement) to the victim.	phpmyadmin	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4243
1191	CVE-2019-12615	High	HIGH	An issue was discovered in get_vdev_port_node_info in arch/sparc/kernel/mdesc.c in the Linux kernel through 5.1.6. There is an unchecked kstrdup_const of node_info->vdev_port.name, which might allow an attacker to cause a denial of service (NULL pointer dereference and system crash).	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.9	Not vulnerable	Not vulnerable	LIN1018-4245
1192	CVE-2019-12614	High	HIGH	An issue was discovered in dlpar_parse_cc_property in arch/powerpc/platforms/pseries/dlpar.c in the Linux kernel through 5.1.6. There is an unchecked kstrdup of prop->name, which might allow an attacker to cause a denial of service (NULL pointer dereference and system crash).	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.10	Not vulnerable	Not vulnerable	LIN1018-4246
1193	CVE-2019-12585	High	CRITICAL	Apcupsd 0.3.91_5, as used in pfSense through 2.4.4-RELEASE-p3 and other products, has an Arbitrary Command Execution issue in apcupsd_status.php.	apcupsd	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-8644
1194	CVE-2019-12584	Medium	MEDIUM	Apcupsd 0.3.91_5, as used in pfSense through 2.4.4-RELEASE-p3 and other products, has an XSS issue in apcupsd_status.php.	apcupsd	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-8643
1195	CVE-2019-12529	MEDIUM	MEDIUM	An issue was discovered in Squid 2.x through 2.7.STABLE9, 3.x through 3.5.28, and 4.x through 4.7. When Squid is configured to use Basic Authentication, the Proxy-Authorization header is parsed via uudecode. uudecode determines how many bytes will be decoded by iterating over the input and checking its table. The length is then used to start decoding the string. There are no checks to ensure that the length it calculates isn't greater than the input buffer. This leads to adjacent memory being decoded as well. An attacker would not be able to retrieve the decoded data unless the Squid maintainer had configured the display of usernames on error pages.	squid	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4428
1196	CVE-2019-12528	MEDIUM	HIGH	An issue was discovered in Squid before 4.10. It allows a crafted FTP server to trigger disclosure of sensitive information from heap memory, such as information associated with other users' sessions or non-Squid processes.	squid	Unchanged	8.0.0.33	9.0.0.25	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-4005
1197	CVE-2019-12527	MEDIUM	HIGH	An issue was discovered in Squid 4.0.23 through 4.7. When checking Basic Authentication with HttpHeader::getAuth, Squid uses a global buffer to store the decoded data. Squid does not check that the decoded length isn't greater than the buffer, leading to a heap-based buffer overflow with user controlled data.	squid	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4429
1198	CVE-2019-12526	HIGH	CRITICAL	An issue was discovered in Squid before 4.9. URN response handling in Squid suffers from a heap-based buffer overflow. When receiving data from a remote server in response to an URN request, Squid fails to ensure that the response can fit within the buffer. This leads to attacker controlled data overflowing in the heap.	squid	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3658
1199	CVE-2019-12525	HIGH	CRITICAL	An issue was discovered in Squid 3.3.9 through 3.5.28 and 4.x through 4.7. When Squid is configured to use Digest authentication, it parses the header Proxy-Authorization. It searches for certain tokens such as domain, uri, and qop. Squid checks if this token's value starts with a quote and ends with one. If so, it performs a memcpy of its length minus 2. Squid never checks whether the value is just a single quote (which would satisfy its requirements), leading to a memcpy of its length minus 1.	squid	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4430
1200	CVE-2019-12523	MEDIUM	CRITICAL	An issue was discovered in Squid before 4.9. When handling a URN request, a corresponding HTTP request is made. This HTTP request doesn't go through the access checks that incoming HTTP requests go through. This causes all access checks to be bypassed and allows access to restricted HTTP servers, e.g., an attacker can connect to HTTP servers that only listen on localhost.	squid	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-3659

	A	B	C	D	E	F	G	H	I	J	K	L	M
1201	CVE-2019-12456	High	HIGH	An issue was discovered in the MPT3COMMAND case in _ctl_ioctl_main in drivers/scsi/mpt3sas/mpt3sas_ctl.c in the Linux kernel through 5.1.5. It allows local users to cause a denial of service or possibly have unspecified other impact by changing the value of ioc_number between two kernel reads of that value, aka a double fetch vulnerability.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.10	10.19.45.1	10.20.3.0	LIN1018-4279

1229	CVE-2019-12111	Medium	HIGH	A Denial Of Service vulnerability in MiniUPnP MiniUPnPd through 2.1 exists due to a NULL pointer dereference in copyIPv6IfDifferent in pcpserver.c.	miniupnpd	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4127
1230	CVE-2019-12110	Medium	HIGH	An AddPortMapping Denial Of Service vulnerability in MiniUPnP MiniUPnPd through 2.1 exists due to a NULL pointer dereference in upnpredirect.c.	miniupnpd	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4126
1231	CVE-2019-12109	Medium	HIGH	A Denial Of Service vulnerability in MiniUPnP MiniUPnPd through 2.1 exists due to a NULL pointer dereference in GetOutboundPinholeTimeout in upnpsoap.c for rem_port.	miniupnpd	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4125
1232	CVE-2019-12108	Medium	HIGH	A Denial Of Service vulnerability in MiniUPnP MiniUPnPd through 2.1 exists due to a NULL pointer dereference in GetOutboundPinholeTimeout in upnpsoap.c for int_port.	miniupnpd	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4124
1233	CVE-2019-12107	Medium	HIGH	The upnp_event_prepare function in upnpevents.c in MiniUPnP MiniUPnPd through 2.1 allows a remote attacker to leak information from the heap due to improper validation of an snprintf return value.	miniupnpd	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4123
1234	CVE-2019-12068	Medium	HIGH	In QEMU 1:4.1-1, 1:2.1+dfsg-12+deb8u6, 1:2.8+dfsg-6+deb9u8, 1:3.1+dfsg-8~deb10u1, 1:3.1+dfsg-8+deb10u2, and 1:2.1+dfsg-12+deb8u12 (fixed), when executing script in lsi_execute_script(), the LSI scsi adapter emulator advances 's->dsp' index to read next opcode. This can lead to an infinite loop if the next opcode is empty. Move the existing loop exit after 10k iterations so that it covers no-op opcodes as well.	qemu	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	10.19.45.1	Not vulnerable	LIN1018-5045
1235	CVE-2019-11884	Low	LOW	The do_hidp_sock_ioctl function in net/bluetooth/hidp/sock.c in the Linux kernel before 5.0.15 allows a local user to obtain potentially sensitive information from kernel stack memory via a HIDPCONNADD command, because a name field may not end with a '\0' character.	linux	Unchanged	8.0.0.31	9.0.0.21	10.17.41.16	10.18.44.7	Not vulnerable	Not vulnerable	LIN1018-4061
1236	CVE-2019-11873	High	CRITICAL	wolfSSL 4.0.0 has a Buffer Overflow in DoPreSharedKeys in tls13.c when a current identity size is greater than a client identity size. An attacker sends a crafted hello client packet over the network to a TLSv1.3 wolfSSL server. The length fields of the packet: record length, client hello length, total extensions length, PSK extension length, total identity length, and identity length contain their maximum value which is 2^16. The identity data field of the PSK extension of the packet contains the attack data, to be stored in the undefined memory (RAM) of the server. The size of the data is about 65 kB. Possibly the attacker can perform a remote code execution attack.	wolfssl	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4143
1237	CVE-2019-11833	LOW	MEDIUM	fs/ext4/extents.c in the Linux kernel through 5.1.2 does not zero out the unused memory region in the extent tree block, which might allow local users to obtain sensitive information by reading uninitialized data in the filesystem.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4080
1238	CVE-2019-11815	High	HIGH	An issue was discovered in rds_tcp_kill_sock in net/rds/tcp.c in the Linux kernel before 5.0.8. There is a race condition leading to a use-after-free, related to net namespace cleanup.	linux	Unchanged	Not vulnerable	9.0.0.21	10.17.41.16	10.18.44.7	Not vulnerable	Not vulnerable	LIN1018-4051
1239	CVE-2019-11811	High	CRITICAL	An issue was discovered in the Linux kernel before 5.0.4. There is a use-after-free upon attempted read access to /proc/ioports after the ipmi_si module is removed, related to drivers/char/ipmi/ipmi_si_intf.c, drivers/char/ipmi/ipmi_si_mem_io.c, and drivers/char/ipmi/ipmi_si_port_io.c.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.7	Not vulnerable	Not vulnerable	LIN1018-4037
1240	CVE-2019-11810	High	HIGH	An issue was discovered in the Linux kernel before 5.0.7. A NULL pointer dereference can occur when megasas_create_frame_pool() fails in megasas_alloc_cmds() in drivers/scsi/megaraid/megaraid_sas_base.c. This causes a Denial of Service, related to a use-after-free.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.7	Not vulnerable	Not vulnerable	LIN1018-4038

	A	B	C	D	E	F	G	H	I	J	K	L	M
1241	CVE-2019-11779	Medium	MEDIUM	In Eclipse Mosquitto 1.5.0 to 1.6.5 inclusive, if a malicious MQTT client sends a SUBSCRIBE packet containing a topic that consists of approximately 65400 or more '/' characters, i.e. the topic hierarchy separator, then a stack overflow will occur.	mosquitto	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-5053
1242	CVE-2019-11768	High	CRITICAL	An issue was discovered in phpMyAdmin before 4.9.0.1. A vulnerability was reported where a specially crafted database name can be used to trigger an SQL injection attack through the designer feature.	phpmyadmin	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4244
1243	CVE-2019-11766	High	CRITICAL	dhcp6.c in dhcpcd before 6.11.7 and 7.x before 7.2.2 has a buffer over-read in the D6_OPTION_PD_EXCLUDE feature.	dhcpcd	Unchanged	Not vulnerable	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3959
1244	CVE-2019-11690	Medium	MEDIUM	gen_rand_uuid in lib/uuid.c in Das U-Boot v2014.04 through v2019.04 lacks an srand call, which allows attackers to determine UUID values in scenarios where CONFIG_RANDOM_UUID is enabled, and Das U-Boot is relied upon for UUID values of a GUID Partition Table of a boot device.	u-boot	Unchanged	Not vulnerable	Not vulnerable	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-3964
1245	CVE-2019-11683	High	CRITICAL	udp_gro_receive_segment in net/ipv4/udp_offload.c in the Linux kernel 5.x before 5.0.13 allows remote attackers to cause a denial of service (slab-out-of-bounds memory corruption) or possibly have unspecified other impact via UDP packets with a 0 payload, because of mishandling of padded packets, aka the GRO packet of death issue.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4044
1246	CVE-2019-11599	Medium	HIGH	The coredump implementation in the Linux kernel before 5.0.10 does not use locking or other mechanisms to prevent vma layout or vma flags changes while it runs, which allows local users to obtain sensitive information, cause a denial of service, or possibly have unspecified other impact by triggering a race condition with mmget_not_zero or get_task_mm calls. This is related to fs/userfaultfd.c, mm/mmap.c, fs/proc/task_mmu.c, and drivers/infiniband/core/uverbs_main.c.	linux	Unchanged	Not vulnerable	9.0.0.22	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-3955
1247	CVE-2019-11598	Medium	HIGH	In ImageMagick 7.0.8-40 Q16, there is a heap-based buffer over-read in the function WritePNMImage of coders/pnm.c, which allows an attacker to cause a denial of service or possibly information disclosure via a crafted image file. This is related to SetGrayscaleImage in MagickCore/quantize.c.	imagemagick	Unchanged	8.0.0.31	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3953
1248	CVE-2019-11597	Medium	HIGH	In ImageMagick 7.0.8-43 Q16, there is a heap-based buffer over-read in the function WriteTIFFImage of coders/tiff.c, which allows an attacker to cause a denial of service or possibly information disclosure via a crafted image file.	imagemagick	Unchanged	8.0.0.31	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3954
1249	CVE-2019-11579	Medium	MEDIUM	dhcp.c in dhcpcd before 7.2.1 contains a 1-byte read overflow with DHO_OPTSOVERLOADED.	dhcpcd	Unchanged	Not vulnerable	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3956
1250	CVE-2019-11578	Medium	MEDIUM	auth.c in dhcpcd before 7.2.1 allowed attackers to infer secrets by performing latency attacks.	dhcpcd	Unchanged	Not vulnerable	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3957
1251	CVE-2019-11577	High	CRITICAL	dhcpcd before 7.2.1 contains a buffer overflow in dhcp6_findna in dhcp6.c when reading NA/TA addresses.	dhcpcd	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3958
1252	CVE-2019-11555	Medium	MEDIUM	The EAP-pwd implementation in hostapd (EAP server) before 2.8 and wpa_supplicant (EAP peer) before 2.8 does not validate fragmentation reassembly state properly for a case where an unexpected fragment could be received. This could result in process termination due to a NULL pointer dereference (denial of service). This affects eap_server/eap_server_pwd.c and eap_peer/eap_pwd.c.	hostapd&wpa-supplicant	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-4027
1253	CVE-2019-11500	HIGH	CRITICAL	In Dovecot before 2.2.36.4 and 2.3.x before 2.3.7.2 (and Pigeonhole before 0.5.7.2), protocol processing can fail for quoted strings. This occurs because '\0' characters are mishandled, and can lead to out-of-bounds writes and remote code execution.	dovecot	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4799
1254	CVE-2019-11499	Medium	HIGH	In the IMAP Server in Dovecot 2.3.3 through 2.3.5.2, the submission-login component crashes if AUTH PLAIN is attempted over a TLS secured channel with an unacceptable authentication message.	dovecot	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4049
1255	CVE-2019-11498	Medium	MEDIUM	WavpackSetConfiguration64 in pack_utils.c in libwavpack.a in WavPack through 5.1.0 has a Conditional jump or move depends on uninitialised value condition, which might allow attackers to cause a denial of service (application crash) via a DFF file that lacks valid sample-rate data.	wavpack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3967
1256	CVE-2019-11494	Medium	HIGH	In the IMAP Server in Dovecot 2.3.3 through 2.3.5.2, the submission-login service crashes when the client disconnects prematurely during the AUTH command.	dovecot	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4050
1257	CVE-2019-11487	High	HIGH	The Linux kernel before 5.1-rc5 allows page->_refcount reference count overflow, with resultant use-after-free issues, if about 140 GiB of RAM exists. This is related to fs/fuse/dev.c, fs/pipe.c, fs/splice.c, include/linux/mm.h, include/linux/pipe_fs_i.h, kernel/trace/trace.c, mm/gup.c, and mm/hugetlb.c. It can occur with FUSE requests.	linux	Unchanged	Vulnerable	Vulnerable	Vulnerable	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4045
1258	CVE-2019-11486	Medium	HIGH	The Siemens R3964 line discipline driver in drivers/tty/n_r3964.c in the Linux kernel before 5.0.8 has multiple race conditions.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4331
1259	CVE-2019-11479	Medium	HIGH	Jonathan Looney discovered that the Linux kernel default MSS is hard-coded to 48 bytes. This allows a remote peer to fragment TCP resend queues significantly more than if a larger MSS were enforced. A remote attacker could use this to cause a denial of service. This has been fixed in stable kernel releases 4.4.182, 4.9.182, 4.14.127, 4.19.52, 5.1.11, and is fixed in commits 967c05aee439e6e5d7d805e195b3a20ef5c433d6 and 5f3e2bf008c2221478101ee72f5cb4654b9fc363.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4296

	A	B	C	D	E	F	G	H	I	J	K	L	M
1260	CVE-2019-11478	Medium	HIGH	Jonathan Looney discovered that the TCP retransmission queue implementation in tcp_fragment in the Linux kernel could be fragmented when handling certain TCP Selective Acknowledgment (SACK) sequences. A remote attacker could use this to cause a denial of service. This has been fixed in stable kernel releases 4.4.182, 4.9.182, 4.14.127, 4.19.52, 5.1.11, and is fixed in commit f070ef2ac66716357066b683fb0baf55f8191a2e.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4295
1261	CVE-2019-11477	High	HIGH	Jonathan Looney discovered that the TCP_SKB_CB(skb)->tcp_gso_segs value was subject to an integer overflow in the Linux kernel when handling TCP Selective Acknowledgments (SACKs). A remote attacker could use this to cause a denial of service. This has been fixed in stable kernel releases 4.4.182, 4.9.182, 4.14.127, 4.19.52, 5.1.11, and is fixed in commit 3b4929f65b0d8249f19a50245cd88ed1a2f78cff.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4294
1262	CVE-2019-11472	Medium	MEDIUM	ReadXWDImage in coders/xwd.c in the XWD image parsing component of ImageMagick 7.0.8-41 Q16 allows attackers to cause a denial-of-service (divide-by-zero error) by crafting an XWD image file in which the header indicates neither LSB first nor MSB first.	imagemagick	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3933
1263	CVE-2019-11470	High	MEDIUM	The cineon parsing component in ImageMagick 7.0.8-26 Q16 allows attackers to cause a denial-of-service (uncontrolled resource consumption) by crafting a Cineon image with an incorrect claimed image size. This occurs because ReadCINImage in coders/cin.c lacks a check for insufficient image data in a file.	imagemagick	Unchanged	8.0.0.31	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3940
1264	CVE-2019-11463	Medium	MEDIUM	A memory leak in archive_read_format_zip_cleanup in archive_read_support_format_zip.c in libarchive 3.3.4-dev allows remote attackers to cause a denial of service via a crafted ZIP file because of a HAVE_LZMA_H typo. NOTE: this only affects users who downloaded the development code from GitHub. Users of the product's official releases are unaffected.	libarchive	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3968
1265	CVE-2019-11461	Medium	HIGH	An issue was discovered in GNOME Nautilus 3.30 prior to 3.30.6 and 3.32 prior to 3.32.1. A compromised thumbnailer may escape the bubblewrap sandbox used to confine thumbnailers by using the TIOCSTI ioctl to push characters into the input buffer of the thumbnailer's controlling terminal, allowing an attacker to escape the sandbox if the thumbnailer has a controlling terminal. This is due to improper filtering of the TIOCSTI ioctl on 64-bit systems, similar to CVE-2019-10063.	nautilus	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-8408
1266	CVE-2019-11460	Medium	CRITICAL	An issue was discovered in GNOME gnome-desktop 3.26, 3.28, and 3.30 prior to 3.30.2.2, and 3.32 prior to 3.32.1.1. A compromised thumbnailer may escape the bubblewrap sandbox used to confine thumbnailers by using the TIOCSTI ioctl to push characters into the input buffer of the thumbnailer's controlling terminal, allowing an attacker to escape the sandbox if the thumbnailer has a controlling terminal. This is due to improper filtering of the TIOCSTI ioctl on 64-bit systems, similar to CVE-2019-10063.	gnome-desktop	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-4022
1267	CVE-2019-11459	Medium	MEDIUM	The tiff_document_render() and tiff_document_get_thumbnail() functions in the TIFF document backend in GNOME Evince through 3.32.0 did not handle errors from TIFFReadRGBAImageOriented(), leading to uninitialized memory use when processing certain TIFF image files.	evince	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4024
1268	CVE-2019-11455	Medium	HIGH	A buffer over-read in Util_urlDecode in util.c in Tildeslash Monit before 5.25.3 allows a remote authenticated attacker to retrieve the contents of adjacent memory via manipulation of GET or POST parameters. The attacker can also cause a denial of service (application outage).	monit	Unchanged	Won't Fix	Won't Fix	10.17.41.17	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-4028
1269	CVE-2019-11454	Medium	MEDIUM	Persistent cross-site scripting (XSS) in http/cervlet.c in Tildeslash Monit before 5.25.3 allows a remote unauthenticated attacker to introduce arbitrary JavaScript via manipulation of an unsanitized user field of the Authorization header for HTTP Basic Authentication, which is mishandled during an _viewlog operation.	monit	Unchanged	Won't Fix	Won't Fix	10.17.41.17	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3965
1270	CVE-2019-11393	Medium	CRITICAL	An issue was discovered in /admin/users/update in M/Monit before 3.7.3. It allows unprivileged users to escalate their privileges to an administrator by requesting a password change and specifying the admin parameter.	monit	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3966
1271	CVE-2019-11366	Medium	MEDIUM	An issue was discovered in atftpd in atftp 0.7.1. It does not lock the thread_list_mutex mutex before assigning the current thread data structure. As a result, the daemon is vulnerable to a denial of service attack due to a NULL pointer dereference. If thread_data is NULL when assigned to current, and modified by another thread before a certain tftpd_list.c check, there is a crash when dereferencing current->next.	atftp	Unchanged	8.0.0.31	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3970
1272	CVE-2019-11365	High	CRITICAL	An issue was discovered in atftpd in atftp 0.7.1. A remote attacker may send a crafted packet triggering a stack-based buffer overflow due to an insecurely implemented strncpy call. The vulnerability is triggered by sending an error packet of 3 bytes or fewer. There are multiple instances of this vulnerable strncpy pattern within the code base, specifically within tftpd_file.c, tftp_file.c, tftpd_mtftp.c, and tftp_mtftp.c.	atftp	Unchanged	8.0.0.31	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3971
1273	CVE-2019-11360	Medium	MEDIUM	A buffer overflow in iptables-restore in netfilter iptables 1.8.2 allows an attacker to (at least) crash the program or potentially gain code execution via a specially crafted iptables-save file. This is related to add_param_to_argv in xshared.c.	iptables	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.10	Not vulnerable	Not vulnerable	LIN1018-4443

	A	B	C	D	E	F	G	H	I	J	K	L	M
1274	CVE-2019-11339	Medium	HIGH	The studio profile decoder in libavcodec/mpeg4videodec.c in FFmpeg 4.0 before 4.0.4 and 4.1 before 4.1.2 allows remote attackers to cause a denial of service (out-of-array access) or possibly have unspecified other impact via crafted MPEG-4 video data.	ffmpeg	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-3915
1275	CVE-2019-11338	Medium	HIGH	libavcodec/hevcdec.c in FFmpeg 4.1.2 mishandles detection of duplicate first slices, which allows remote attackers to cause a denial of service (NULL pointer dereference and out-of-array access) or possibly have unspecified other impact via crafted HEVC data.	ffmpeg	Unchanged	Won't Fix	9.0.0.21	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-3916
1276	CVE-2019-11328	High	HIGH	An issue was discovered in Singularity 3.1.0 to 3.2.0-rc2, a malicious user with local/network access to the host system (e.g. ssh) could exploit this vulnerability due to insecure permissions allowing a user to edit files within `/run/singularity/instances/sing/<user>/<instance>`. The manipulation of those files can change the behavior of the starter-suid program when instances are joined resulting in potential privilege escalation on the host.	singularity	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4154
1277	CVE-2019-11324	Medium	HIGH	The urllib3 library before 1.24.2 for Python mishandles certain cases where the desired set of CA certificates is different from the OS store of CA certificates, which results in SSL connections succeeding in situations where a verification failure is the correct outcome. This is related to use of the ssl_context, ca_certs, or ca_certs_dir argument.	python-urllib3	Unchanged	Won't Fix	Won't Fix	Vulnerable	10.18.44.7	Not vulnerable	Not vulnerable	LIN1018-3972
1278	CVE-2019-11255	MEDIUM	MEDIUM	Improper input validation in Kubernetes CSI sidecar containers for external-provisioner (<v0.4.3, <v1.0.2, v1.1, <v1.2.2, <v1.3.1), external-snapshotter (<v0.4.2, <v1.0.2, v1.1, <1.2.2), and external-resizer (v0.1, v0.2) could result in unauthorized PersistentVolume data access or volume mutation during snapshot, restore from snapshot, cloning and resizing operations.	kubernetes	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Investigate	Investigate	LIN1019-3725
1279	CVE-2019-11254	MEDIUM	MEDIUM	The Kubernetes API Server component in versions 1.1-1.14, and versions prior to 1.15.10, 1.16.7 and 1.17.3 allows an authorized user who sends malicious YAML payloads to cause the kube-apiserver to consume excessive CPU cycles while parsing YAML.	kubernetes	Updated	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Investigate	Investigate	LIN1019-4220
1280	CVE-2019-11251	MEDIUM	MEDIUM	The Kubernetes kubectl cp command in versions 1.1-1.12, and versions prior to 1.13.11, 1.14.7, and 1.15.4 allows a combination of two symlinks provided by tar output of a malicious container to place a file outside of the destination directory specified in the kubectl cp invocation. This could be used to allow an attacker to place a nefarious file using a symlink, outside of the destination tree.	kubernetes	Updated	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	10.19.45.5	10.20.15.0	LIN1019-4047
1281	CVE-2019-11250	LOW	MEDIUM	The Kubernetes client-go library logs request headers at verbosity levels of 7 or higher. This can disclose credentials to unauthorized users via logs or command output. Kubernetes components (such as kube-apiserver) prior to v1.16.0, which make use of basic or bearer token authentication, and run at high verbosity levels, are affected.	kubernetes	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	10.19.45.1	Not vulnerable	LIN1018-4800
1282	CVE-2019-1125	Low	MEDIUM	An information disclosure vulnerability exists when certain central processing units (CPU) speculatively access memory, aka 'Windows Kernel Information Disclosure Vulnerability'. This CVE ID is unique from CVE-2019-1071, CVE-2019-1073.	linux	Unchanged	8.0.0.31	9.0.0.25	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4938
1283	CVE-2019-11249	MEDIUM	MEDIUM	The kubectl cp command allows copying files between containers and the user machine. To copy files from a container, Kubernetes runs tar inside the container to create a tar archive, copies it over the network, and kubectl unpacks it on the user?s machine. If the tar binary in the container is malicious, it could run any code and output unexpected, malicious results. An attacker could use this to write files to any path on the user?s machine when kubectl cp is called, limited only by the system permissions of the local user. Kubernetes affected versions include versions prior to 1.13.9, versions prior to 1.14.5, versions prior to 1.15.2, and versions 1.1, 1.2, 1.4, 1.4, 1.5, 1.6, 1.7, 1.8, 1.9, 1.10, 1.11, 1.12.	kubernetes	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-4801
1284	CVE-2019-11247	MEDIUM	HIGH	The Kubernetes kube-apiserver mistakenly allows access to a cluster-scoped custom resource if the request is made as if the resource were namespaced. Authorizations for the resource accessed in this manner are enforced using roles and role bindings within the namespace, meaning that a user with access only to a resource in one namespace could create, view update or delete the cluster-scoped resource (according to their namespace role privileges). Kubernetes affected versions include versions prior to 1.13.9, versions prior to 1.14.5, versions prior to 1.15.2, and versions 1.7, 1.8, 1.9, 1.10, 1.11, 1.12.	kubernetes	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-4803
1285	CVE-2019-11246	MEDIUM	MEDIUM	The kubectl cp command allows copying files between containers and the user machine. To copy files from a container, Kubernetes runs tar inside the container to create a tar archive, copies it over the network, and kubectl unpacks it on the user?s machine. If the tar binary in the container is malicious, it could run any code and output unexpected, malicious results. An attacker could use this to write files to any path on the user?s machine when kubectl cp is called, limited only by the system permissions of the local user. Kubernetes affected versions include versions prior to 1.12.9, versions prior to 1.13.6, versions prior to 1.14.2, and versions 1.1, 1.2, 1.4, 1.4, 1.5, 1.6, 1.7, 1.8, 1.9, 1.10, 1.11.	kubernetes	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-4804

1330	CVE-2019-10714	Medium	MEDIUM	LocaleLowercase in MagickCore/locale.c in ImageMagick before 7.0.8-32 allows out-of-bounds access, leading to a SIGSEGV.	imagemagick	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3839
1331	CVE-2019-10691	Medium	HIGH	The JSON encoder in Dovecot before 2.3.5.2 allows attackers to repeatedly crash the authentication service by attempting to authenticate with an invalid UTF-8 sequence as the username.	dovecot	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4025
1332	CVE-2019-10654	Medium	MEDIUM	The lzo1x_decompress function in liblzo2.so.2 in LZO 2.10, as used in Long Range Zip (aka lrzip) 0.631, allows remote attackers to cause a denial of service (invalid memory read and application crash) via a crafted archive, a different vulnerability than CVE-2017-8845.	lzo	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Investigate	Investigate	LIN1018-3855
1333	CVE-2019-10650	Medium	HIGH	In ImageMagick 7.0.8-36 Q16, there is a heap-based buffer over-read in the function WriteTIFFImage of coders/tiff.c, which allows an attacker to cause a denial of service or information disclosure via a crafted image file.	imagemagick	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3840
1334	CVE-2019-10649	Medium	MEDIUM	In ImageMagick 7.0.8-36 Q16, there is a memory leak in the function SVGKeyValuePairs of coders/svg.c, which allows an attacker to cause a denial of service via a crafted image file.	imagemagick	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3841
1335	CVE-2019-10639	MEDIUM	HIGH	The Linux kernel 4.x (starting from 4.1) and 5.x before 5.0.8 allows Information Exposure (partial kernel address disclosure), leading to a KASLR bypass. Specifically, it is possible to extract the KASLR kernel image offset using the IP ID values the kernel produces for connection-less protocols (e.g., UDP and ICMP). When such traffic is sent to multiple destination IP addresses, it is possible to obtain hash collisions (of indices to the counter array) and thereby obtain the hashing key (via enumeration). This key contains enough bits from a kernel address (of a static variable) so when the key is extracted (via enumeration), the offset of the kernel image is exposed. This attack can be carried out remotely, by the attacker forcing the target device to send UDP or ICMP (or certain other) traffic to attacker-controlled IP addresses. Forcing a server to send UDP traffic is trivial if the server is a DNS server. ICMP traffic is trivial if the server answers ICMP Echo requests (ping). For client targets, if the target visits the attacker's web page, then WebRTC or gQUIC can be used to force UDP traffic to attacker-controlled IP addresses. NOTE: this attack against KASLR became viable in 4.1 because IP ID generation was changed to have a dependency on an address associated with a network namespace.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4411
1336	CVE-2019-10638	Medium	MEDIUM	In the Linux kernel before 5.1.7, a device can be tracked by an attacker using the IP ID values the kernel produces for connection-less protocols (e.g., UDP and ICMP). When such traffic is sent to multiple destination IP addresses, it is possible to obtain hash collisions (of indices to the counter array) and thereby obtain the hashing key (via enumeration). An attack may be conducted by hosting a crafted web page that uses WebRTC or gQUIC to force UDP traffic to attacker-controlled IP addresses.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.9	Not vulnerable	Not vulnerable	LIN1018-4412
1337	CVE-2019-10222	MEDIUM	HIGH	A flaw was found in the Ceph RGW configuration with Beast as the front end handling client requests. An unauthenticated attacker could crash the Ceph RGW server by sending valid HTTP headers and terminating the connection, resulting in a remote denial of service for Ceph RGW clients.	ceph	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Vulnerable	LIN1019-3469
1338	CVE-2019-10220	HIGH	HIGH	Linux kernel CIFS implementation, version 4.9.0 is vulnerable to a relative paths injection in directory entry lists.	linux	Unchanged	Vulnerable	9.0.0.25	10.17.41.20	10.18.44.14	10.19.45.2	10.20.3.0	LIN1019-3666
1339	CVE-2019-10218	MEDIUM	MEDIUM	A flaw was found in the samba client, all samba versions before samba 4.11.2, 4.10.10 and 4.9.15, where a malicious server can supply a pathname to the client with separators. This could allow the client to access files and folders outside of the SMB network pathnames. An attacker could use this vulnerability to create files outside of the current working directory using the privileges of the client user.	samba	Unchanged	Investigate	Investigate	10.17.41.19	10.18.44.12	10.19.45.2	Not vulnerable	LIN1019-3297

An unauthenticated attacker could use this flaw to escape the shared directory and access the contents of directories outside the share.	samba	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4834
1344	CVE-2019-10193	MEDIUM	HIGH	A stack-buffer overflow vulnerability was found in the Redis hyperloglog data structure versions 3.x before 3.2.13, 4.x before 4.0.14 and 5.x before 5.0.4. By corrupting a hyperloglog using the SETRANGE command, an attacker could cause Redis to perform controlled increments of up to 12 bytes past the end of a stack-allocated buffer.	redis	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4440
1345	CVE-2019-10192	MEDIUM	HIGH	A heap-buffer overflow vulnerability was found in the Redis hyperloglog data structure versions 3.x before 3.2.13, 4.x before 4.0.14 and 5.x before 5.0.4. By carefully corrupting a hyperloglog using the SETRANGE command, an attacker could trick Redis interpretation of dense HLL encoding to write up to 3 bytes beyond the end of a heap-allocated buffer.	redis	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4444
1346	CVE-2019-10168	Medium	HIGH	The virConnectBaselineHypervisorCPU() and virConnectCompareHypervisorCPU() libvirt APIs, 4.x.x before 4.10.1 and 5.x.x before 5.4.1, accept an emulator argument to specify the program providing emulation for a domain. Since v1.2.19, libvirt will execute that program to probe the domain's capabilities. Read-only clients could specify an arbitrary path for this argument, causing libvirtd to execute a crafted executable with its own privileges.	libvirt	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.10	Not vulnerable	Not vulnerable	LIN1018-4615
1347	CVE-2019-10167	Medium	HIGH	The virConnectGetDomainCapabilities() libvirt API, versions 4.x.x before 4.10.1 and 5.x.x before 5.4.1, accepts an emulatorbin argument to specify the program providing emulation for a domain. Since v1.2.19, libvirt will execute that program to probe the domain's capabilities. Read-only clients could specify an arbitrary path for this argument, causing libvirtd to execute a crafted executable with its own privileges.	libvirt	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.10	Not vulnerable	Not vulnerable	LIN1018-4614
1348	CVE-2019-10164	High	HIGH	PostgreSQL versions 10.x before 10.9 and versions 11.x before 11.4 are vulnerable to a stack-based buffer overflow. Any authenticated user can overflow a stack-based buffer by changing the user's own password to a purpose-crafted value. This often suffices to execute arbitrary code as the PostgreSQL operating system account.	postgresql	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.9	Not vulnerable	Not vulnerable	LIN1018-4363
1349	CVE-2019-10161	High	HIGH	It was discovered that libvirtd before versions 4.10.1 and 5.4.1 would permit read-only clients to use the virDomainSaveImageGetXMLDesc() API, specifying an arbitrary path which would be accessed with the permissions of the libvirtd process. An attacker with access to the libvirtd socket could use this to probe the existence of arbitrary files, cause denial of service or cause libvirtd to execute arbitrary programs.	libvirt	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.10	Not vulnerable	Not vulnerable	LIN1018-4591
1350	CVE-2019-10160	Medium	CRITICAL	A security regression of CVE-2019-9636 was discovered in python since commit d537ab0ff9767ef024f26246899728f0116b1ec3 affecting versions 2.7, 3.5, 3.6, 3.7 and from v3.8.0a4 through v3.8.0b1, which still allows an attacker to exploit CVE-2019-9636 by abusing the user and password parts of a URL. When an application parses user-supplied URLs to store cookies, authentication credentials, or other kind of information, it is possible for an attacker to provide specially crafted URLs to make the application locate host-related information (e.g. cookies, authentication data) and send them to a different host than where it should, unlike if the URLs had been correctly parsed. The result of an attack may vary based on the application.	python	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.9	10.19.45.1	Not vulnerable	LIN1018-4247
1351	CVE-2019-10143	Medium	HIGH	It was discovered freeradius up to and including version 3.0.19 does not correctly configure logrotate, allowing a local attacker who already has control of the radiusd user to escalate his privileges to root, by tricking logrotate into writing a radiusd-writable file to a directory normally inaccessible by the radiusd user.	freeradius	Unchanged	8.0.0.31	Investigate	10.17.41.17	10.18.44.8	10.19.45.1	Not vulnerable	LIN1018-4159
1352	CVE-2019-10142	MEDIUM	HIGH	A flaw was found in the Linux kernel's freescale hypervisor manager implementation, kernel versions 5.0.x up to, excluding 5.0.17. A parameter passed to an ioctl was incorrectly validated and used in size calculations for the page size calculation. An attacker can use this flaw to crash the system, corrupt memory, or create other adverse security affects.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.18	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4568
1353	CVE-2019-10132	Medium	HIGH	A vulnerability was found in libvirt >= 4.1.0 in the virtlockd-admin.socket and virtlogd-admin.socket systemd units. A missing SocketMode configuration parameter allows any user on the host to connect using virtlockd-admin-sock or virtlogd-admin-sock and perform administrative tasks against the virtlockd and virtlogd daemons.	libvirt	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4140

	A	B	C	D	E	F	G	H	I	J	K	L	M
1354	CVE-2019-10131	Low	HIGH	An off-by-one read vulnerability was discovered in ImageMagick before version 7.0.7-28 in the formatIPTCfromBuffer function in coders/meta.c. A local attacker may use this flaw to read beyond the end of the buffer or to crash the program.	imagemagick	Unchanged	8.0.0.31	9.0.0.21	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-4016
1355	CVE-2019-10130	MEDIUM	MEDIUM	A vulnerability was found in PostgreSQL versions 11.x up to excluding 11.3, 10.x up to excluding 10.8, 9.6.x up to, excluding 9.6.13, 9.5.x up to, excluding 9.5.17. PostgreSQL maintains column statistics for tables. Certain statistics, such as histograms and lists of most common values, contain values taken from the column. PostgreSQL does not evaluate row security policies before consulting those statistics during query planning; an attacker can exploit this to read the most common values of certain columns. Affected columns are those for which the attacker has SELECT privilege and for which, in an ordinary query, row-level security prunes the set of rows visible to the attacker.	postgresql	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.12	Not vulnerable	Not vulnerable	LIN1018-4570
1356	CVE-2019-10129	MEDIUM	MEDIUM	A vulnerability was found in postgresql versions 11.x prior to 11.3. Using a purpose-crafted insert to a partitioned table, an attacker can read arbitrary bytes of server memory. In the default configuration, any user can create a partitioned table suitable for this attack. (Exploit prerequisites are the same as for CVE-2018-1052).	postgresql	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4571
1357	CVE-2019-10126	High	CRITICAL	A flaw was found in the Linux kernel. A heap based buffer overflow in mwifiex_uap_parse_tail_ies function in drivers/net/wireless/marvell/mwifiex/ie.c might lead to memory corruption and possibly other consequences.	linux	Unchanged	Not vulnerable	9.0.0.22	10.17.41.17	10.18.44.9	10.19.45.1	Not vulnerable	LIN1018-4287
1358	CVE-2019-10125	High	CRITICAL	An issue was discovered in aio_poll() in fs/aio.c in the Linux kernel through 5.0.4. A file may be released by aio_poll_wake() if an expected event is triggered immediately (e.g., by the close of a pair of pipes) after the return of vfs_poll(), and this will cause a use-after-free.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3804
1359	CVE-2019-10124	High	HIGH	An issue was discovered in the hwpoison implementation in mm/memory-failure.c in the Linux kernel before 5.0.4. When soft_offline_in_use_page() runs on a thp tail page after pmd is split, an attacker can cause a denial of service (BUG).	linux	Unchanged	Not vulnerable	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3805

1383	CVE-2019-10061	HIGH	CRITICAL	utils/find-opencv.js in node-opencv (aka OpenCV bindings for Node.js) prior to 6.1.0 is vulnerable to Command Injection. It does not validate user input allowing attackers to execute arbitrary commands.	opencv	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3797
1384	CVE-2019-10056	MEDIUM	HIGH	An issue was discovered in Suricata 4.1.3. The code mishandles the case of sending a network packet with the right type, such that the function DecodeEthernet in decode-ethernet.c is executed a second time. At this point, the algorithm cuts the first part of the packet and doesn't determine the current length. Specifically, if the packet is exactly 28 long, in the first iteration it subtracts 14 bytes. Then, it is working with a packet length of 14. At this point, the case distinction says it is a valid packet. After that it casts the packet, but this packet has no type, and the program crashes at the type case distinction.	suricata	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4779
1385	CVE-2019-10055	HIGH	HIGH	An issue was discovered in Suricata 4.1.3. The function ftp_pasv_response lacks a check for the length of part1 and part2, leading to a crash within the ftp/mod.rs file.	suricata	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4780
1386	CVE-2019-10054	MEDIUM	HIGH	An issue was discovered in Suricata 4.1.3. The function process_reply_record_v3 lacks a check for the length of reply.data. It causes an invalid memory access and the program crashes within the nfs/nfs3.rs file.	suricata	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4781
1387	CVE-2019-10053	High	CRITICAL	An issue was discovered in Suricata 4.1.x before 4.1.4. If the input of the function SSHParseBanner is composed only of a \ n character, then the program runs into a heap-based buffer over-read. This occurs because the erroneous search for \r results in an integer underflow.	suricata	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4071
1388	CVE-2019-10051	MEDIUM	HIGH	An issue was discovered in Suricata 4.1.3. If the function filetracker_newchunk encounters an unsafe Some(sfcm) => { ft.new_chunk } item, then the program enters an smb/files.rs error condition and crashes.	suricata	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4783
1389	CVE-2019-10050	Medium	HIGH	A buffer over-read issue was discovered in Suricata 4.1.x before 4.1.4. If the input of the decode-mpls.c function DecodeMPLS is composed only of a packet of source address and destination address plus the correct type field and the right number for shim, an attacker can manipulate the control flow, such that the condition to leave the loop is true. After leaving the loop, the network packet has a length of 2 bytes. There is no validation of this length. Later on, the code tries to read at an empty position, leading to a crash.	suricata	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4072
1390	CVE-2019-1002101	Medium	MEDIUM	The kubectl cp command allows copying files between containers and the user machine. To copy files from a container, Kubernetes creates a tar inside the container, copies it over the network, and kubectl unpacks it on the user?s machine. If the tar binary in the container is malicious, it could run any code and output unexpected, malicious results. An attacker could use this to write files to any path on the user?s machine when kubectl cp is called, limited only by the system permissions of the local user. The untar function can both create and follow symbolic links. The issue is resolved in kubectl v1.11.9, v1.12.7, v1.13.5, and v1.14.0.	kubernetes	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3834
1391	CVE-2019-1002100	Medium	MEDIUM	In all Kubernetes versions prior to v1.11.8, v1.12.6, and v1.13.4, users that are authorized to make patch requests to the Kubernetes API Server can send a specially crafted patch of type json-patch (e.g. `kubectl patch --type json` or `Content-Type: application/json-patch+json`) that consumes excessive resources while processing, causing a Denial of Service on the API Server.	kubernetes	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3835
1392	CVE-2019-1000020	Medium	MEDIUM	libarchive version commit 5a98dcf8a86364b3c2c469c85b93647dfb139961 onwards (version v2.8.0 onwards) contains a CWE-835: Loop with Unreachable Exit Condition ('Infinite Loop') vulnerability in ISO9660 parser, archive_read_support_format_iso9660.c, read_CE()/parse_rockridge() that can result in DoS by infinite loop. This attack appears to be exploitable via the victim opening a specially crafted ISO9660 file.	libarchive	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3560

1440	CVE-2018-9264	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.5 and 2.2.0 to 2.2.13, the ADB dissector could crash with a heap-based buffer overflow. This was addressed in epan/dissectors/packet-adb.c by checking for a length inconsistency.	wireshark	Unchanged	Not vulnerable	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3728

	A	B	C	D	E	F	G	H	I	J	K	L	M
1441	CVE-2018-9263	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.5 and 2.2.0 to 2.2.13, the Kerberos dissector could crash. This was addressed in epan/dissectors/packet-kerberos.c by ensuring a nonzero key length.	wireshark	Unchanged	8.0.0.26	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3756
1442	CVE-2018-9262	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.5 and 2.2.0 to 2.2.13, the VLAN dissector could crash. This was addressed in epan/dissectors/packet-vlan.c by limiting VLAN tag nesting to restrict the recursion depth.	wireshark	Unchanged	8.0.0.26	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3737
1443	CVE-2018-9261	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.5 and 2.2.0 to 2.2.13, the NBAP dissector could crash with a large loop that ends with a heap-based buffer overflow. This was addressed in epan/dissectors/packet-nbap.c by prohibiting the self-linking of DCH-IDs.	wireshark	Unchanged	8.0.0.26	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3750
1444	CVE-2018-9260	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.5 and 2.2.0 to 2.2.13, the IEEE 802.15.4 dissector could crash. This was addressed in epan/dissectors/packet-ieee802154.c by ensuring that an allocation step occurs.	wireshark	Unchanged	8.0.0.26	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3758
1445	CVE-2018-9259	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.5 and 2.2.0 to 2.2.13, the MP4 dissector could crash. This was addressed in epan/dissectors/file-mp4.c by restricting the box recursion depth.	wireshark	Unchanged	8.0.0.26	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3722
1446	CVE-2018-9258	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.5, the TCP dissector could crash. This was addressed in epan/dissectors/packet-tcp.c by preserving valid data sources.	wireshark	Unchanged	8.0.0.26	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3755
1447	CVE-2018-9257	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.5, the CQL dissector could go into an infinite loop. This was addressed in epan/dissectors/packet-cql.c by checking for a nonzero number of columns.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3733
1448	CVE-2018-9256	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.5 and 2.2.0 to 2.2.13, the LWAPP dissector could crash. This was addressed in epan/dissectors/packet-lwapp.c by limiting the encapsulation levels to restrict the recursion depth.	wireshark	Unchanged	8.0.0.26	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3726
1449	CVE-2018-9252	MEDIUM	MEDIUM	JasPer 2.0.14 allows denial of service via a reachable assertion in the function jpc_abstorelstepsize in libjasper/jpc/jpc_enc.c.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3753
1450	CVE-2018-9251	LOW	MEDIUM	The xz_decomp function in xzlib.c in libxml2 2.9.8, if --with-lzma is used, allows remote attackers to cause a denial of service (infinite loop) via a crafted XML file that triggers LZMA_MEMLIMIT_ERROR, as demonstrated by xmllint, a different vulnerability than CVE-2015-8035.	libxml2	Unchanged	8.0.0.27	9.0.0.18	10.17.41.10	10.18.44.1	10.19.45.1	Not vulnerable	LIN10-3736
1451	CVE-2018-9234	MEDIUM	HIGH	GnuPG 2.2.4 and 2.2.5 does not enforce a configuration in which key certification requires an offline master Certify key, which results in apparently valid certifications that occurred only with access to a signing subkey.	gnupg	Unchanged	Not vulnerable	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3725
1452	CVE-2018-9154	MEDIUM	HIGH	There is a reachable abort in the function jpc_dec_process_sot in libjasper/jpc/jpc_dec.c of JasPer 2.0.14 that will lead to a remote denial of service attack by triggering an unexpected jas_alloc2 return value, a different vulnerability than CVE-2017-13745.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3937
1453	CVE-2018-9138	MEDIUM	MEDIUM	An issue was discovered in cplus-dem.c in GNU libiberty, as distributed in GNU Binutils 2.29 and 2.30. Stack Exhaustion occurs in the the C++ demangling functions provided by libiberty, and there are recursive stack frames: demangle_nested_args, demangle_args, do_arg, and do_type.	binutils	Unchanged	8.0.0.27	Vulnerable	Vulnerable	Not vulnerable	10.19.45.1	Not vulnerable	LIN10-3653
1454	CVE-2018-9135	MEDIUM	HIGH	In ImageMagick 7.0.7-24 Q16, there is a heap-based buffer over-read in IsWEBPImageLossless in coders/webp.c.	imagemagick	Unchanged	8.0.0.26	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3630
1455	CVE-2018-9133	MEDIUM	MEDIUM	ImageMagick 7.0.7-26 Q16 has excessive iteration in the DecodeLabImage and EncodeLabImage functions (coders/tiff.c), which results in a hang (tens of minutes) with a tiny PoC file. Remote attackers could leverage this vulnerability to cause a denial of service via a crafted tiff file.	imagemagick	Unchanged	8.0.0.26	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3645
1456	CVE-2018-9055	Medium	MEDIUM	JasPer 2.0.14 allows denial of service via a reachable assertion in the function jpc_firstone in libjasper/jpc/jpc_math.c.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3636
1457	CVE-2018-8960	MEDIUM	HIGH	The ReadTIFFImage function in coders/tiff.c in ImageMagick 7.0.7-26 Q16 does not properly restrict memory allocation, leading to a heap-based buffer over-read.	imagemagick	Unchanged	8.0.0.26	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3632
1458	CVE-2018-8945	MEDIUM	MEDIUM	The bfd_section_from_shdr function in elf.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.30, allows remote attackers to cause a denial of service (segmentation fault) via a large attribute section.	binutils	Unchanged	8.0.0.27	9.0.0.20	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3637
1459	CVE-2018-8905	MEDIUM	HIGH	In LibTIFF 4.0.9, a heap-based buffer overflow occurs in the function LZWDecodeCompat in tif_lzw.c via a crafted TIFF file, as demonstrated by tiff2ps.	libtiff	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3631
1460	CVE-2018-8897	HIGH	HIGH	A statement in the System Programming Guide of the Intel 64 and IA-32 Architectures Software Developer's Manual (SDM) was mishandled in the development of some or all operating-system kernels, resulting in unexpected behavior for #DB exceptions that are deferred by MOV SS or POP SS, as demonstrated by (for example) privilege escalation in Windows, macOS, some Xen configurations, or FreeBSD, or a Linux kernel crash. The MOV to SS and POP SS instructions inhibit interrupts (including NMIs), data breakpoints, and single step trap exceptions until the instruction boundary following the next instruction (SDM Vol. 3A; section 6.8.3). (The inhibited data breakpoints are those on memory accessed by the MOV to SS or POP to SS instruction itself.) Note that debug exceptions are not inhibited by the interrupt enable (EFLAGS.IF) system flag (SDM Vol. 3A; section 2.3). If the instruction following the MOV to SS or POP to SS instruction is an instruction like SYSCALL, SYSENTER, INT 3, etc. that transfers control to the operating system at CPL < 3, the debug exception is delivered after the transfer to CPL < 3 is complete. OS kernels may not expect this order of events and may therefore experience unexpected behavior when it occurs.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3888

	A	B	C	D	E	F	G	H	I	J	K	L	M
1461	CVE-2018-8883	MEDIUM	HIGH	Netwide Assembler (NASM) 2.13.02rc2 has a buffer over-read in the parse_line function in asm/parser.c via uncontrolled access to nasm_reg_flags.	nasm	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3656

1484	CVE-2018-8098	MEDIUM	MEDIUM	Integer overflow in the index.c:read_entry() function while decompressing a compressed prefix length in libgit2 before v0.26.2 allows an attacker to cause a denial of service (out-of-bounds read) via a crafted repository index file.	libgit2	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3509
1485	CVE-2018-8087	MEDIUM	MEDIUM	Memory leak in the hwsim_new_radio_nl function in drivers/net/wireless/mac80211_hwsim.c in the Linux kernel through 4.15.9 allows local users to cause a denial of service (memory consumption) by triggering an out-of-array error case.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3581
1486	CVE-2018-8086			The basename implementation in string/basename.c in the GNU C Library (aka glibc or libc6) 2.26 allows attackers to cause a denial of service (segmentation fault), within the assembly code for strrchr, via a crafted argument.	glibc	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3582
1487	CVE-2018-8050	MEDIUM	MEDIUM	The af_get_page() function in lib/afflib_pages.cpp in AFFLIB (aka AFFLIBv3) through 3.7.16 allows remote attackers to cause a denial of service (segmentation fault) via a corrupt AFF image that triggers an unexpected pagesize value.	afflib	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3514
1488	CVE-2018-8043	LOW	MEDIUM	The unimac_mdio_probe function in drivers/net/phy/mdio-bcm-unimac.c in the Linux kernel through 4.15.8 does not validate certain resource availability, which allows local users to cause a denial of service (NULL pointer dereference).	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3546
1489	CVE-2018-8011	MEDIUM	HIGH	By specially crafting HTTP requests, the mod_md challenge handler would dereference a NULL pointer and cause the child process to segfault. This could be used to DoS the server. Fixed in Apache HTTP Server 2.4.34 (Affected 2.4.33).	apache	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4367
1490	CVE-2018-7995	MEDIUM	MEDIUM	Race condition in the store_int_with_restart() function in arch/x86/kernel/cpu/mcheck/mce.c in the Linux kernel through 4.15.7 allows local users to cause a denial of service (panic) by leveraging root access to write to the check_interval file in a /sys/devices/system/machinecheck/machinecheck<cpu number> directory.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3556
1491	CVE-2018-7858	LOW	MEDIUM	Quick Emulator (aka QEMU), when built with the Cirrus CLGD 54xx VGA Emulator support, allows local guest OS privileged users to cause a denial of service (out-of-bounds access and QEMU process crash) by leveraging incorrect region calculation when updating VGA display.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3564
1492	CVE-2018-7757	LOW	MEDIUM	Memory leak in the sas_smp_get_phy_events function in drivers/scsi/libsas/sas_expander.c in the Linux kernel through 4.15.7 allows local users to cause a denial of service (memory consumption) via many read accesses to files in the /sys/class/sas_phy directory, as demonstrated by the /sys/class/sas_phy/phy-1:0:12/invalid_dword_count file.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3571
1493	CVE-2018-7755	LOW	MEDIUM	An issue was discovered in the fd_locked_ioctl function in drivers/block/floppy.c in the Linux kernel through 4.15.7. The floppy driver will copy a kernel pointer to user memory in response to the FDGETPRM ioctl. An attacker can send the FDGETPRM ioctl and use the obtained kernel pointer to discover the location of kernel code and data and bypass kernel security protections such as KASLR.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3568
1494	CVE-2018-7754	LOW	MEDIUM	The aoedisk_debugfs_show function in drivers/block/aoe/aoeblk.c in the Linux kernel through 4.16.4rc4 allows local users to obtain sensitive address information by reading ffree: lines in a debugfs file.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4539
1495	CVE-2018-7751	MEDIUM	MEDIUM	The svg_probe function in libavformat/img2dec.c in FFmpeg through 3.4.2 allows remote attackers to cause a denial of service (Infinite Loop) via a crafted XML file.	ffmpeg	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3868
1496	CVE-2018-7740	MEDIUM	MEDIUM	The resv_map_release function in mm/hugetlb.c in the Linux kernel through 4.15.7 allows local users to cause a denial of service (BUG) via a crafted application that makes mmap system calls and has a large pgoff argument to the remap_file_pages system call.	linux	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3558
1497	CVE-2018-7738	HIGH	HIGH	In util-linux before 2.32-rc1, bash-completion/umount allows local users to gain privileges by embedding shell commands in a mountpoint name, which is mishandled during a umount command (within Bash) by a different user, as demonstrated by logging in as root and entering umount followed by a tab character for autocompletion.	until-linux	Unchanged	Not vulnerable	9.0.0.15	10.17.41.6	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3523
1498	CVE-2018-7714	MEDIUM	HIGH	The validateInputImageSize function in modules/imgcodecs/src/loadsave.cpp in OpenCV 3.4.1 allows remote attackers to cause a denial of service (assertion failure) because (pixels <= (1<<30)) may be false.	opencv	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3533
1499	CVE-2018-7713	MEDIUM	HIGH	The validateInputImageSize function in modules/imgcodecs/src/loadsave.cpp in OpenCV 3.4.1 allows remote attackers to cause a denial of service (assertion failure) because (size.width <= (1<<20)) may be false.	opencv	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3575
1500	CVE-2018-7712	MEDIUM	HIGH	The validateInputImageSize function in modules/imgcodecs/src/loadsave.cpp in OpenCV 3.4.1 allows remote attackers to cause a denial of service (assertion failure) because (size.height <= (1<<20)) may be false.	opencv	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3513
1501	CVE-2018-7648	HIGH	CRITICAL	An issue was discovered in mj2/opj_mj2_extract.c in OpenJPEG 2.3.0. The output prefix was not checked for length, which could overflow a buffer, when providing a prefix with 50 or more characters on the command line.	openjpeg	Unchanged	Won't Fix	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3565
1502	CVE-2018-7643	MEDIUM	HIGH	The display_debug_ranges function in dwarf.c in GNU Binutils 2.30 allows remote attackers to cause a denial of service (integer overflow and application crash) or possibly have unspecified other impact via a crafted ELF file, as demonstrated by objdump.	binutils	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3570

	A	B	C	D	E	F	G	H	I	J	K	L	M
1503	CVE-2018-7642	MEDIUM	MEDIUM	The swap_std_reloc_in function in aoutx.h in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.30, allows remote attackers to cause a denial of service (aout_32_swap_std_reloc_out NULL pointer dereference and application crash) via a crafted ELF file, as demonstrated by objcopy.	binutils	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3530
1504	CVE-2018-7584	HIGH	CRITICAL	In PHP through 5.6.33, 7.0.x before 7.0.28, 7.1.x through 7.1.14, and 7.2.x through 7.2.2, there is a stack-based buffer under-read while parsing an HTTP response in the php_stream_url_wrap_http_ex function in ext/standard/http_fopen_wrapper.c. This subsequently results in copying a large string.	php	Unchanged	8.0.0.26	9.0.0.15	10.17.41.6	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3553
1505	CVE-2018-7570	MEDIUM	MEDIUM	The assign_file_positions_for_non_load_sections function in elf.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.30, allows remote attackers to cause a denial of service (NULL pointer dereference and application crash) via an ELF file with a RELRO segment that lacks a matching LOAD segment, as demonstrated by objcopy.	binutils	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3548
1506	CVE-2018-7569	MEDIUM	MEDIUM	dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.30, allows remote attackers to cause a denial of service (integer underflow or overflow, and application crash) via an ELF file with a corrupt DWARF FORM block, as demonstrated by nm.	binutils	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3528
1507	CVE-2018-7568	MEDIUM	MEDIUM	The parse_die function in dwarf1.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.30, allows remote attackers to cause a denial of service (integer overflow and application crash) via an ELF file with corrupt dwarf1 debug information, as demonstrated by nm.	binutils	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3521
1508	CVE-2018-7566	MEDIUM	HIGH	The Linux kernel 4.15 has a Buffer Overflow via an SNDRV_SEQ_IOCTL_SET_CLIENT_POOL ioctl write operation to /dev/snd/seq by a local user.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3635
1509	CVE-2018-7557	MEDIUM	MEDIUM	The decode_init function in libavcodec/utvideodec.c in FFmpeg through 3.4.2 allows remote attackers to cause a denial of service (Out of array read) via an AVI file with crafted dimensions within chroma subsampling data.	ffmpeg	Unchanged	Won't Fix	9.0.0.15	10.17.41.6	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3544
1510	CVE-2018-7550	MEDIUM	HIGH	The load_multiboot function in hw/i386/multiboot.c in Quick Emulator (aka QEMU) allows local guest OS users to execute arbitrary code on the QEMU host via a mh_load_end_addr value greater than mh_bss_end_addr, which triggers an out-of-bounds read or write memory access.	qemu	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3550
1511	CVE-2018-7549	MEDIUM	HIGH	In params.c in zsh through 5.4.2, there is a crash during a copy of an empty hash table, as demonstrated by typeset -p.	zsh	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3543
1512	CVE-2018-7548	HIGH	CRITICAL	In subst.c in zsh through 5.4.2, there is a NULL pointer dereference when using ${(PA)...} on an empty array result.	zsh	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	LIN10-3508
1513	CVE-2018-7544	MEDIUM	CRITICAL	** DISPUTED ** A cross-protocol scripting issue was discovered in the management interface in OpenVPN through 2.4.5. When this interface is enabled over TCP without a password, and when no other clients are connected to this interface, attackers can execute arbitrary management commands, obtain sensitive information, or cause a denial of service (SIGTERM) by triggering XMLHttpRequest actions in a web browser. This is demonstrated by a multipart/form-data POST to http://localhost:23000 with a signal SIGTERM command in a TEXTAREA element. NOTE: The vendor disputes that this is a vulnerability. They state that this is the result of improper configuration of the OpenVPN instance rather than an intrinsic vulnerability, and now more explicitly warn against such configurations in both the management-interface documentation, and with a runtime warning.	openvpn	Unchanged	Investigate	Investigate	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN1019-3678
1514	CVE-2018-7492	MEDIUM	MEDIUM	A NULL pointer dereference was found in the net/rds/rdma.c __rds_rdma_map() function in the Linux kernel before 4.14.7 allowing local attackers to cause a system panic and a denial-of-service, related to RDS_GET_MR and RDS_GET_MR_FOR_DEST.	linux	Unchanged	8.0.0.26	9.0.0.15	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3388
1515	CVE-2018-7490	MEDIUM	HIGH	uWSGI before 2.0.17 mishandles a DOCUMENT_ROOT check during use of the --php-docroot option, allowing directory traversal.	uwsgi	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3393
1516	CVE-2018-7485	HIGH	CRITICAL	The SQLWriteFileDSN function in odbcinst/SQLWriteFileDSN.c in unixODBC 2.3.5 has strncpy arguments in the wrong order, which allows attackers to cause a denial of service or possibly have unspecified other impact.	unixodbc	Unchanged	Not vulnerable	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3316
1517	CVE-2018-7480	HIGH	HIGH	The blkcg_init_queue function in block/blk-cgroup.c in the Linux kernel before 4.11 allows local users to cause a denial of service (double free) or possibly have unspecified other impact by triggering a creation failure.	linux	Unchanged	Not vulnerable	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3401
1518	CVE-2018-7470	MEDIUM	MEDIUM	An issue was discovered in ImageMagick 7.0.7-22 Q16. The IsWEBPImageLossless function in coders/webp.c allows attackers to cause a denial of service (segmentation violation) via a crafted file.	imagemagick	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3337
1519	CVE-2018-7456	MEDIUM	MEDIUM	A NULL Pointer Dereference occurs in the function TIFFPrintDirectory in tif_print.c in LibTIFF 4.0.9 when using the tiffinfo tool to print crafted TIFF information, a different vulnerability than CVE-2017-18013. (This affects an earlier part of the TIFFPrintDirectory function that was not addressed by the CVE-2017-18013 patch.)	libtiff	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3332
1520	CVE-2018-7443	MEDIUM	MEDIUM	The ReadTIFFImage function in coders/tiff.c in ImageMagick 7.0.7-23 Q16 does not properly validate the amount of image data in a file, which allows remote attackers to cause a denial of service (memory allocation failure in the AcquireMagickMemory function in MagickCore/memory.c).	imagemagick	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3430

	A	B	C	D	E	F	G	H	I	J	K	L	M
1521	CVE-2018-7442	MEDIUM	CRITICAL	An issue was discovered in Leptonica through 1.75.3. The gplotMakeOutput function does not block '/' characters in the gplot rootname argument, potentially leading to path traversal and arbitrary file overwrite.	leptonica	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3416
1522	CVE-2018-7441	MEDIUM	HIGH	Leptonica through 1.75.3 uses hardcoded /tmp pathnames, which might allow local users to overwrite arbitrary files or have unspecified other impact by creating files in advance or winning a race condition, as demonstrated by /tmp/junk_split_image.ps in prog/splitimage2pdf.c.	leptonica	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3357
1523	CVE-2018-7440	HIGH	CRITICAL	An issue was discovered in Leptonica through 1.75.3. The gplotMakeOutput function allows command injection via a $ (command) approach in the gplot rootname argument. This issue exists because of an incomplete fix for CVE-2018-3836.	leptonica	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3404
1524	CVE-2018-7421	MEDIUM	HIGH	In Wireshark 2.2.0 to 2.2.12 and 2.4.0 to 2.4.4, the DMP dissector could go into an infinite loop. This was addressed in epan/dissectors/packet-dmp.c by correctly supporting a bounded number of Security Categories for a DMP Security Classification.	wireshark	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3377
1525	CVE-2018-7420	MEDIUM	HIGH	In Wireshark 2.2.0 to 2.2.12 and 2.4.0 to 2.4.4, the pcapng file parser could crash. This was addressed in wiretap/pcapng.c by adding a block-size check for sysdig event blocks.	wireshark	Unchanged	8.0.0.28	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3329
1526	CVE-2018-7419	MEDIUM	HIGH	In Wireshark 2.2.0 to 2.2.12 and 2.4.0 to 2.4.4, the NBAP dissector could crash. This was addressed in epan/dissectors/asn1/nbap/nbap.cnf by ensuring DCH ID initialization.	wireshark	Unchanged	Not vulnerable	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3367
1527	CVE-2018-7418	MEDIUM	HIGH	In Wireshark 2.2.0 to 2.2.12 and 2.4.0 to 2.4.4, the SIGCOMP dissector could crash. This was addressed in epan/dissectors/packet-sigcomp.c by correcting the extraction of the length value.	wireshark	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3319
1528	CVE-2018-7417	MEDIUM	HIGH	In Wireshark 2.2.0 to 2.2.12 and 2.4.0 to 2.4.4, the IPMI dissector could crash. This was addressed in epan/dissectors/packet-ipmi-picmg.c by adding support for crafted packets that lack an IPMI header.	wireshark	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3391
1529	CVE-2018-7409	HIGH	CRITICAL	In unixODBC before 2.3.5, there is a buffer overflow in the unicode_to_ansi_copy() function in DriverManager/__info.c.	unixodbc	Unchanged	Vulnerable	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3313
1530	CVE-2018-7337	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4, the DOCSIS protocol dissector could crash. This was addressed in plugins/docsis/packet-docsis.c by removing the recursive algorithm that had been used for concatenated PDUs.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3382
1531	CVE-2018-7336	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, the FCP protocol dissector could crash. This was addressed in epan/dissectors/packet-fcp.c by checking for a NULL pointer.	wireshark	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3429
1532	CVE-2018-7335	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, the IEEE 802.11 dissector could crash. This was addressed in epan/crypt/airpdcap.c by rejecting lengths that are too small.	wireshark	Unchanged	Not vulnerable	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3346
1533	CVE-2018-7334	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, the UMTS MAC dissector could crash. This was addressed in epan/dissectors/packet-umts_mac.c by rejecting a certain reserved value.	wireshark	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3342
1534	CVE-2018-7333	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, epan/dissectors/packet-rpcrdma.c had an infinite loop that was addressed by validating a chunk size.	wireshark	Unchanged	Not vulnerable	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3390
1535	CVE-2018-7332	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, epan/dissectors/packet-reload.c had an infinite loop that was addressed by validating a length.	wireshark	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3433
1536	CVE-2018-7331	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, epan/dissectors/packet-ber.c had an infinite loop that was addressed by validating a length.	wireshark	Unchanged	8.0.0.28	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3363
1537	CVE-2018-7330	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, epan/dissectors/packet-thread.c had an infinite loop that was addressed by using a correct integer data type.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3387
1538	CVE-2018-7329	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, epan/dissectors/packet-s7comm.c had an infinite loop that was addressed by correcting off-by-one errors.	wireshark	Unchanged	Not vulnerable	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3386
1539	CVE-2018-7328	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, epan/dissectors/packet-usb.c had an infinite loop that was addressed by rejecting short frame header lengths.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3371
1540	CVE-2018-7327	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, epan/dissectors/packet-openflow_v6.c had an infinite loop that was addressed by validating property lengths.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3340
1541	CVE-2018-7326	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, epan/dissectors/packet-lltd.c had an infinite loop that was addressed by using a correct integer data type.	wireshark	Unchanged	Not vulnerable	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3372
1542	CVE-2018-7325	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, epan/dissectors/packet-rpki-rtr.c had an infinite loop that was addressed by validating a length field.	wireshark	Unchanged	Not vulnerable	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3405
1543	CVE-2018-7324	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, epan/dissectors/packet-sccp.c had an infinite loop that was addressed by using a correct integer data type.	wireshark	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3380
1544	CVE-2018-7323	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, epan/dissectors/packet-wccp.c had a large loop that was addressed by ensuring that a calculated length was monotonically increasing.	wireshark	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3358
1545	CVE-2018-7322	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, epan/dissectors/packet-dcm.c had an infinite loop that was addressed by checking for integer wraparound.	wireshark	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3412
1546	CVE-2018-7321	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, epan/dissectors/packet-thrift.c had a large loop that was addressed by not proceeding with dissection after encountering an unexpected type.	wireshark	Unchanged	Not vulnerable	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3431
1547	CVE-2018-7320	MEDIUM	HIGH	In Wireshark 2.4.0 to 2.4.4 and 2.2.0 to 2.2.12, the SIGCOMP protocol dissector could crash. This was addressed in epan/dissectors/packet-sigcomp.c by validating operand offsets.	wireshark	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3400

	A	B	C	D	E	F	G	H	I	J	K	L	M
1548	CVE-2018-7273	MEDIUM	MEDIUM	In the Linux kernel through 4.15.4, the floppy driver reveals the addresses of kernel functions and global variables using printk calls within the function show_floppy in drivers/block/floppy.c. An attacker can read this information from dmesg and use the addresses to find the locations of kernel code and data and bypass kernel security protections such as KASLR.	linux	Unchanged	Investigate	Investigate	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3392
1549	CVE-2018-7263	MEDIUM	CRITICAL	The mad_decoder_run() function in decoder.c in Underbit libmad through 0.15.1b allows remote attackers to cause a denial of service (SIGABRT because of double free or corruption) or possibly have unspecified other impact via a crafted file. NOTE: this may overlap CVE-2017-11552.	libmad	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3356
1550	CVE-2018-7262	MEDIUM	HIGH	In Ceph before 12.2.3 and 13.x through 13.0.1, the rgw_civetweb.cc RGWCivetWeb::init_env function in radosgw doesn't handle malformed HTTP headers properly, allowing for denial of service.	ceph	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3667
1551	CVE-2018-7260	LOW	MEDIUM	Cross-site scripting (XSS) vulnerability in db_central_columns.php in phpMyAdmin before 4.7.8 allows remote authenticated users to inject arbitrary web script or HTML via a crafted URL.	phpmyadmin	Unchanged	Not vulnerable	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3369
1552	CVE-2018-7254	MEDIUM	HIGH	The ParseCaffHeaderConfig function of the cli/caff.c file of WavPack 5.1.0 allows a remote attacker to cause a denial-of-service (global buffer over-read), or possibly trigger a buffer overflow or incorrect memory allocation, via a maliciously crafted CAF file.	wavpack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3428
1553	CVE-2018-7253	MEDIUM	HIGH	The ParseDsdiffHeaderConfig function of the cli/dsdiff.c file of WavPack 5.1.0 allows a remote attacker to cause a denial-of-service (heap-based buffer over-read) or possibly overwrite the heap via a maliciously crafted DSDIFF file.	wavpack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3351
1554	CVE-2018-7247	HIGH	CRITICAL	An issue was discovered in pixHtmlViewer in prog/htmlviewer.c in Leptonica before 1.75.3. Unsanitized input (rootname) can overflow a buffer, leading potentially to arbitrary code execution or possibly unspecified other impact.	leptonica	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3325
1555	CVE-2018-7226	HIGH	CRITICAL	An issue was discovered in vcSetXCutTextProc() in VNConsole.c in LinuxVNC and VNCommand from the LibVNC/vncterm distribution through 0.9.10. Missing sanitization of the client-specified message length may cause integer overflow or possibly have unspecified other impact via a specially crafted VNC packet.	libvnc	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3336
1556	CVE-2018-7225	HIGH	CRITICAL	An issue was discovered in LibVNCServer through 0.9.11. rfbProcessClientNormalMessage() in rfbserver.c does not sanitize msg.cct.length, leading to access to uninitialized and potentially sensitive data or possibly unspecified other impact (e.g., an integer overflow) via specially crafted VNC packets.	libvncserver	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3410
1557	CVE-2018-7208	MEDIUM	HIGH	In the coff_pointerize_aux function in coffgen.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.30, an index is not validated, which allows remote attackers to cause a denial of service (segmentation fault) or possibly have unspecified other impact via a crafted file, as demonstrated by objcopy of a COFF object.	binutils	Unchanged	8.0.0.26	9.0.0.15	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3324
1558	CVE-2018-7191	Medium	MEDIUM	In the tun subsystem in the Linux kernel before 4.13.14, dev_get_valid_name is not called before register_netdevice. This allows local users to cause a denial of service (NULL pointer dereference and panic) via an ioctl(TUNSETIFF) call with a dev name containing a / character. This is similar to CVE-2013-4343.	linux	Unchanged	8.0.0.31	9.0.0.22	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4093
1559	CVE-2018-7187	HIGH	HIGH	The go get implementation in Go 1.9.4, when the -insecure command-line option is used, does not validate the import path (get/vcs.go only checks for :// anywhere in the string), which allows remote attackers to execute arbitrary OS commands via a crafted web site.	go	Unchanged	Investigate	Won't Fix	10.17.41.14	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3418
1560	CVE-2018-7186	HIGH	CRITICAL	Leptonica before 1.75.3 does not limit the number of characters in a %s format argument to fscanf or sscanf, which allows remote attackers to cause a denial of service (stack-based buffer overflow) or possibly have unspecified other impact via a long string, as demonstrated by the gplotRead and ptaReadStream functions.	leptonica	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3427
1561	CVE-2018-7185	Medium	Low	The NTP Protocol allows for both non-authenticated and authenticated associations, in client/server, symmetric (peer), and several broadcast modes. In addition to the basic NTP operational modes, symmetric mode and broadcast servers can support an interleaved mode of operation. In ntp-4.2.8p4 a bug was inadvertently introduced into the protocol engine that allows a non- uthenticated zero-origin (reset) packet to reset an authenticated interleaved peer association. If an attacker can send a packet with a zero-origin timestamp and the source IP address of the "other side" of an interleaved association, the 'victim' ntpd will reset its association. The attacker must continue sending these packets in order to maintain the disruption of the association. In ntp-4.0.0 thru ntp-4.2.8p6, interleave mode could be entered dynamically. As of ntp-4.2.8p7, interleaved mode must be explicitly configured/enabled.	ntp	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3339
1562	CVE-2018-7184	Medium	Low	The fix for NtpBug2952 was incomplete, and while it fixed one problem it created another. Specifically, it drops bad packets before updating the "received" timestamp. This means a third-party can inject a packet with a zero-origin timestamp, meaning the sender wants to reset the association, and the transmit timestamp in this bogus packet will be saved as the most recent "received" timestamp. The real remote peer does not know this value and this will disrupt the association until the association resets.	ntp	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3411

	A	B	C	D	E	F	G	H	I	J	K	L	M
1563	CVE-2018-7183	Medium	Medium	ntpq is a monitoring and control program for ntpd. decodearr() is an internal function of ntpq that is used to -- wait for it -- decode an array in a response string when formatted data is being displayed. This is a problem in affected versions of ntpq if a maliciously-altered ntpd returns an array result that will trip this bug, or if a bad actor is able to read an ntpq request on its way to a remote ntpd server and forge and send a response before the remote ntpd sends its response. It's potentially possible that the malicious data could become injectable/executable code.	ntp	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3437
1564	CVE-2018-7182	Medium	Medium	ctl_getitem() is used by ntpd to process incoming mode 6 packets. A malicious mode 6 packet can be sent to an ntpd instance, and if the ntpd instance is from 4.2.8p6 thru 4.2.8p10, that will cause ctl_getitem() to read past the end of its buffer. displayed. This is a problem in affected versions of ntpq if a maliciously-altered ntpd returns an array result that will trip this bug, or if a bad actor is able to read an ntpq request on its way to a remote ntpd server and forge and send a response before the remote ntpd sends its response. It's potentially possible that the malicious data could become injectable/executable code.	ntp	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3417
1565	CVE-2018-7170	Low	Low	ntpd can be vulnerable to Sybil attacks. If a system is set up to use a trustedkey and if one is not using the feature introduced in ntp-4.2.8p6 allowing an optional 4th field in the ntp.keys file to specify which IPs can serve time, a malicious authenticated peer -- i.e. one where the attacker knows the private symmetric key -- can create arbitrarily-many ephemeral associations in order to win the clock selection of ntpd and modify a victim's clock. Three additional protections are offered in ntp-4.2.8p11. One is the new noepeer directive, which disables symmetric passive ephemeral peering. Another is the new ippeerlimit directive, which limits the number of peers that can be created from an IP. The third extends the functionality of the 4th field in the ntp.keys file to include specifying a subnet range.	ntp	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3399
1566	CVE-2018-7169	MEDIUM	MEDIUM	An issue was discovered in shadow 4.5. newgidmap (in shadow-utils) is setuid and allows an unprivileged user to be placed in a user namespace where setgroups(2) is permitted. This allows an attacker to remove themselves from a supplementary group, which may allow access to certain filesystem paths if the administrator has used group blacklisting (e.g., chmod g-rwx) to restrict access to paths. This flaw effectively reverts a security feature in the kernel (in particular, the /proc/self/setgroups knob) to prevent this sort of privilege escalation.	shadow	Unchanged	8.0.0.26	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3341
1567	CVE-2018-7160	MEDIUM	HIGH	The Node.js inspector, in 6.x and later is vulnerable to a DNS rebinding attack which could be exploited to perform remote code execution. An attack is possible from malicious websites open in a web browser on the same computer, or another computer with network access to the computer running the Node.js process. A malicious website could use a DNS rebinding attack to trick the web browser to bypass same-origin-policy checks and to allow HTTP connections to localhost or to hosts on the local network. If a Node.js process with the debug port active is running on localhost or on a host on the local network, the malicious website could connect to it as a debugger, and get full code execution access.	nodejs	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4030
1568	CVE-2018-7159	MEDIUM	MEDIUM	The HTTP parser in all current versions of Node.js ignores spaces in the `Content-Length` header, allowing input such as `Content-Length: 1 2` to be interpreted as having a value of `12`. The HTTP specification does not allow for spaces in the `Content-Length` value and the Node.js HTTP parser has been brought into line on this particular difference. The security risk of this flaw to Node.js users is considered to be VERY LOW as it is difficult, and may be impossible, to craft an attack that makes use of this flaw in a way that could not already be achieved by supplying an incorrect value for `Content-Length`. Vulnerabilities may exist in user-code that make incorrect assumptions about the potential accuracy of this value compared to the actual length of the data supplied. Node.js users crafting lower-level HTTP utilities are advised to re-check the length of any input supplied after parsing is complete.	nodejs	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4042
1569	CVE-2018-7158	MEDIUM	HIGH	The ``path`` module in the Node.js 4.x release line contains a potential regular expression denial of service (ReDoS) vector. The code in question was replaced in Node.js 6.x and later so this vulnerability only impacts all versions of Node.js 4.x. The regular expression, `splitPathRe`, used within the ``path`` module for the various path parsing functions, including `path.dirname()`, `path.extname()` and `path.parse()` was structured in such a way as to allow an attacker to craft a string, that when passed through one of these functions, could take a significant amount of time to evaluate, potentially leading to a full denial of service.	nodejs	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4046
1570	CVE-2018-7054	High	Critical	An issue was discovered in Irssi before 1.0.7 and 1.1.x before 1.1.1. There is a use-after-free when a server is disconnected during netsplits. NOTE: this issue exists because of an incomplete fix for CVE-2017-7191.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3389
1571	CVE-2018-7053	High	Critical	An issue was discovered in Irssi before 1.0.7 and 1.1.x before 1.1.1. There is a use-after-free when SASL messages are received in an unexpected order.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3310
1572	CVE-2018-7052	Medium	High	An issue was discovered in Irssi before 1.0.7 and 1.1.x before 1.1.1. When the number of windows exceeds the available space, a crash due to a NULL pointer dereference would occur.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3354

1594	CVE-2018-6574	HIGH	CRITICAL	Go before 1.8.7, Go 1.9.x before 1.9.4, and Go 1.10 pre-releases before Go 1.10rc2 allow go get remote command execution during source code build, by leveraging the gcc or clang plugin feature, because -fplugin= and -plugin= arguments were not blocked.	go	Unchanged	Investigate	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3396
1595	CVE-2018-6559	LOW	LOW	The Linux kernel, as used in Ubuntu 18.04 LTS and Ubuntu 18.10, allows local users to obtain names of files in which they would not normally be able to access via an overlayfs mount inside of a user namespace.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4872
1596	CVE-2018-6557	MEDIUM	HIGH	The MOTD update script in the base-files package in Ubuntu 18.04 LTS before 10.1ubuntu2.2, and Ubuntu 18.10 before 10.1ubuntu6 incorrectly handled temporary files. A local attacker could use this issue to cause a denial of service, or possibly escalate privileges if kernel symlink restrictions were disabled.	base-files	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4597
1597	CVE-2018-6555	HIGH	HIGH	The irda_setsockopt function in net/irda/af_irda.c and later in drivers/staging/irda/net/af_irda.c in the Linux kernel before 4.17 allows local users to cause a denial of service (ias_object use-after-free and system crash) or possibly have unspecified other impact via an AF_IRDA socket.	linux	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4682
1598	CVE-2018-6554	MEDIUM	MEDIUM	Memory leak in the irda_bind function in net/irda/af_irda.c and later in drivers/staging/irda/net/af_irda.c in the Linux kernel before 4.17 allows local users to cause a denial of service (memory consumption) by repeatedly binding an AF_IRDA socket.	linux	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4701
1599	CVE-2018-6553	MEDIUM	HIGH	The CUPS AppArmor profile incorrectly confined the dnssd backend due to use of hard links. A local attacker could possibly use this issue to escape confinement. This flaw affects versions prior to 2.2.7-1ubuntu2.1 in Ubuntu 18.04 LTS, prior to 2.2.4-7ubuntu3.1 in Ubuntu 17.10, prior to 2.1.3-4ubuntu0.5 in Ubuntu 16.04 LTS, and prior to 1.7.2-0ubuntu1.10 in Ubuntu 14.04 LTS.	cups	Unchanged	Investigate	Investigate	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4533
1600	CVE-2018-6551	High	Critical	The malloc implementation in the GNU C Library (aka glibc or libc6), from version 2.24 to 2.26 on powerpc, and only in version 2.26 on i386, did not properly handle malloc calls with arguments close to SIZE_MAX and could return a pointer to a heap region that is smaller than requested, eventually leading to heap corruption.	glibc	Unchanged	8.0.0.26	9.0.0.15	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3348
1601	CVE-2018-6543	Medium	High	In GNU Binutils 2.30, there's an integer overflow in the function load_specific_debug_section() in objdump.c, which results in `malloc()` with 0 size. A crafted ELF file allows remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact.	binutils	Unchanged	8.0.0.26	9.0.0.15	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3394
1602	CVE-2018-6485	High	Critical	An integer overflow in the implementation of the posix_memalign in memalign functions in the GNU C Library (aka glibc or libc6) 2.26 and earlier could cause these functions to return a pointer to a heap area that is too small, potentially leading to heap corruption.	glibc	Unchanged	8.0.0.26	9.0.0.15	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3330
1603	CVE-2018-6459	MEDIUM	MEDIUM	The rsa_pss_params_parse function in libstrongswan/credentials/keys/signature_params.c in strongSwan 5.6.1 allows remote attackers to cause a denial of service via a crafted RSASSA-PSS signature that lacks a mask generation function parameter.	strongswan	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3317
1604	CVE-2018-6412	Medium	High	In the function sbusfb_ioctl_helper() in drivers/video/fbdev/sbuslib.c in the Linux kernel through 4.15, an integer signedness error allows arbitrary information leakage for the FBIOPUTCMAP_SPARC and FBIOGETCMAP_SPARC commands.	linux	Unchanged	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3378
1605	CVE-2018-6405	Medium	Medium	In the ReadDCMImage function in coders/dcm.c in ImageMagick before 7.0.7-23, each redmap, greenmap, and bluemap variable can be overwritten by a new pointer. The previous pointer is lost, which leads to a memory leak. This allows remote attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3350
1606	CVE-2018-6392	MEDIUM	MEDIUM	The filter_slice function in libavfilter/vf_transpose.c in FFmpeg through 3.4.1 allows remote attackers to cause a denial of service (out-of-array access) via a crafted MP4 file.	ffmpeg	Unchanged	Won't Fix	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3199
1607	CVE-2018-6360	MEDIUM	HIGH	mpv through 0.28.0 allows remote attackers to execute arbitrary code via a crafted web site, because it reads HTML documents containing VIDEO elements, and accepts arbitrary URLs in a src attribute without a protocol whitelist in player/lua/ytdl_hook.lua. For example, an av://lavfi:ladspa=file= URL signifies that the product should call dlopen on a shared object file located at an arbitrary local pathname. The issue exists because the product does not consider that youtube-dl can provide a potentially unsafe URL.	mpv	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3224
1608	CVE-2018-6323	MEDIUM	HIGH	The elf_object_p function in elfcode.h in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29.1, has an unsigned integer overflow because bfd_size_type multiplication is not used. A crafted ELF file allows remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact.	binutils	Unchanged	8.0.0.25	9.0.0.15	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3242
1609	CVE-2018-6307	HIGH	CRITICAL	LibVNC before commit ca2a5ac02fbbadd0a21fabba779c1ea69173d10b contains heap use-after-free vulnerability in server code of file transfer extension that can result remote code execution.	libvncserver	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3309
1610	CVE-2018-6003	MEDIUM	HIGH	An issue was discovered in the _asn1_decode_simple_ber function in decoding.c in GNU Libtasn1 before 4.13. Unlimited recursion in the BER decoder leads to stack exhaustion and DoS.	libtasn1	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3188
1611	CVE-2018-5995	LOW	MEDIUM	The pcpu_embed_first_chunk function in mm/percpu.c in the Linux kernel through 4.14.14 allows local users to obtain sensitive address information by reading dmesg data from a pages/cpu printk call.	linux	Unchanged	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4523
1612	CVE-2018-5953	LOW	MEDIUM	The swiotlb_print_info function in lib/swiotlb.c in the Linux kernel through 4.14.14 allows local users to obtain sensitive address information by reading dmesg data from a software IO TLB printk call.	linux	Unchanged	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4548

	A	B	C	D	E	F	G	H	I	J	K	L	M
1613	CVE-2018-5873	MEDIUM	HIGH	An issue was discovered in the __ns_get_path function in fs/nsfs.c in the Linux kernel before 4.11. Due to a race condition when accessing files, a Use After Free condition can occur. This also affects all Android releases from CAF using the Linux kernel (Android for MSM, Firefox OS for MSM, QRD Android) before security patch level 2018-07-05.	linux	Unchanged	8.0.0.27	9.0.0.17	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4312
1614	CVE-2018-5848	MEDIUM	HIGH	In the function wmi_set_ie(), the length validation code does not handle unsigned integer overflow properly. As a result, a large value of the 'ie_len' argument can cause a buffer overflow in all Android releases from CAF (Android for MSM, Firefox OS for MSM, QRD Android) using the Linux Kernel.	linux	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4856
1615	CVE-2018-5814	MEDIUM	HIGH	In the Linux Kernel before version 4.16.11, 4.14.43, 4.9.102, and 4.4.133, multiple race condition errors when handling probe, disconnect, and rebind operations can be exploited to trigger a use-after-free condition or a NULL pointer dereference by sending multiple USB over IP packets.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4126
1616	CVE-2018-5803	MEDIUM	MEDIUM	In the Linux Kernel before version 4.15.8, 4.14.25, 4.9.87, 4.4.121, 4.1.51, and 3.2.102, an error in the _sctp_make_chunk() function (net/sctp/sm_make_chunk.c) when handling SCTP packets length can be exploited to cause a kernel crash.	linux	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4117
1617	CVE-2018-5785	MEDIUM	MEDIUM	In OpenJPEG 2.3.0, there is an integer overflow caused by an out-of-bounds left shift in the opj_j2k_setup_encoder function (openjp2/j2k.c). Remote attackers could leverage this vulnerability to cause a denial of service via a crafted bmp file.	openjpeg	Unchanged	Won't Fix	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3227
1618	CVE-2018-5784	MEDIUM	MEDIUM	In LibTIFF 4.0.9, there is an uncontrolled resource consumption in the TIFFSetDirectory function of tif_dir.c. Remote attackers could leverage this vulnerability to cause a denial of service via a crafted tif file. This occurs because the declared number of directory entries is not validated against the actual number of directory entries.	libtiff	Unchanged	8.0.0.26	9.0.0.15	10.17.41.5	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3218
1619	CVE-2018-5766	MEDIUM	HIGH	In Libav through 12.2, there is an invalid memcpy in the av_packet_ref function of libavcodec/avpacket.c. Remote attackers could leverage this vulnerability to cause a denial of service (segmentation fault) via a crafted avi file.	libav	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3178
1620	CVE-2018-5764	MEDIUM	HIGH	The parse_arguments function in options.c in rsyncd in rsync before 3.1.3 does not prevent multiple --protect-args uses, which allows remote attackers to bypass an argument-sanitization protection mechanism.	rsync	Unchanged	8.0.0.25	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3182
1621	CVE-2018-5750	LOW	MEDIUM	The acpi_smbus_hc_add function in drivers/acpi/sbshc.c in the Linux kernel through 4.14.15 allows local users to obtain sensitive address information by reading dmesg data from an SBS HC printk call.	linux	Unchanged	8.0.0.26	9.0.0.15	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3233
1622	CVE-2018-5748	MEDIUM	HIGH	qemu/qemu_monitor.c in libvirt allows attackers to cause a denial of service (memory consumption) via a large QEMU reply.	libvirt	Unchanged	8.0.0.25	9.0.0.15	10.17.41.6	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3192
1623	CVE-2018-5745	LOW	MEDIUM	managed-keys is a feature which allows a BIND resolver to automatically maintain the keys used by trust anchors which operators configure for use in DNSSEC validation. Due to an error in the managed-keys feature it is possible for a BIND server which uses managed-keys to exit due to an assertion failure if, during key rollover, a trust anchor's keys are replaced with keys which use an unsupported algorithm. Versions affected: BIND 9.9.0 -> 9.10.8-P1, 9.11.0 -> 9.11.5-P1, 9.12.0 -> 9.12.3-P1, and versions 9.9.3-S1 -> 9.11.5-S3 of BIND 9 Supported Preview Edition. Versions 9.13.0 -> 9.13.6 of the 9.13 development branch are also affected. Versions prior to BIND 9.9.0 have not been evaluated for vulnerability to CVE-2018-5745.	bind	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.12	Not vulnerable	Not vulnerable	LIN1018-5072
1624	CVE-2018-5744	MEDIUM	HIGH	A failure to free memory can occur when processing messages having a specific combination of EDNS options. Versions affected are: BIND 9.10.7 -> 9.10.8-P1, 9.11.3 -> 9.11.5-P1, 9.12.0 -> 9.12.3-P1, and versions 9.10.7-S1 -> 9.11.5-S3 of BIND 9 Supported Preview Edition. Versions 9.13.0 -> 9.13.6 of the 9.13 development branch are also affected.	bind	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.12	Not vulnerable	Not vulnerable	LIN1018-5073
1625	CVE-2018-5743	MEDIUM	HIGH	By design, BIND is intended to limit the number of TCP clients that can be connected at any given time. The number of allowed connections is a tunable parameter which, if unset, defaults to a conservative value for most servers. Unfortunately, the code which was intended to limit the number of simultaneous connections contained an error which could be exploited to grow the number of simultaneous connections beyond this limit. Versions affected: BIND 9.9.0 -> 9.10.8-P1, 9.11.0 -> 9.11.6, 9.12.0 -> 9.12.4, 9.14.0. BIND 9 Supported Preview Edition versions 9.9.3-S1 -> 9.11.5-S3, and 9.11.5-S5. Versions 9.13.0 -> 9.13.7 of the 9.13 development branch are also affected. Versions prior to BIND 9.9.0 have not been evaluated for vulnerability to CVE-2018-5743.	bind	Unchanged	Investigate	Investigate	Investigate	10.18.44.12	10.19.45.2	10.20.3.0	LIN1018-5074
1626	CVE-2018-5741	MEDIUM	MEDIUM	ISC BIND before releases 9.11.4-P2 and 9.12.2-P2 does not properly document the behaviour of the krb5-subdomain and ms-subdomain update policies. This incorrect documentation could mislead operators into believing that policies they had configured were more restrictive than they actually were.	bind	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	Vulnerable	Not vulnerable	Vulnerable	LIN10-4776
1627	CVE-2018-5740	MEDIUM	HIGH	BIND through versions 9.8.8, 9.9.13, 9.10.8, 9.11.4, 9.12.2 and 9.13.2 have a flaw in the "deny-answer-aliases" feature that can cause an INSIST assertion failure in named. A remote attacker could exploit this to cause named to crash.	bind	Unchanged	8.0.0.31	Vulnerable	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4593

	A	B	C	D	E	F	G	H	I	J	K	L	M
1628	CVE-2018-5739	Medium	HIGH	An extension to hooks capabilities which debuted in Kea 1.4.0 introduced a memory leak for operators who are using certain hooks library facilities. In order to support multiple requests simultaneously, Kea 1.4 added a callout handle store but unfortunately the initial implementation of this store does not properly free memory in every case. Hooks which make use of query4 or query6 parameters in their callouts can leak memory, resulting in the eventual exhaustion of available memory and subsequent failure of the server process. Affects Kea DHCP 1.4.0.	kea	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3530
1629	CVE-2018-5738	MEDIUM	HIGH	BIND was found to not properly handle certain configuration options, unintentionally permiting all clients to perform recursive queries. This occurs when "recursion yes;" is in effect and no match list values are provided for "allow-query-cache" or "allow-query" for the setting of "allow-recursion" to inherit a setting of all hosts from the "allow-query" setting default.	bind	Unchanged	8.0.0.27	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4273
1630	CVE-2018-5737	MEDIUM	HIGH	BIND versions 9.12.0 and 9.12.1 are vulnerable to problematic interaction between the serve-stale feature and NSEC aggressive negative caching can in some cases cause undesirable behavior from named, such as a recursion loop or an assertion failure resulting in termination of the named process.	bind	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4295
1631	CVE-2018-5736	LOW	MEDIUM	BIND versions 9.12.0 and 9.12.1 have an error in zone database reference counting that can lead to an assertion failure if a server attempts several transfers of a slave zone in quick succession.	bind	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4288
1632	CVE-2018-5735	MEDIUM	HIGH	It was discovered that Bind incorrectly handled DNSSEC validation. An attacker could possibly use this to cause a denial of service.	bind	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4322
1633	CVE-2018-5734	MEDIUM	HIGH	While handling a particular type of malformed packet BIND erroneously selects a SERVFAIL rcode instead of a FORMERR rcode. If the receiving view has the SERVFAIL cache feature enabled, this can trigger an assertion failure in badcache.c when the request doesn't contain all of the expected information.	bind	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4298
1634	CVE-2018-5733	MEDIUM	HIGH	A malicious client which is allowed to send very large amounts of traffic (billions of packets) to a DHCP server can eventually overflow a 32-bit reference counter, potentially causing dhcpd to crash.	dhcp	Unchanged	8.0.0.27	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4315
1635	CVE-2018-5732	MEDIUM	HIGH	Failure to properly bounds check a buffer used for processing DHCP options allows a malicious server (or an entity masquerading as a server) to cause a buffer overflow (and resulting crash) in dhclient by sending a response containing a specially constructed options section.	dhcp	Unchanged	8.0.0.27	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4285
1636	CVE-2018-5730	MEDIUM	LOW	MIT krb5 1.6 or later allows an authenticated kadmin with permission to add principals to an LDAP Kerberos database to circumvent a DN containership check by supplying both a linkdn and containerdn database argument, or by supplying a DN string which is a left extension of a container DN string but is not hierarchically within the container DN.	krb5	Unchanged	8.0.0.26	9.0.0.15	10.17.41.6	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3562
1637	CVE-2018-5729	MEDIUM	MEDIUM	MIT krb5 1.6 or later allows an authenticated kadmin with permission to add principals to an LDAP Kerberos database to cause a denial of service (NULL pointer dereference) or bypass a DN container check by supplying tagged data that is internal to the database module.	krb5	Unchanged	8.0.0.26	9.0.0.15	10.17.41.6	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3526
1638	CVE-2018-5727	MEDIUM	MEDIUM	In OpenJPEG 2.3.0, there is an integer overflow vulnerability in the opj_t1_encode_cblks function (openjp2/t1.c). Remote attackers could leverage this vulnerability to cause a denial of service via a crafted bmp file.	openjpeg	Unchanged	Won't Fix	9.0.0.22	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3235
1639	CVE-2018-5712	MEDIUM	MEDIUM	An issue was discovered in PHP before 5.6.33, 7.0.x before 7.0.27, 7.1.x before 7.1.13, and 7.2.x before 7.2.1. There is Reflected XSS on the PHAR 404 error page via the URI of a request for a .phar file.	php	Unchanged	8.0.0.26	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3187
1640	CVE-2018-5711	MEDIUM	MEDIUM	gd_gif_in.c in the GD Graphics Library (aka libgd), as used in PHP before 5.6.33, 7.0.x before 7.0.27, 7.1.x before 7.1.13, and 7.2.x before 7.2.1, has an integer signedness error that leads to an infinite loop via a crafted GIF file, as demonstrated by a call to the imagecreatefromgif or imagecreatefromstring PHP function. This is related to GetCode_ and gdImageCreateFromGifCtx.	libgd&php	Unchanged	8.0.0.26	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3204
1641	CVE-2018-5710	MEDIUM	MEDIUM	An issue was discovered in MIT Kerberos 5 (aka krb5) through 1.16. The pre-defined function strlen is getting a NULL string as a parameter value in plugins/kdb/ldap/libkdb_ldap/ldap_principal2.c in the Key Distribution Center (KDC), which allows remote authenticated users to cause a denial of service (NULL pointer dereference) via a modified kadmin client.	krb5	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3226
1642	CVE-2018-5709	MEDIUM	HIGH	An issue was discovered in MIT Kerberos 5 (aka krb5) through 1.16. There is a variable dbentry->n_key_data in kadmin/dbutil/dump.c that can store 16-bit data but unknowingly the developer has assigned a u4 variable to it, which is for 32-bit data. An attacker can use this vulnerability to affect other artifacts of the database as we know that a Kerberos database dump file contains trusted data.	krb5	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Vulnerable	LIN10-3239
1643	CVE-2018-5704	HIGH	CRITICAL	Open On-Chip Debugger (OpenOCD) 0.10.0 does not block attempts to use HTTP POST for sending data to 127.0.0.1 port 4444, which allows remote attackers to conduct cross-protocol scripting attacks, and consequently execute arbitrary commands, via a crafted web site.	openocd	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3195
1644	CVE-2018-5703	HIGH	CRITICAL	The tcp_v6_syn_recv_sock function in net/ipv6/tcp_ipv6.c in the Linux kernel through 4.14.11 allows attackers to cause a denial of service (slab out-of-bounds write) or possibly have unspecified other impact via vectors involving TLS.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3244

	A	B	C	D	E	F	G	H	I	J	K	L	M
1645	CVE-2018-5684	MEDIUM	HIGH	In Libav 12.1, there is an invalid memcpy call in the ff_mov_read_stsd_entries function of libavformat/mov.c. Remote attackers could leverage this vulnerability to cause a denial of service (segmentation fault) and program failure with a crafted avi file.	libav	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3098
1646	CVE-2018-5683	LOW	MEDIUM	The vga_draw_text function in Qemu allows local OS guest privileged users to cause a denial of service (out-of-bounds read and QEMU process crash) by leveraging improper memory address validation.	qemu	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3181
1647	CVE-2018-5407	LOW	MEDIUM	A flaw was found in the Intel processor execution engine sharing on SMT (e.g. Hyper-Threading) architectures. An attacker running a malicious process on the same core of the processor as the victim process, can extract certain secret information. The reporter is able to steal an OpenSSL (<= 1.1.0h) P-384 private key from a TLS server using this new side-channel vector. It is a local attack in the sense that the malicious process must be running on the same physical core as the victim (an openSSL-powered TLS server in this case). But in general any application which branches on a secret value may be affected.	openssl	Unchanged	8.0.0.29	9.0.0.20	10.17.41.13	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4951
1648	CVE-2018-5391	HIGH	HIGH	A flaw named FragmentSmack was found in the way the Linux kernel handled reassembly of fragmented IPv4 and IPv6 packets. A remote attacker could use this flaw to trigger time and calculation expensive fragment reassembly algorithms by sending specially crafted packets which could lead to a CPU saturation and hence a denial of service on the system.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4365
1649	CVE-2018-5390	HIGH	HIGH	Linux kernel versions 4.9+ can be forced to make very expensive calls to tcp_collapse_ofo_queue() and tcp_prune_ofo_queue() for every incoming packet which can lead to a denial of service.	linux	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4366
1650	CVE-2018-5388	MEDIUM	MEDIUM	In stroke_socket.c in strongSwan before 5.6.3, a missing packet length check could allow a buffer underflow, which may lead to resource exhaustion and denial of service while reading from the socket.	strongswan	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4103
1651	CVE-2018-5381	MEDIUM	HIGH	The Quagga BGP daemon (bgpd) prior to version 1.2.3 has a bug in its parsing of Capabilities in BGP OPEN messages, in the bgp_packet.c:bgp_capability_msg_parse function. The parser can enter an infinite loop on invalid capabilities if a Multi-Protocol capability does not have a recognized AFI/SAFI, causing a denial of service.	quagga	Unchanged	8.0.0.26	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3384
1652	CVE-2018-5380	MEDIUM	MEDIUM	The Quagga BGP daemon (bgpd) prior to version 1.2.3 can overrun internal BGP code-to-string conversion tables used for debug by 1 pointer value, based on input.	quagga	Unchanged	8.0.0.26	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3424
1653	CVE-2018-5379	HIGH	CRITICAL	The Quagga BGP daemon (bgpd) prior to version 1.2.3 can double-free memory when processing certain forms of UPDATE message, containing cluster-list and/or unknown attributes. A successful attack could cause a denial of service or potentially allow an attacker to execute arbitrary code.	quagga	Unchanged	8.0.0.26	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3383
1654	CVE-2018-5378	MEDIUM	MEDIUM	The Quagga BGP daemon (bgpd) prior to version 1.2.3 does not properly bounds check the data sent with a NOTIFY to a peer, if an attribute length is invalid. Arbitrary data from the bgpd process may be sent over the network to a peer and/or bgpd may crash.	quagga	Unchanged	8.0.0.26	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3334
1655	CVE-2018-5360	MEDIUM	HIGH	LibTIFF 4.0.9 mishandles the reading of TIFF files, as demonstrated by a heap-based buffer over-read in the ReadTIFFImage function in coders/tiff.c in GraphicsMagick 1.3.27.	libtiff	Unchanged	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3072
1656	CVE-2018-5358	MEDIUM	MEDIUM	ImageMagick 7.0.7-22 Q16 has memory leaks in the EncodeImageAttributes function in coders/json.c, as demonstrated by the ReadPSDLayersInternal function in coders/psd.c.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3052
1657	CVE-2018-5357	MEDIUM	MEDIUM	ImageMagick 7.0.7-22 Q16 has memory leaks in the ReadDCMImage function in coders/dcm.c.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3082
1658	CVE-2018-5344	MEDIUM	HIGH	In the Linux kernel through 4.14.13, drivers/block/loop.c mishandles lo_release serialization, which allows attackers to cause a denial of service (__lock_acquire use-after-free) or possibly have unspecified other impact.	linux	Unchanged	8.0.0.26	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3101
1659	CVE-2018-5336	MEDIUM	MEDIUM	In Wireshark 2.4.0 to 2.4.3 and 2.2.0 to 2.2.11, the JSON, XML, NTP, XMPP, and GDB dissectors could crash. This was addressed in epan/tvbparse.c by limiting the recursion depth.	wireshark	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3090
1660	CVE-2018-5335	MEDIUM	MEDIUM	In Wireshark 2.4.0 to 2.4.3 and 2.2.0 to 2.2.11, the WCP dissector could crash. This was addressed in epan/dissectors/packet-wcp.c by validating the available buffer length.	wireshark	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3083
1661	CVE-2018-5334	MEDIUM	MEDIUM	In Wireshark 2.4.0 to 2.4.3 and 2.2.0 to 2.2.11, the IxVeriWave file parser could crash. This was addressed in wiretap/vwr.c by correcting the signature timestamp bounds checks.	wireshark	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3093
1662	CVE-2018-5333	MEDIUM	MEDIUM	In the Linux kernel through 4.14.13, the rds_cmsg_atomic function in net/rds/rdma.c mishandles cases where page pinning fails or an invalid address is supplied, leading to an rds_atomic_free_op NULL pointer dereference.	linux	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3066
1663	CVE-2018-5332	HIGH	HIGH	In the Linux kernel through 4.14.13, the rds_message_alloc_sgs() function does not validate a value that is used during DMA page allocation, leading to a heap-based out-of-bounds write (related to the rds_rdma_extra_size function in net/rds/rdma.c).	linux	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3097
1664	CVE-2018-5269	MEDIUM	MEDIUM	In OpenCV 3.3.1, an assertion failure happens in cv::RBaseStream::setPos in modules/imgcodecs/src/bitstrm.cpp because of an incorrect integer cast.	opencv	Unchanged	Won't Fix	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3094
1665	CVE-2018-5268	MEDIUM	MEDIUM	In OpenCV 3.3.1, a heap-based buffer overflow happens in cv::Jpeg2KDecoder::readComponent8u in modules/imgcodecs/src/grfmt_jpeg2000.cpp when parsing a crafted image file.	opencv	Unchanged	Won't Fix	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3074

1669	CVE-2018-5208	HIGH	CRITICAL	In Irssi before 1.0.6, a calculation error in the completion code could cause a heap buffer overflow when completing certain strings.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3078
1670	CVE-2018-5207	MEDIUM	HIGH	When using an incomplete variable argument, Irssi before 1.0.6 may access data beyond the end of the string.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3109
1671	CVE-2018-5206	HIGH	CRITICAL	When the channel topic is set without specifying a sender, Irssi before 1.0.6 may dereference a NULL pointer.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3102
1672	CVE-2018-5205	MEDIUM	HIGH	When using incomplete escape codes, Irssi before 1.0.6 may access data beyond the end of the string.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3088
1673	CVE-2018-5146	MEDIUM	HIGH	Codebooks that are not an exact divisor of the partition size are now truncated to fit within the partition.	libvorbis	Unchanged	8.0.0.27	9.0.0.17	Investigate	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4039
1674	CVE-2018-4700			A flaw was found in the CUPS printing server. Insufficient randomness makes session cookies predictable, breaking CSRF protection.	cups	Updated	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3303
1675	CVE-2018-4300	Medium	MEDIUM	The session cookie generated by the CUPS web interface was easy to guess on Linux, allowing unauthorized scripted access to the web interface when the web interface is enabled. This issue affected versions prior to v2.2.10.	cups	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3880
1676	CVE-2018-4183	HIGH	HIGH	The sandbox profile dynamically generated by cupsdCreateProfile() unintentionally allows write access to /etc/cups. This can be used by an attacker that has obtained sandboxed root access to alter /etc/cups/cups-files.conf, leading to unsandboxed root code execution.	cups	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4551
1677	CVE-2018-4182	HIGH	HIGH	It is possible to cause cups-exec to execute backends without a sandbox profile by causing cupsdCreateProfile() to fail. An attacker that has obtained sandboxed root access can accomplish this by setting the CUPS temporary directory to immutable using chflags, which will prevent the profile from being written to disk.	cups	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4524
1678	CVE-2018-4181	MEDIUM	MEDIUM	It was found that a local attacker can perform limited reads of arbitrary files as root by manipulating cupsd.conf.	cups	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4530
1679	CVE-2018-4180	MEDIUM	HIGH	Affected versions of CUPS allow for the SetEnv and PassEnv directives to be specified in the cupsd.conf file, which is editable by non-root users using the cupsctl binary. This allows attacker-controlled environment variables to be passed to CUPS backends, some of which are run as root. By passing malicious values in environment variables to affected backends, it is possible to execute an attacker-supplied binary as root, subject to sandbox restrictions.	cups	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4544
1680	CVE-2018-4022	MEDIUM	HIGH	A use-after-free vulnerability exists in the way MKVToolNix MKVINFO v25.0.0 handles the MKV (matroska) file format. A specially crafted MKV file can cause arbitrary code execution in the context of the current user.	mkvtoolnix	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-7655
1681	CVE-2018-3968	MEDIUM	HIGH	An exploitable vulnerability exists in the verified boot protection of the Das U-Boot from version 2013.07-rc1 to 2014.07-rc2. The affected versions lack proper FIT signature enforcement, which allows an attacker to bypass U-Boot's verified boot and execute an unsigned kernel, embedded in a legacy image format. To trigger this vulnerability, a local attacker needs to be able to supply the image to boot.	u-boot	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3801
1682	CVE-2018-3693	MEDIUM	MEDIUM	Systems with microprocessors utilizing speculative execution and branch prediction may allow unauthorized disclosure of information to an attacker with local user access via a speculative buffer overflow and side-channel analysis.	linux	Unchanged	8.0.0.30	9.0.0.19	10.17.41.14	10.18.44.4	Not vulnerable	Not vulnerable	LIN10-4340
1683	CVE-2018-3665	MEDIUM	MEDIUM	System software utilizing Lazy FP state restore technique on systems using Intel Core-based microprocessors may potentially allow a local process to infer data from another process through a speculative execution side channel.	linux	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4235
1684	CVE-2018-3646	MEDIUM	MEDIUM	Systems with microprocessors utilizing speculative execution and address translations may allow unauthorized disclosure of information residing in the L1 data cache to an attacker with local user access with guest OS privilege via a terminal page fault and a side-channel analysis.	linux	Unchanged	8.0.0.30	9.0.0.18	10.17.41.14	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4573
1685	CVE-2018-3640	MEDIUM	MEDIUM	Systems with microprocessors utilizing speculative execution and that perform speculative reads of system registers may allow unauthorized disclosure of system parameters to an attacker with local user access via a side-channel analysis, aka Rogue System Register Read (RSRE), Variant 3a.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3958
1686	CVE-2018-3639	MEDIUM	MEDIUM	Systems with microprocessors utilizing speculative execution and speculative execution of memory reads before the addresses of all prior memory writes are known may allow unauthorized disclosure of information to an attacker with local user access via a side-channel analysis, aka Speculative Store Bypass (SSB), Variant 4.	linux	Unchanged	8.0.0.29	9.0.0.18	10.17.41.13	10.18.44.4	Not vulnerable	Not vulnerable	LIN10-3957
1687	CVE-2018-3620	MEDIUM	MEDIUM	Systems with microprocessors utilizing speculative execution and address translations may allow unauthorized disclosure of information residing in the L1 data cache to an attacker with local user access via a terminal page fault and a side-channel analysis.	linux	Unchanged	8.0.0.30	9.0.0.18	10.17.41.14	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4572
1688	CVE-2018-3615	MEDIUM	MEDIUM	Systems with microprocessors utilizing speculative execution and Intel software guard extensions (Intel SGX) may allow unauthorized disclosure of information residing in the L1 data cache from an enclave to an attacker with local user access via a side-channel analysis.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4571

1702	CVE-2018-3214	MEDIUM	MEDIUM	Vulnerability in the Java SE, Java SE Embedded, JRockit component of Oracle Java SE (subcomponent: Sound). Supported versions that are affected are Java SE: 6u201, 7u191 and 8u182; Java SE Embedded: 8u181; JRockit: R28.3.19. Easily exploitable vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE, Java SE Embedded, JRockit. Successful attacks of this vulnerability can result in unauthorized ability to cause a partial denial of service (partial DOS) of Java SE, Java SE Embedded, JRockit. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets (in Java SE 8), that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability can also be exploited by using APIs in the specified Component, e.g., through a web service which supplies data to the APIs. CVSS 3.0 Base Score 5.3 (Availability impacts). 1704	CVE-2018-3211	LOW	MEDIUM	Vulnerability in the Java SE, Java SE Embedded component of Oracle Java SE (subcomponent: Serviceability). Supported versions that are affected are Java SE: 8u182 and 11; Java SE Embedded: 8u181. Easily exploitable vulnerability allows low privileged attacker with logon to the infrastructure where Java SE, Java SE Embedded executes to compromise Java SE, Java SE Embedded. Successful attacks require human interaction from a person other than the attacker. Successful attacks of this vulnerability can result in unauthorized creation, deletion or modification access to critical data or all Java SE, Java SE Embedded accessible data as well as unauthorized access to critical data or complete access to all Java SE, Java SE Embedded accessible data. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets (in Java SE 8), that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability does not apply to Java deployments, typically in servers, that load and run only trusted code (e.g., code installed by an administrator). This vulnerability can only be exploited when Java Usage Tracker functionality is being used. CVSS 3.0 Base Score 6.6 (Confidentiality and Integrity impacts). 1764	CVE-2018-2940	Medium	MEDIUM	Vulnerability in the Java SE, Java SE Embedded component of Oracle Java SE (subcomponent: Libraries). Supported versions that are affected are Java SE: 6u191, 7u181, 8u172 and 10.0.1; Java SE Embedded: 8u171. Easily exploitable vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE, Java SE Embedded. Successful attacks require human interaction from a person other than the attacker. Successful attacks of this vulnerability can result in unauthorized read access to a subset of Java SE, Java SE Embedded accessible data. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets, that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability does not apply to Java deployments, typically in servers, that load and run only trusted code (e.g., code installed by an administrator). CVSS 3.0 Base Score 4.3 (Confidentiality impacts). 1824	CVE-2018-2639	MEDIUM	HIGH	Vulnerability in the Java SE component of Oracle Java SE (subcomponent: Deployment). Supported versions that are affected are Java SE: 8u152 and 9.0.1. Difficult to exploit vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE. Successful attacks require human interaction from a person other than the attacker and while the vulnerability is in Java SE, attacks may significantly impact additional products. Successful attacks of this vulnerability can result in takeover of Java SE. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets, that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability does not apply to Java deployments, typically in servers, that load and run only trusted code (e.g., code installed by an administrator). CVSS 3.0 Base Score 8.3 (Confidentiality, Integrity and Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:H/PR:N/UI:R/S:C/C:H/I:H/A:H).	jdk&jre	Unchanged	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-8665
1825	CVE-2018-2638	MEDIUM	HIGH	Vulnerability in the Java SE component of Oracle Java SE (subcomponent: Deployment). Supported versions that are affected are Java SE: 8u152 and 9.0.1. Difficult to exploit vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE. Successful attacks require human interaction from a person other than the attacker and while the vulnerability is in Java SE, attacks may significantly impact additional products. Successful attacks of this vulnerability can result in takeover of Java SE. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets, that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability does not apply to Java deployments, typically in servers, that load and run only trusted code (e.g., code installed by an administrator). CVSS 3.0 Base Score 8.3 (Confidentiality, Integrity and Availability impacts). 1857	CVE-2018-21008	Medium	MEDIUM	An issue was discovered in the Linux kernel before 4.16.7. A use-after-free can be caused by the function rsi_mac80211_detach in the file drivers/net/wireless/rsi/rsi_91x_mac80211.c.	linux	Unchanged	8.0.0.31	9.0.0.24	10.17.41.18	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4840
1858	CVE-2018-20976	Medium	HIGH	An issue was discovered in fs/xfs/xfs_super.c in the Linux kernel before 4.18. A use after free exists, related to xfs_fs_fill_super failure.	linux	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4714
1859	CVE-2018-20969	High	HIGH	do_ed_script in pch.c in GNU patch through 2.7.6 does not block strings beginning with a ! character. NOTE: this is the same commit as for CVE-2019-13638, but the ! syntax is specific to ed, and is unrelated to a shell metacharacter.	patch	Unchanged	8.0.0.31	Investigate	10.17.41.17	10.18.44.10	10.19.45.4	10.20.3.0	LIN1018-4697
1860	CVE-2018-20961	HIGH	CRITICAL	In the Linux kernel before 4.16.4, a double free vulnerability in the f_midi_set_alt function of drivers/usb/gadget/function/f_midi.c in the f_midi driver may allow attackers to cause a denial of service or possibly have unspecified other impact.	linux	Unchanged	Not vulnerable	9.0.0.22	10.17.41.18	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4629
1861	CVE-2018-20856	MEDIUM	HIGH	An issue was discovered in the Linux kernel before 4.18.7. In block/blk-core.c, there is an __blk_drain_queue() use-after-free because a certain error case is mishandled.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.18	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4542
1862	CVE-2018-20855	LOW	MEDIUM	An issue was discovered in the Linux kernel before 4.18.7. In create_qp_common in drivers/infiniband/hw/mlx5/qp.c, mlx5_ib_create_qp_resp was never initialized, resulting in a leak of stack memory to userspace.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.18	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4543
1863	CVE-2018-20854	MEDIUM	HIGH	An issue was discovered in the Linux kernel before 4.20. drivers/phy/mscc/phy-ocelot-serdes.c has an off-by-one error with a resultant ctrl->phys out-of-bounds read.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4544
1864	CVE-2018-20852	MEDIUM	MEDIUM	http.cookiejar.DefaultPolicy.domain_return_ok in Lib/http/cookiejar.py in Python before 3.7.3 does not correctly validate the domain: it can be tricked into sending existing cookies to the wrong server. An attacker may abuse this flaw by using a server with a hostname that has another valid hostname as a suffix (e.g., pythonicexample.com to steal cookies for example.com). When a program uses http.cookiejar.DefaultPolicy and tries to do an HTTP connection to an attacker-controlled server, existing cookies can be leaked to the attacker. This affects 2.x through 2.7.16, 3.x before 3.4.10, 3.5.x before 3.5.7, 3.6.x before 3.6.9, and 3.7.x before 3.7.3.	python	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.9	Not vulnerable	Not vulnerable	LIN1018-4427
1865	CVE-2018-20847	Medium	HIGH	An improper computation of p_tx0, p_tx1, p_ty0 and p_ty1 in the function opj_get_encoding_parameters in openjp2/pi.c in OpenJPEG through 2.3.0 can lead to an integer overflow.	openjpeg	Unchanged	Won't Fix	9.0.0.22	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4359
1866	CVE-2018-20846	Medium	MEDIUM	Out-of-bounds accesses in the functions pi_next_lrcp, pi_next_rlcp, pi_next_rpcl, pi_next_pcrl, pi_next_rpcl, and pi_next_cprl in openmj2/pi.c in OpenJPEG through 2.3.0 allow remote attackers to cause a denial of service (application crash).	openjpeg	Unchanged	Won't Fix	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4358
1867	CVE-2018-20845	Medium	MEDIUM	Division-by-zero vulnerabilities in the functions pi_next_pcrl, pi_next_cprl, and pi_next_rpcl in openmj2/pi.c in OpenJPEG through 2.3.0 allow remote attackers to cause a denial of service (application crash).	openjpeg	Unchanged	Won't Fix	9.0.0.22	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4357
1868	CVE-2018-20843	High	HIGH	In libexpat in Expat before 2.2.7, XML input including XML names that contain a large number of colons could make the XML parser consume a high amount of RAM and CPU resources while processing (enough to be usable for denial-of-service attacks).	expat	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.9	Not vulnerable	Not vulnerable	LIN1018-4365
1869	CVE-2018-20836	High	HIGH	An issue was discovered in the Linux kernel before 4.20. There is a race condition in smp_task_timedout() and smp_task_done() in drivers/scsi/libsas/sas_expander.c, leading to a use-after-free.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4043
1870	CVE-2018-20815	High	CRITICAL	In QEMU 3.1.0, load_device_tree in device_tree.c calls the deprecated load_image function, which has a buffer overflow risk.	qemu	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4250
1871	CVE-2018-20796	Medium	HIGH	In the GNU C Library (aka glibc or libc6) through 2.29, check_dst_limits_calc_pos_1 in posix/regexec.c has Uncontrolled Recursion, as demonstrated by '(\227|(\\1\\1|t1|\\\2537)+' in grep.	glibc	Updated	None	None	None	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3784
1872	CVE-2018-20786	Medium	HIGH	libvterm through 0+bzr726, as used in Vim and other products, mishandles certain out-of-memory conditions, leading to a denial of service (application crash), related to screen.c, state.c, and vterm.c.	vim	Unchanged	Vulnerable	Vulnerable	Vulnerable	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3802

	A	B	C	D	E	F	G	H	I	J	K	L	M
1873	CVE-2018-20784	High	CRITICAL	In the Linux kernel before 4.20.2, kernel/sched/fair.c mishandles leaf cfs_rq's, which allows attackers to cause a denial of service (infinite loop in update_blocked_averages) or possibly have unspecified other impact by inducing a high load.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3715
1874	CVE-2018-20783	Medium	HIGH	In PHP before 5.6.39, 7.x before 7.0.33, 7.1.x before 7.1.25, and 7.2.x before 7.2.13, a buffer over-read in PHAR reading functions may allow an attacker to read allocated or unallocated memory past the actual data when trying to parse a .phar file. This is related to phar_parse_pharfile in ext/phar/phar.c.	php	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3709
1875	CVE-2018-20750	High	CRITICAL	LibVNC through 0.9.12 contains a heap out-of-bounds write vulnerability in libvncserver/rfbserver.c. The fix for CVE-2018-15127 was incomplete.	libvncserver	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3521
1876	CVE-2018-20749	High	CRITICAL	LibVNC before 0.9.12 contains a heap out-of-bounds write vulnerability in libvncserver/rfbserver.c. The fix for CVE-2018-15127 was incomplete.	libvncserver	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3572
1877	CVE-2018-20748	High	CRITICAL	LibVNC before 0.9.12 contains multiple heap out-of-bounds write vulnerabilities in libvncclient/rfbproto.c. The fix for CVE-2018-20019 was incomplete.	libvncserver	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3535
1878	CVE-2018-20712	MEDIUM	MEDIUM	A heap-based buffer over-read exists in the function d_expression_1 in cp-demangle.c in GNU libiberty, as distributed in GNU Binutils 2.31.1. A crafted input can cause segmentation faults, leading to denial-of-service, as demonstrated by c++filt.	binutils	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	LIN1018-3407
1879	CVE-2018-20699	MEDIUM	MEDIUM	Docker Engine before 18.09 allows attackers to cause a denial of service (dockerd memory consumption) via a large integer in a --cpuset-mems or --cpuset-cpus value, related to daemon/daemon_unix.go, pkg/parsers/parsers.go, and pkg/sysinfo/sysinfo.go.	docker	Unchanged	8.0.0.30	Vulnerable	10.17.41.15	10.18.44.4	10.19.45.1	Not vulnerable	LIN1018-3386
1880	CVE-2018-20685	LOW	MEDIUM	In OpenSSH 7.9, scp.c in the scp client allows remote SSH servers to bypass intended access restrictions via the filename of . or an empty filename.	openssh	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3412
1881	CVE-2018-20679	MEDIUM	HIGH	An issue was discovered in BusyBox before 1.30.0. An out of bounds read in udhcp components (consumed by the DHCP server, client, and relay) allows a remote attacker to leak sensitive information from the stack by sending a crafted DHCP message. This is related to verification in udhcp_get_option() in networking/udhcp/common.c that 4-byte options are indeed 4 bytes.	busybox	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3373
1882	CVE-2018-20673	MEDIUM	MEDIUM	The demangle_template function in cplus-dem.c in GNU libiberty, as distributed in GNU Binutils 2.31.1, contains an integer overflow vulnerability (for Create an array for saving the template argument values) that can trigger a heap-based buffer overflow, as demonstrated by nm.	binutils	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Vulnerable	LIN1018-3393
1883	CVE-2018-20671	Medium	MEDIUM	load_specific_debug_section in objdump.c in GNU Binutils through 2.31.1 contains an integer overflow vulnerability that can trigger a heap-based buffer overflow via a crafted section size.	binutils	Unchanged	8.0.0.30	9.0.0.20	10.17.41.14	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3402
1884	CVE-2018-20669	High	HIGH	An issue where a provided address with access_ok() is not checked was discovered in i915_gem_execbuffer2_ioctl in drivers/gpu/drm/i915/i915_gem_execbuffer.c in the Linux kernel through 4.19.13. A local attacker can craft a malicious IOCTL function call to overwrite arbitrary kernel memory, resulting in a Denial of Service or privilege escalation.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-3763
1885	CVE-2018-20662	Medium	MEDIUM	In Poppler 0.72.0, PDFDoc::setup in PDFDoc.cc allows attackers to cause a denial-of-service (application crash caused by Object.h SIGABRT, because of a wrong return value from PDFDoc::setup) by crafting a PDF file in which an xref data structure is mishandled during extractPDFSubtype processing.	poppler	Unchanged	Won't Fix	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3409
1886	CVE-2018-20657	MEDIUM	HIGH	The demangle_template function in cplus-dem.c in GNU libiberty, as distributed in GNU Binutils 2.31.1, has a memory leak via a crafted string, leading to a denial of service (memory consumption), as demonstrated by cxxfilt, a related issue to CVE-2018-12698.	binutils	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3414
1887	CVE-2018-20651	MEDIUM	MEDIUM	A NULL pointer dereference was discovered in elf_link_add_object_symbols in elflink.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.31.1. This occurs for a crafted ET_DYN with no program headers. A specially crafted ELF file allows remote attackers to cause a denial of service, as demonstrated by ld.	binutils	Unchanged	Not vulnerable	Not vulnerable	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3347
1888	CVE-2018-20650	MEDIUM	MEDIUM	A reachable Object::dictLookup assertion in Poppler 0.72.0 allows attackers to cause a denial of service due to the lack of a check for the dict data type, as demonstrated by use of the FileSpec class (in FileSpec.cc) in pdfdetach.	poppler	Unchanged	Won't Fix	9.0.0.20	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3302
1889	CVE-2018-20623	MEDIUM	MEDIUM	In GNU Binutils 2.31.1, there is a use-after-free in the error function in elfcomm.c when called from the process_archive function in readelf.c via a crafted ELF file.	binutils	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	LIN1018-3324
1890	CVE-2018-20622	MEDIUM	MEDIUM	JasPer 2.0.14 has a memory leak in base/jas_malloc.c in libjasper.a when --output-format jp2 is used.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3311

	A	B	C	D	E	F	G	H	I	J	K	L	M
1891	CVE-2018-20584	MEDIUM	MEDIUM	JasPer 2.0.14 allows remote attackers to cause a denial of service (application hang) via an attempted conversion to the jp2 format, as demonstrated by 00 00 00 0c 6a 50 20 20 0d 0a 87 0a 00 00 00 14 66 74 79 70 6a 70 32 20 00 00 00 00 6a 70 32 20 00 00 00 2d 6a 70 32 68 00 00 00 16 69 68 64 72 00 00 00 20 00 00 00 20 00 03 07 07 00 00 00 00 00 0f 63 6f 6c 72 01 00 00 00 00 00 10 00 00 00 d8 6a 70 32 63 ff 4f ff 51 00 2f 00 00 00 08 00 20 00 00 00 20 00 00 00 00 00 00 00 00 00 00 00 00 00 20 00 00 00 20 00 00 00 00 00 00 00 00 00 03 07 01 01 07 01 01 07 01 01 ff 52 00 0c 00 00 00 01 01 00 04 04 00 01 ff 5c 00 04 40 40 ff 64 00 25 00 01 43 72 65 61 74 65 64 20 62 79 20 4f 70 65 6e 4a 50 45 47 20 76 65 72 73 69 6f 6e 20 32 2e 31 2e 30 ff 90 00 0a 00 00 00 00 60 00 01 ff 93 dc d7 00 18 80 0e 21 bf fc 2e ea b2 37 ce db f3 05 52 3f 43 2d 2b dd d7 64 e4 3d 67 ff 72 ab 35 2b f8 43 ca b3 5f ca d9 24 85 b4 59 5c 8d 25 fd 77 80 cb 78 1d 87 60 d6 f8 28 6e 8f 65 45 25 ea ff 5d bf 1a 71 13 10 a9 de e4 dd 6b 41 f7 38 dc 66 4f ff d9.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3328

1900	CVE-2018-20532	MEDIUM	MEDIUM	There is a NULL pointer dereference at ext/testcase.c (function testcase_read) in libsolvext.a in libsolv through 0.7.2 that will cause a denial of service.	libsolv	Unchanged	Not vulnerable	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3316
1901	CVE-2018-20511	LOW	MEDIUM	An issue was discovered in the Linux kernel before 4.18.11. The ipddp_ioctl function in drivers/net/appletalk/ipddp.c allows local users to obtain sensitive kernel address information by leveraging CAP_NET_ADMIN to read the ipddp_route dev and next fields via an SIOCFINDIPDDPRT ioctl call.	linux	Unchanged	8.0.0.29	9.0.0.20	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3292
1902	CVE-2018-20510	Low	MEDIUM	The print_binder_transaction_ilocked function in drivers/android/binder.c in the Linux kernel 4.14.90 allows local users to obtain sensitive address information by reading *from *code *flags lines in a debugfs file.	linux	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-4039
1903	CVE-2018-20509	Low	MEDIUM	The print_binder_ref_olocked function in drivers/android/binder.c in the Linux kernel 4.14.90 allows local users to obtain sensitive address information by reading ref *desc *node lines in a debugfs file.	linux	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-4040
1904	CVE-2018-20506	Medium	HIGH	SQLite before 3.25.3, when the FTS3 extension is enabled, encounters an integer overflow (and resultant buffer overflow) for FTS3 queries in a merge operation that occurs after crafted changes to FTS3 shadow tables, allowing remote attackers to execute arbitrary code by leveraging the ability to run arbitrary SQL statements (such as in certain WebSQL use cases). This is a different vulnerability than CVE-2018-20346.	sqlite	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3842
1905	CVE-2018-20505	Medium	HIGH	SQLite 3.25.2, when queries are run on a table with a malformed PRIMARY KEY, allows remote attackers to cause a denial of service (application crash) by leveraging the ability to run arbitrary SQL statements (such as in certain WebSQL use cases).	sqlite	Unchanged	Vulnerable	Vulnerable	Vulnerable	10.18.44.6	Not vulnerable	Not vulnerable	LIN1018-3843
1906	CVE-2018-20483	LOW	HIGH	set_file_metadata in xattr.c in GNU Wget before 1.20.1 stores a file's origin URL in the user.xdg.origin.url metadata attribute of the extended attributes of the downloaded file, which allows local users to obtain sensitive information (e.g., credentials contained in the URL) by reading this attribute, as demonstrated by getfattr. This also applies to Referer information in the user.xdg.referrer.url metadata attribute. According to 2016-07-22 in the Wget ChangeLog, user.xdg.origin.url was partially based on the behavior of fwrite_xattr in tool_xattr.c in curl.	wget	Unchanged	Not vulnerable	Not vulnerable	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3315
1907	CVE-2018-20482	LOW	MEDIUM	GNU Tar through 1.30, when --sparse is used, mishandles file shrinkage during read access, which allows local users to cause a denial of service (infinite read loop in sparse_dump_region in sparse.c) by modifying a file that is supposed to be archived by a different user's process (e.g., a system backup running as root).	tar	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3296
1908	CVE-2018-20481	MEDIUM	MEDIUM	XRef::getEntry in XRef.cc in Poppler 0.72.0 mishandles unallocated XRef entries, which allows remote attackers to cause a denial of service (NULL pointer dereference) via a crafted PDF document, when XRefEntry::setFlag in XRef.h is called from Parser::makeStream in Parser.cc.	poppler	Unchanged	Won't Fix	9.0.0.20	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3334
1909	CVE-2018-20467	MEDIUM	MEDIUM	In coders/bmp.c in ImageMagick before 7.0.8-16, an input file can result in an infinite loop and hang, with high CPU and memory consumption. Remote attackers could leverage this vulnerability to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.29	9.0.0.20	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3336

	A	B	C	D	E	F	G	H	I	J	K	L	M
1910	CVE-2018-20449	Low	MEDIUM	The hidma_chan_stats function in drivers/dma/qcom/hidma_dbg.c in the Linux kernel 4.14.90 allows local users to obtain sensitive address information by reading callback= lines in a debugfs file.	linux	Unchanged	Not vulnerable	9.0.0.22	10.17.41.17	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3850
1911	CVE-2018-20406	MEDIUM	HIGH	Modules/_pickle.c in Python before 3.7.1 has an integer overflow via a large LONG_BINPUT value that is mishandled during a resize to twice the size attempt. This issue might cause memory exhaustion, but is only relevant if the pickle format is used for serializing tens or hundreds of gigabytes of data.	python	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3298
1912	CVE-2018-20362	Medium	MEDIUM	A NULL pointer dereference was discovered in ifilter_bank of libfaad/filtbank.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.8.8. The vulnerability causes a segmentation fault and application crash because adding to windowed output is mishandled in the EIGHT_SHORT_SEQUENCE case.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3320
1913	CVE-2018-20361	Medium	MEDIUM	An invalid memory address dereference was discovered in the hf_assembly function of libfaad/sbr_hfadj.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.8.8. The vulnerability causes a segmentation fault and application crash, which leads to denial of service.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3314
1914	CVE-2018-20360	Medium	MEDIUM	An invalid memory address dereference was discovered in the sbr_process_channel function of libfaad/sbr_dec.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.8.8. The vulnerability causes a segmentation fault and application crash, which leads to denial of service.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3321
1915	CVE-2018-20359	Medium	MEDIUM	An invalid memory address dereference was discovered in the sbrDecodeSingleFramePS function of libfaad/sbr_dec.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.8.8. The vulnerability causes a segmentation fault and application crash, which leads to denial of service.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3319
1916	CVE-2018-20358	Medium	MEDIUM	An invalid memory address dereference was discovered in the lt_prediction function of libfaad/lt_predict.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.8.8. The vulnerability causes a segmentation fault and application crash, which leads to denial of service.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3327
1917	CVE-2018-20357	Medium	MEDIUM	A NULL pointer dereference was discovered in sbr_process_channel of libfaad/sbr_dec.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.8.8. The vulnerability causes a segmentation fault and application crash.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3343
1918	CVE-2018-20346	MEDIUM	HIGH	SQLite before 3.25.3, when the FTS3 extension is enabled, encounters an integer overflow (and resultant buffer overflow) for FTS3 queries that occur after crafted changes to FTS3 shadow tables, allowing remote attackers to execute arbitrary code by leveraging the ability to run arbitrary SQL statements (such as in certain WebSQL use cases), aka Magellan.	sqlite	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3299
1919	CVE-2018-20330	MEDIUM	HIGH	The tjLoadImage function in libjpeg-turbo 2.0.1 has an integer overflow with a resultant heap-based buffer overflow via a BMP image because multiplication of pitch and height is mishandled, as demonstrated by tjbench.	libjpeg-turbo	Unchanged	Won't Fix	Not vulnerable	Not vulnerable	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3310
1920	CVE-2018-20217	LOW	MEDIUM	A Reachable Assertion issue was discovered in the KDC in MIT Kerberos 5 (aka krb5) before 1.17. If an attacker can obtain a krbtgt ticket using an older encryption type (single-DES, triple-DES, or RC4), the attacker can crash the KDC by making an S4U2Self request.	krb5	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3491
1921	CVE-2018-20216	MEDIUM	HIGH	QEMU can have an infinite loop in hw/rdma/vmw/pvrdma_dev_ring.c because return values are not checked (and -1 is mishandled).	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.4	10.19.45.1	Not vulnerable	LIN1018-3323
1922	CVE-2018-20199	MEDIUM	MEDIUM	A NULL pointer dereference was discovered in ifilter_bank of libfaad/filtbank.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.8.8. The vulnerability causes a segmentation fault and application crash, which leads to denial of service because adding to windowed output is mishandled in the ONLY_LONG_SEQUENCE case.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3202
1923	CVE-2018-20198	MEDIUM	MEDIUM	A NULL pointer dereference was discovered in ifilter_bank of libfaad/filtbank.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.8.8. The vulnerability causes a segmentation fault and application crash, which leads to denial of service because adding to windowed output is mishandled in the LONG_START_SEQUENCE case.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3252
1924	CVE-2018-20197	MEDIUM	HIGH	There is a stack-based buffer underflow in the third instance of the calculate_gain function in libfaad/sbr_hfadj.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.8.8. A crafted input will lead to a denial of service or possibly unspecified other impact because limiting the additional noise energy level is mishandled for the G_max > G case.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3203
1925	CVE-2018-20196	MEDIUM	HIGH	There is a stack-based buffer overflow in the third instance of the calculate_gain function in libfaad/sbr_hfadj.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.8.8. A crafted input will lead to a denial of service or possibly unspecified other impact because the S_M array is mishandled.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3236
1926	CVE-2018-20195	MEDIUM	MEDIUM	A NULL pointer dereference was discovered in ic_predict of libfaad/ic_predict.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.8.8. The vulnerability causes a segmentation fault and application crash, which leads to denial of service.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3223

	A	B	C	D	E	F	G	H	I	J	K	L	M
1927	CVE-2018-20194	MEDIUM	HIGH	There is a stack-based buffer underflow in the third instance of the calculate_gain function in libfaad/sbr_hfadj.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.8.8. A crafted input will lead to a denial of service or possibly unspecified other impact because limiting the additional noise energy level is mishandled for the G_max <= G case.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3209
1928	CVE-2018-20191	MEDIUM	HIGH	hw/rdma/vmw/pvrdma_main.c in QEMU does not implement a read operation (such as uar_read by analogy to uar_write), which allows attackers to cause a denial of service (NULL pointer dereference).	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.4	10.19.45.1	Not vulnerable	LIN1018-3312
1929	CVE-2018-20169	HIGH	MEDIUM	An issue was discovered in the Linux kernel before 4.19.9. The USB subsystem mishandles size checks during the reading of an extra descriptor, related to __usb_get_extra_descriptor in drivers/usb/core/usb.c.	linux	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3227
1930	CVE-2018-20167	MEDIUM	HIGH	Terminology before 1.3.1 allows Remote Code Execution because popmedia is mishandled, as demonstrated by an unsafe cat README.md command when \e}pn is used. A popmedia control sequence can allow the malicious execution of executable file formats registered in the X desktop share MIME types (/usr/share/applications). The control sequence defers unknown file types to the handle_unknown_media() function, which executes xdg-open against the filename specified in the sequence. The use of xdg-open for all unknown file types allows executable file formats with a registered shared MIME type to be executed. An attacker can achieve remote code execution by introducing an executable file and a plain text file containing the control sequence through a fake software project (e.g., in Git or a tarball). When the control sequence is rendered (such as with cat), the executable file will be run.	terminology	Unchanged	Not vulnerable	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-7831
1931	CVE-2018-20145	MEDIUM	HIGH	Eclipse Mosquitto 1.5.x before 1.5.5 allows ACL bypass: if the option per_listener_settings was set to true, and the default listener was in use, and the default listener specified an acl_file, then the acl file was being ignored.	mosquitto	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	LIN1018-3204
1932	CVE-2018-20126	LOW	MEDIUM	hw/rdma/vmw/pvrdma_cmd.c in QEMU allows create_cq and create_qp memory leaks because errors are mishandled.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.4	10.19.45.1	Not vulnerable	LIN1018-3313
1933	CVE-2018-20125	MEDIUM	HIGH	hw/rdma/vmw/pvrdma_cmd.c in QEMU allows attackers to cause a denial of service (NULL pointer dereference or excessive memory allocation) in create_cq_ring or create_qp_rings.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.4	10.19.45.1	Not vulnerable	LIN1018-3346
1934	CVE-2018-20124	LOW	MEDIUM	hw/rdma/rdma_backend.c in QEMU allows guest OS users to trigger out-of-bounds access via a PvrdmaSqWqe ring element with a large num_sge value.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.4	10.19.45.1	Not vulnerable	LIN1018-3291
1935	CVE-2018-20123	LOW	MEDIUM	pvrdma_realize in hw/rdma/vmw/pvrdma_main.c in QEMU has a Memory leak after an initialisation error.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3233

This attack appear to be exploitable via network connectivity. This vulnerability appears to have been fixed in cced03dd667a5df6df8fd40d8de0bff477ee02e8 and later.	ffmpeg	Unchanged	Won't Fix	9.0.0.18	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4466
1951	CVE-2018-19985	LOW	MEDIUM	An issue was discovered in the Linux kernel. USB: hso: OOB memory access in hso_probe/hso_get_config_data	linux	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3322
1952	CVE-2018-19970	MEDIUM	MEDIUM	In phpMyAdmin before 4.8.4, an XSS vulnerability was found in the navigation tree, where an attacker can deliver a payload to a user through a crafted database/table name.	phpmyadmin	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3219
1953	CVE-2018-19969	MEDIUM	HIGH	phpMyAdmin 4.7.x and 4.8.x versions prior to 4.8.4 are affected by a series of CSRF flaws. By deceiving a user into clicking on a crafted URL, it is possible to perform harmful SQL operations such as renaming databases, creating new tables/routines, deleting designer pages, adding/deleting users, updating user passwords, killing SQL processes, etc.	phpmyadmin	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Vulnerable	LIN1018-3210
1954	CVE-2018-19968	MEDIUM	MEDIUM	An attacker can exploit phpMyAdmin before 4.8.4 to leak the contents of a local file because of an error in the transformation feature. The attacker must have access to the phpMyAdmin Configuration Storage tables, although these can easily be created in any database to which the attacker has access. An attacker must have valid credentials to log in to phpMyAdmin; this vulnerability does not allow an attacker to circumvent the login system.	phpmyadmin	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3205
1955	CVE-2018-19935	MEDIUM	HIGH	ext/imap/php_imap.c in PHP 5.x and 7.x before 7.3.0 allows remote attackers to cause a denial of service (NULL pointer dereference and application crash) via an empty string in the message argument to the imap_mail function.	php	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3255
1956	CVE-2018-19932	MEDIUM	MEDIUM	An issue was discovered in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils through 2.31. There is an integer overflow and infinite loop caused by the IS_CONTAINED_BY_LMA macro in elf.c.	binutils	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3260
1957	CVE-2018-19931	MEDIUM	HIGH	An issue was discovered in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils through 2.31. There is a heap-based buffer overflow in bfd_elf32_swap_phdr_in in elfcode.h because the number of program headers is not restricted.	binutils	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3239
1958	CVE-2018-19876	MEDIUM	MEDIUM	cairo 1.16.0, in cairo_ft_apply_variations() in cairo-ft-font.c, would free memory using a free function incompatible with WebKit's fastMalloc, leading to an application crash with a free(): invalid pointer error.	cairo	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3228
1959	CVE-2018-19857	MEDIUM	CRITICAL	The CAF demuxer in modules/demux/caf.c in VideoLAN VLC media player 3.0.4 may read memory from an uninitialized pointer when processing magic cookies in CAF files, because a ReadKukiChunk() cast converts a return value to an unsigned int even if that value is negative. This could result in a denial of service and/or a potential infoleak.	vlc	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3235

	A	B	C	D	E	F	G	H	I	J	K	L	M
1960	CVE-2018-19854	LOW	MEDIUM	An issue was discovered in the Linux kernel before 4.19.3. crypto_report_one() and related functions in crypto/crypto_user.c (the crypto user configuration API) do not fully initialize structures that are copied to userspace, potentially leaking sensitive memory to user programs. NOTE: this is a CVE-2013-2547 regression but with easier exploitability because the attacker does not need a capability (however, the system must have the CONFIG_CRYPTO_USER kconfig option).	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.14	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3216
1961	CVE-2018-19841	MEDIUM	MEDIUM	The function WavpackVerifySingleBlock in open_utils.c in libwavpack.a in WavPack through 5.1.0 allows attackers to cause a denial-of-service (out-of-bounds read and application crash) via a crafted WavPack Lossless Audio file, as demonstrated by wvunpack.	wavpack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3221
1962	CVE-2018-19840	MEDIUM	MEDIUM	The function WavpackPackInit in pack_utils.c in libwavpack.a in WavPack through 5.1.0 allows attackers to cause a denial-of-service (resource exhaustion caused by an infinite loop) via a crafted wav audio file because WavpackSetConfiguration64 mishandles a sample rate of zero.	wavpack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3217
1963	CVE-2018-19824	MEDIUM	HIGH	In the Linux kernel through 4.19.6, a local user could exploit a use-after-free in the ALSA driver by supplying a malicious USB Sound device (with zero interfaces) that is mishandled in usb_audio_probe in sound/usb/card.c.	linux	Unchanged	8.0.0.31	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3247
1964	CVE-2018-19788	HIGH	HIGH	A flaw was found in PolicyKit (aka polkit) 0.115 that allows a user with a uid greater than INT_MAX to successfully execute any systemctl command.	polkit	Unchanged	Investigate	Investigate	Investigate	Investigate	Not vulnerable	Not vulnerable	LIN1018-3195
1965	CVE-2018-19758	MEDIUM	MEDIUM	There is a heap-based buffer over-read at wav.c in wav_write_header in libsndfile 1.0.28 that will cause a denial of service.	libsndfile1	Unchanged	8.0.0.30	9.0.0.21	10.17.41.15	10.18.44.5	10.19.45.1	Not vulnerable	LIN1018-3237
1966	CVE-2018-19755	MEDIUM	MEDIUM	There is an illegal address access at asm/preproc.c (function: is_mmacro) in Netwide Assembler (NASM) 2.14rc16 that will cause a denial of service (out-of-bounds array access) because a certain conversion can result in a negative integer.	nasm	Unchanged	8.0.0.29	Investigate	10.17.41.14	10.18.44.3	10.19.45.1	Not vulnerable	LIN1018-3212
1967	CVE-2018-19665	LOW	MEDIUM	The Bluetooth subsystem in QEMU mishandles negative values for length variables, leading to memory corruption.	qemu	Unchanged	8.0.0.29	9.0.0.20	Investigate	10.18.44.3	Investigate	Investigate	LIN1018-3196
1968	CVE-2018-19664	MEDIUM	MEDIUM	libjpeg-turbo 2.0.1 has a heap-based buffer over-read in the put_pixel_rows function in wrbmp.c, as demonstrated by djpeg.	libjpeg-turbo	Unchanged	Won't Fix	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Vulnerable	LIN1018-3224
1969	CVE-2018-19662	Medium	MEDIUM	An issue was discovered in libsndfile 1.0.28. There is a buffer over-read in the function i2alaw_array in alaw.c that will lead to a denial of service.	libsndfile1	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	10.19.45.1	Not vulnerable	LIN1018-3258
1970	CVE-2018-19661	Medium	MEDIUM	An issue was discovered in libsndfile 1.0.28. There is a buffer over-read in the function i2ulaw_array in ulaw.c that will lead to a denial of service.	libsndfile1	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	10.19.45.1	Not vulnerable	LIN1018-3215
1971	CVE-2018-19628	MEDIUM	HIGH	In Wireshark 2.6.0 to 2.6.4, the ZigBee ZCL dissector could crash. This was addressed in epan/dissectors/packet-zbee-zcl-lighting.c by preventing a divide-by-zero error.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3225
1972	CVE-2018-19627	MEDIUM	MEDIUM	In Wireshark 2.6.0 to 2.6.4 and 2.4.0 to 2.4.10, the IxVeriWave file parser could crash. This was addressed in wiretap/vwr.c by adjusting a buffer boundary.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3253
1973	CVE-2018-19626	MEDIUM	MEDIUM	In Wireshark 2.6.0 to 2.6.4 and 2.4.0 to 2.4.10, the DCOM dissector could crash. This was addressed in epan/dissectors/packet-dcom.c by adding \0' termination.	wireshark	Unchanged	8.0.0.29	9.0.0.20	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3246
1974	CVE-2018-19625	MEDIUM	MEDIUM	In Wireshark 2.6.0 to 2.6.4 and 2.4.0 to 2.4.10, the dissection engine could crash. This was addressed in epan/tvbuff_composite.c by preventing a heap-based buffer over-read.	wireshark	Unchanged	8.0.0.29	9.0.0.20	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3207
1975	CVE-2018-19624	MEDIUM	MEDIUM	In Wireshark 2.6.0 to 2.6.4 and 2.4.0 to 2.4.10, the PVFS dissector could crash. This was addressed in epan/dissectors/packet-pvfs2.c by preventing a NULL pointer dereference.	wireshark	Unchanged	8.0.0.29	9.0.0.20	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3214
1976	CVE-2018-19623	MEDIUM	MEDIUM	In Wireshark 2.6.0 to 2.6.4 and 2.4.0 to 2.4.10, the LBMPDM dissector could crash. In addition, a remote attacker could write arbitrary data to any memory locations before the packet-scoped memory. This was addressed in epan/dissectors/packet-lbmpdm.c by disallowing certain negative values.	wireshark	Unchanged	8.0.0.29	9.0.0.20	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3220
1977	CVE-2018-19622	MEDIUM	MEDIUM	In Wireshark 2.6.0 to 2.6.4 and 2.4.0 to 2.4.10, the MMSE dissector could go into an infinite loop. This was addressed in epan/dissectors/packet-mmse.c by preventing length overflows.	wireshark	Unchanged	8.0.0.29	9.0.0.20	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3262
1978	CVE-2018-19608	LOW	MEDIUM	Arm Mbed TLS before 2.14.1, before 2.7.8, and before 2.1.17 allows a local unprivileged attacker to recover the plaintext of RSA decryption, which is used in RSA-without-(EC)DH(E) cipher suites.	mbedtls	Unchanged	8.0.0.29	9.0.0.20	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3229
1979	CVE-2018-19591	MEDIUM	HIGH	In the GNU C Library (aka glibc or libc6) through 2.28, attempting to resolve a crafted hostname via getaddrinfo() leads to the allocation of a socket descriptor that is not closed. This is related to the if_nametoindex() function.	glibc	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3250
1980	CVE-2018-19543	MEDIUM	HIGH	An issue was discovered in JasPer 2.0.14. There is a heap-based buffer over-read of size 8 in the function jp2_decode in libjasper/jp2/jp2_dec.c.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5070

	A	B	C	D	E	F	G	H	I	J	K	L	M
1985	CVE-2018-19519	MEDIUM	MEDIUM	In tcpdump 4.9.2, a stack-based buffer over-read exists in the print_prefix function of print-hncp.c via crafted packet data because of missing initialization.	tcpdump	Unchanged	Not vulnerable	Not vulnerable	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN10-5078
1986	CVE-2018-19518	HIGH	HIGH	University of Washington IMAP Toolkit 2007f on UNIX, as used in imap_open() in PHP and other products, launches an rsh command (by means of the imap_rimap function in c-client/imap4r1.c and the tcp_aopen function in osdep/unix/tcp_unix.c) without preventing argument injection, which might allow remote attackers to execute arbitrary OS commands if the IMAP server name is untrusted input (e.g., entered by a user of a web application) and if rsh has been replaced by a program with different argument semantics. For example, if rsh is a link to ssh (as seen on Debian and Ubuntu systems), then the attack can use an IMAP server name containing a -oProxyCommand argument.	php	Unchanged	8.0.0.29	9.0.0.20	10.17.41.13	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-5060
1987	CVE-2018-19517	MEDIUM	MEDIUM	An issue was discovered in sysstat 12.1.1. The remap_struct function in sa_common.c has an out-of-bounds read during a memset call, as demonstrated by sadf.	sysstat	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-5076
1988	CVE-2018-19492	MEDIUM	HIGH	An issue was discovered in cairo.trm in Gnuplot 5.2.5. This issue allows an attacker to conduct a buffer overflow with an arbitrary amount of data in the cairotrm_options function. This flaw is caused by a missing size check of an argument passed to the set font function. This issue occurs when the Gnuplot pngcairo terminal is used as a backend.	gnuplot	Unchanged	8.0.0.29	9.0.0.20	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5077
1989	CVE-2018-19491	MEDIUM	HIGH	An issue was discovered in post.trm in Gnuplot 5.2.5. This issue allows an attacker to conduct a buffer overflow with an arbitrary amount of data in the PS_options function. This flaw is caused by a missing size check of an argument passed to the set font function. This issue occurs when the Gnuplot postscript terminal is used as a backend.	gnuplot	Unchanged	8.0.0.29	9.0.0.20	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5064
1990	CVE-2018-19490	MEDIUM	HIGH	An issue was discovered in datafile.c in Gnuplot 5.2.5. This issue allows an attacker to conduct a heap-based buffer overflow with an arbitrary amount of data in df_generate_ascii_array_entry. To exploit this vulnerability, an attacker must pass an overlong string as the right bound of the range argument that is passed to the plot function.	gnuplot	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5075
1991	CVE-2018-19489	LOW	MEDIUM	A use-after-free flaw was found in the VirtFS, host directory sharing via Plan 9 File System(9pfs) support in QEMU. It could occur due to a race condition while renaming	qemu	Unchanged	8.0.0.29	9.0.0.20	10.17.41.13	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-5074
1992	CVE-2018-19486	HIGH	CRITICAL	Git before 2.19.2 on Linux and UNIX executes commands from the current working directory (as if '.' were at the end of $PATH) in certain cases involving the run_command() API and run-command.c, because there was a dangerous change from execvp to execv during 2017.	git	Unchanged	Not vulnerable	Not vulnerable	10.17.41.13	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-5068

2013	CVE-2018-19210	MEDIUM	MEDIUM	In LibTIFF 4.0.9, there is a NULL pointer dereference in the TIFFWriteDirectorySec function in tif_dirwrite.c that will lead to a denial of service attack, as demonstrated by tiffset.	tiff	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	Not vulnerable	Not vulnerable	LIN10-5014
2014	CVE-2018-19209	MEDIUM	MEDIUM	Netwide Assembler (NASM) 2.14rc15 has a NULL pointer dereference in the function find_label in asm/labels.c that will lead to a DoS attack.	nasm	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-5000
2015	CVE-2018-19191	Low	MEDIUM	Webmin 1.890 has XSS via /config.cgi? webmin, the /shell/index.cgi history parameter, /shell/index.cgi?stripped=1, or the /webminlog/search.cgi uall or mall parameter.	webmin	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3791
2016	CVE-2018-19149	MEDIUM	MEDIUM	Poppler before 0.70.0 has a NULL pointer dereference in _poppler_attachment_new when called from poppler_annot_file_attachment_get_attachment.	poppler	Unchanged	Won't Fix	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5009
2017	CVE-2018-19139	MEDIUM	MEDIUM	An issue has been found in JasPer 2.0.14. There is a memory leak in jas_malloc.c when called from jpc_unk_getparms in jpc_cs.c.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5017
2018	CVE-2018-19134	MEDIUM	HIGH	In Artifex Ghostscript through 9.25, the setpattern operator did not properly validate certain types. A specially crafted PostScript document could exploit this to crash Ghostscript or, possibly, execute arbitrary code in the context of the Ghostscript process. This is a type confusion issue because of failure to check whether the Implementation of a pattern dictionary was a structure type.	ghostscript	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3318
2019	CVE-2018-19132	MEDIUM	MEDIUM	Squid before 4.4, when SNMP is enabled, allows a denial of service (Memory Leak) via an SNMP packet.	squid	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4989
2020	CVE-2018-19131	MEDIUM	MEDIUM	Squid before 4.4 has XSS via a crafted X.509 certificate during HTTP(S) error page generation for certificate errors.	squid	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5021
2021	CVE-2018-19130	MEDIUM	MEDIUM	In Libav 12.3, there is an invalid memory access in vc1_decode_frame in libavcodec/vc1dec.c that allows attackers to cause a denial-of-service via a crafted aac file.	libav	Unchanged	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-10061
2022	CVE-2018-19129	MEDIUM	MEDIUM	In Libav 12.3, a NULL pointer dereference (RIP points to zero) issue in ff_mpa_synth_filter_float in libavcodec/mpegaudiodsp_template.c can cause a segmentation fault (application crash) via a crafted mov file.	libav	Unchanged	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-10075
2023	CVE-2018-19128	MEDIUM	MEDIUM	In Libav 12.3, there is a heap-based buffer over-read in decode_frame in libavcodec/lcldec.c that allows an attacker to cause denial-of-service via a crafted avi file.	libav	Unchanged	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-10057
2024	CVE-2018-19115	HIGH	CRITICAL	keepalived before 2.0.7 has a heap-based buffer overflow when parsing HTTP status codes resulting in DoS or possibly unspecified other impact, because extract_status_code in lib/html.c has no validation of the status code and instead writes an unlimited amount of data to the heap.	keepalived	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5005
2025	CVE-2018-19060	MEDIUM	MEDIUM	An issue was discovered in Poppler 0.71.0. There is a NULL pointer dereference in goo/GooString.h, will lead to denial of service, as demonstrated by utils/pdfdetach.cc not validating a filename of an embedded file before constructing a save path.	poppler	Unchanged	Won't Fix	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4999
2026	CVE-2018-19059	MEDIUM	MEDIUM	An issue was discovered in Poppler 0.71.0. There is a out-of-bounds read in EmbFile::save2 in FileSpec.cc, will lead to denial of service, as demonstrated by utils/pdfdetach.cc not validating embedded files before save attempts.	poppler	Unchanged	Won't Fix	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4987
2027	CVE-2018-19058	MEDIUM	MEDIUM	An issue was discovered in Poppler 0.71.0. There is a reachable abort in Object.h, will lead to denial of service because EmbFile::save2 in FileSpec.cc lacks a stream check before saving an embedded file.	poppler	Unchanged	Won't Fix	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5003
2028	CVE-2018-19052	MEDIUM	HIGH	An issue was discovered in mod_alias_physical_handler in mod_alias.c in lighttpd before 1.4.50. There is potential ../ path traversal of a single directory above an alias target, with a specific mod_alias configuration where the matched alias lacks a trailing '/' character, but the alias target filesystem path does have a trailing '/' character.	lighttpd	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-5011

	A	B	C	D	E	F	G	H	I	J	K	L	M
2029	CVE-2018-19046	LOW	MEDIUM	keepalived 2.0.8 didn't check for existing plain files when writing data to a temporary file upon a call to PrintData or PrintStats. If a local attacker had previously created a file with the expected name (e.g., /tmp/keepalived.data or /tmp/keepalived.stats), with read access for the attacker and write access for the keepalived process, then this potentially leaked sensitive information.	keepalived	Unchanged	Not vulnerable	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4996
2030	CVE-2018-19045	MEDIUM	HIGH	keepalived 2.0.8 used mode 0666 when creating new temporary files upon a call to PrintData or PrintStats, potentially leaking sensitive information.	keepalived	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5018
2031	CVE-2018-19044	LOW	MEDIUM	keepalived 2.0.8 didn't check for pathnames with symlinks when writing data to a temporary file upon a call to PrintData or PrintStats. This allowed local users to overwrite arbitrary files if fs.protected_symlinks is set to 0, as demonstrated by a symlink from /tmp/keepalived.data or /tmp/keepalived.stats to /etc/passwd.	keepalived	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5012
2032	CVE-2018-18956	MEDIUM	HIGH	The ProcessMimeEntity function in util-decode-mime.c in Suricata 4.x before 4.0.6 allows remote attackers to cause a denial of service (segfault and daemon crash) via crafted input to the SMTP parser, as exploited in the wild in November 2018.	suricata	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4985
2033	CVE-2018-18955	MEDIUM	HIGH	userns: also map extents in the reverse map to kernel IDs	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4988
2034	CVE-2018-18954	LOW	MEDIUM	An OOB r/w buffer access issue was found in the PowerPC PowerNV LPC controller in 'pnv_lpc_do_eccb' routine. It could occur while performing a memory write operation. A guest user/process could use this flaw to crash the QEMU process resulting in DoS.	qemu	Unchanged	Not vulnerable	Not vulnerable	10.17.41.13	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4994
2035	CVE-2018-18897	MEDIUM	MEDIUM	An issue was discovered in Poppler 0.71.0. There is a memory leak in GfxColorSpace::setDisplayProfile in GfxState.cc, as demonstrated by pdftocairo.	poppler	Unchanged	Won't Fix	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4986
2036	CVE-2018-18873	MEDIUM	HIGH	An issue was discovered in JasPer 2.0.14. There is a NULL pointer dereference in the function ras_putdatastd in ras/ras_enc.c.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5006
2037	CVE-2018-18849	LOW	MEDIUM	An out of bounds memory access issue was found in the LSI53C895A SCSI Host Bus Adapter emulation while writing a message in lsi_do_msgin. It could occur during migration if the 'msg_len' field has an invalid value. A user/process could use this flaw to crash the Qemu process resulting in DoS.	qemu	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4983
2038	CVE-2018-18839	MEDIUM	MEDIUM	** DISPUTED ** An issue was discovered in Netdata 1.10.0. Full Path Disclosure (FPD) exists via api/v1/alarms. NOTE: the vendor says is intentional.	netdata	Unchanged	Not vulnerable	9.0.0.22	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1019-1553
2039	CVE-2018-18838	Medium	HIGH	An issue was discovered in Netdata 1.10.0. Log Injection (or Log Forgery) exists via a %0a sequence in the url parameter to api/v1/registry.	netdata	Unchanged	Not vulnerable	9.0.0.22	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4308
2040	CVE-2018-18837	Medium	MEDIUM	An issue was discovered in Netdata 1.10.0. HTTP Header Injection exists via the api/v1/data filename parameter because of web_client_api_request_v1_data in web/api/web_api_v1.c.	netdata	Unchanged	Not vulnerable	9.0.0.22	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4307
2041	CVE-2018-18836	Medium	MEDIUM	An issue was discovered in Netdata 1.10.0. JSON injection exists via the api/v1/data tqx parameter because of web_client_api_request_v1_data in web/api/web_api_v1.c.	netdata	Unchanged	Not vulnerable	9.0.0.22	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4306
2042	CVE-2018-18829	MEDIUM	MEDIUM	There exists a NULL pointer dereference in ff_vc1_parse_frame_header_adv in vc1.c in Libav 12.3, which allows attackers to cause a denial-of-service through a crafted aac file.	libav	Unchanged	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-10020
2043	CVE-2018-18828	MEDIUM	MEDIUM	There exists a heap-based buffer overflow in vc1_decode_i_block_adv in vc1_block.c in Libav 12.3, which allows attackers to cause a denial-of-service via a crafted aac file.	libav	Unchanged	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9968
2044	CVE-2018-18827	MEDIUM	MEDIUM	There exists a heap-based buffer over-read in ff_vc1_pred_dc in vc1_block.c in Libav 12.3, which allows attackers to cause a denial-of-service via a crafted aac file.	libav	Unchanged	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9940
2045	CVE-2018-18826	MEDIUM	MEDIUM	There exists a heap-based buffer overflow in vc1_decode_p_mb_intfi in vc1_block.c in Libav 12.3, which allows attackers to cause a denial-of-service via a crafted aac file.	libav	Unchanged	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9962
2046	CVE-2018-18751	HIGH	CRITICAL	An issue was discovered in GNU gettext 0.19.8. There is a double free in default_add_message in read-catalog.c, related to an invalid free in po_gram_parse in po-gram-gen.y, as demonstrated by lt-msgfmt.	gettext	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.2	Not vulnerable	Not vulnerable	LIN10-4930
2047	CVE-2018-18718	MEDIUM	HIGH	An issue was discovered in gThumb through 3.6.2. There is a double-free vulnerability in the add_themes_from_dir method in dlg-contact-sheet.c because of two successive calls of g_free, each of which frees the same buffer.	gthumb	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-7687
2048	CVE-2018-18710	LOW	MEDIUM	An issue was discovered in the Linux kernel through 4.19. An information leak in cdrom_ioctl_select_disc in drivers/cdrom/cdrom.c could be used by local attackers to read kernel memory because a cast from unsigned long to int interferes with bounds checking. This is similar to CVE-2018-10940 and CVE-2018-16658.	linux	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4941
2049	CVE-2018-18701	MEDIUM	MEDIUM	An issue was discovered in cp-demangle.c in GNU libiberty, as distributed in GNU Binutils 2.31. There is a stack consumption vulnerability resulting from infinite recursion in the functions next_is_type_qual() and cplus_demangle_type() in cp-demangle.c. Remote attackers could leverage this vulnerability to cause a denial-of-service via an ELF file, as demonstrated by nm.	binutils	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4909
2050	CVE-2018-18700	MEDIUM	MEDIUM	An issue was discovered in cp-demangle.c in GNU libiberty, as distributed in GNU Binutils 2.31. There is a stack consumption vulnerability resulting from infinite recursion in the functions d_name(), d_encoding(), and d_local_name() in cp-demangle.c. Remote attackers could leverage this vulnerability to cause a denial-of-service via an ELF file, as demonstrated by nm.	binutils	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4912

	A	B	C	D	E	F	G	H	I	J	K	L	M
2051	CVE-2018-18690	MEDIUM	MEDIUM	In the Linux kernel before 4.17, a local attacker able to set attributes on an xfs filesystem could make this filesystem non-operational until the next mount by triggering an unchecked error condition during an xfs attribute change, because xfs_attr_shortform_addname in fs/xfs/libxfs/xfs_attr.c mishandles ATTR_REPLACE operations with conversion of an attr from short to long form.	linux	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4933
2052	CVE-2018-18661	MEDIUM	MEDIUM	An issue was discovered in LibTIFF 4.0.9. There is a NULL pointer dereference in the function LZWDecode in the file tif_lzw.c.	tiff	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4891
2053	CVE-2018-18653	HIGH	HIGH	The Linux kernel, as used in Ubuntu 18.10 and when booted with UEFI Secure Boot enabled, allows privileged local users to bypass intended Secure Boot restrictions and execute untrusted code by loading arbitrary kernel modules. This occurs because a modified kernel/module.c, in conjunction with certain configuration options, leads to mishandling of the result of signature verification.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4938
2054	CVE-2018-18607	MEDIUM	MEDIUM	An issue was discovered in elf_link_input_bfd in elflink.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.31. There is a NULL pointer dereference in elf_link_input_bfd when used for finding STT_TLS symbols without any TLS section. A specially crafted ELF allows remote attackers to cause a denial of service, as demonstrated by ld.	binutils	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4904
2055	CVE-2018-18606	MEDIUM	MEDIUM	An issue was discovered in the merge_strings function in merge.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.31. There is a NULL pointer dereference in _bfd_add_merge_section when attempting to merge sections with large alignments. A specially crafted ELF allows remote attackers to cause a denial of service, as demonstrated by ld.	binutils	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4871
2056	CVE-2018-18605	MEDIUM	MEDIUM	A heap-based buffer over-read issue was discovered in the function sec_merge_hash_lookup in merge.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.31, because _bfd_add_merge_section mishandles section merges when size is not a multiple of entsize. A specially crafted ELF allows remote attackers to cause a denial of service, as demonstrated by ld.	binutils	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4875
2057	CVE-2018-18585	MEDIUM	MEDIUM	chmd_read_headers in mspack/chmd.c in libmspack before 0.8alpha accepts a filename that has \0' as its first or second character (such as the /\0 name).	libmspack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4929
2058	CVE-2018-18584	MEDIUM	MEDIUM	In mspack/cab.h in libmspack before 0.8alpha and cabextract before 1.8, the CAB block input buffer is one byte too small for the maximal Quantum block, leading to an out-of-bounds write.	libmspack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4888
2059	CVE-2018-18559	MEDIUM	HIGH	In the Linux kernel through 4.19, a use-after-free can occur due to a race condition between fanout_add from setsockopt and bind on an AF_PACKET socket. This issue exists because of the 15fe076edea787807a7cdc168df832544b58eba6 incomplete fix for a race condition. The code mishandles a certain multithreaded case involving a packet_do_bind unregister action followed by a packet_notifier register action. Later, packet_release operates on only one of the two applicable linked lists. The attacker can achieve Program Counter control.	linux	Unchanged	8.0.0.29	9.0.0.20	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4922
2060	CVE-2018-18557	MEDIUM	HIGH	LibTIFF 4.0.9 (with JBIG enabled) decodes arbitrarily-sized JBIG into a buffer, ignoring the buffer size, which leads to a tif_jbig.c JBIGDecode out-of-bounds write.	tiff	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4918
2061	CVE-2018-18544	MEDIUM	MEDIUM	There is a memory leak in the function WriteMSLImage of coders/msl.c in ImageMagick 7.0.8-13 Q16.	imagemagick	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4937
2062	CVE-2018-18521	MEDIUM	MEDIUM	Divide-by-zero vulnerabilities in the function arlib_add_symbols() in arlib.c in elfutils 0.174 allow remote attackers to cause a denial of service (application crash) with a crafted ELF file, as demonstrated by eu-ranlib, because a zero sh_entsize is mishandled.	elfutils	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.4	Not vulnerable	Not vulnerable	LIN10-4882
2063	CVE-2018-18520	MEDIUM	MEDIUM	An Invalid Memory Address Dereference exists in the function elf_end in libelf in elfutils through v0.174. Although eu-size is intended to support ar files inside ar files, handle_ar in size.c closes the outer ar file before handling all inner entries. The vulnerability allows attackers to cause a denial of service (application crash) with a crafted ELF file.	elfutils	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.4	Not vulnerable	Not vulnerable	LIN10-4873
2064	CVE-2018-18484	MEDIUM	MEDIUM	An issue was discovered in cp-demangle.c in GNU libiberty, as distributed in GNU Binutils 2.31. Stack Exhaustion occurs in the C++ demangling functions provided by libiberty, and there is a stack consumption problem caused by recursive stack frames: cplus_demangle_type, d_bare_function_type, d_function_type.	binutils	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4892
2065	CVE-2018-18483	MEDIUM	HIGH	The get_count function in cplus-dem.c in GNU libiberty, as distributed in GNU Binutils 2.31, allows remote attackers to cause a denial of service (malloc called with the result of an integer-overflowing calculation) or possibly have unspecified other impact via a crafted string, as demonstrated by c++filt.	binutils	Unchanged	8.0.0.28	9.0.0.19	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4896
2066	CVE-2018-18445	HIGH	HIGH	In the Linux kernel 4.14.x, 4.15.x, 4.16.x, 4.17.x, and 4.18.x before 4.18.13, faulty computation of numeric bounds in the BPF verifier permits out-of-bounds memory accesses because adjust_scalar_min_max_vals in kernel/bpf/verifier.c mishandles 32-bit right shifts.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4928
2067	CVE-2018-18440	HIGH	HIGH	DENX U-Boot through 2018.09-rc1 has a locally exploitable buffer overflow via a crafted kernel image because filesystem loading is mishandled.	u-boot	Unchanged	Vulnerable	Not vulnerable	Not vulnerable	10.18.44.4	10.19.45.1	Not vulnerable	LIN10-5048

	A	B	C	D	E	F	G	H	I	J	K	L	M
2068	CVE-2018-18439	HIGH	CRITICAL	DENX U-Boot through 2018.09-rc1 has a remotely exploitable buffer overflow via a malicious TFTP server because TFTP traffic is mishandled. Also, local exploitation can occur via a crafted kernel image.	u-boot	Unchanged	Vulnerable	Not vulnerable	Not vulnerable	10.18.44.4	10.19.45.1	Not vulnerable	LIN10-5049
2069	CVE-2018-18438	LOW	MEDIUM	Qemu has integer overflows because IORead Handler and its associated functions use a signed integer data type for a size value.	qemu	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Vulnerable	LIN10-4913
2070	CVE-2018-18408	HIGH	CRITICAL	A use-after-free was discovered in the tcpbridge binary of Tcpreplay 4.3.0 beta1. The issue gets triggered in the function post_args() at tcpbridge.c, causing a denial of service or possibly unspecified other impact.	tcpreplay	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4915
2071	CVE-2018-18407	MEDIUM	MEDIUM	A heap-based buffer over-read was discovered in the tcpreplay-edit binary of Tcpreplay 4.3.0 beta1, during the incremental checksum operation. The issue gets triggered in the function csum_replace4() in incremental_checksum.h, causing a denial of service.	tcpreplay	Unchanged	Not vulnerable	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4910
2072	CVE-2018-18398	LOW	MEDIUM	Xfce Thunar 1.6.15, when Xfce 4.12 is used, mishandles the IBus-Unikey input method for file searches within File Manager, leading to an out-of-bounds read and SEGV. This could potentially be exploited by an arbitrary local user who creates files in /tmp before the victim uses this input method.	thunar	Unchanged	Vulnerable	Vulnerable	Vulnerable	Investigate	Not vulnerable	Not vulnerable	LIN10-4894
2073	CVE-2018-18397	LOW	MEDIUM	The userfaultfd implementation in the Linux kernel before 4.19.7 mishandles access control for certain UFFDIO_ioctl calls, as demonstrated by allowing local users to write data into holes in a tmpfs file (if the user has read-only access to that file, and that file contains holes), related to fs/userfaultfd.c and mm/userfaultfd.c.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.14	10.18.44.3	Not vulnerable	Vulnerable	LIN1018-3240
2074	CVE-2018-18386	LOW	LOW	drivers/tty/n_tty.c in the Linux kernel before 4.14.11 allows local attackers (who are able to access pseudo terminals) to hang/block further usage of any pseudo terminal devices due to an EXTPROC versus ICANON confusion in TIOCINQ.	linux	Unchanged	8.0.0.28	9.0.0.19	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4859
2075	CVE-2018-18384	MEDIUM	MEDIUM	Info-ZIP UnZip 6.0 has a buffer overflow in list.c, when a ZIP archive has a crafted relationship between the compressed-size value and the uncompressed-size value, because a buffer size is 10 and is supposed to be 12.	unzip	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	10.19.45.1	Not vulnerable	LIN10-4925
2076	CVE-2018-18314	HIGH	CRITICAL	Perl before 5.26.3 has a buffer overflow via a crafted regular expression that triggers invalid write operations.	perl	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3232
2077	CVE-2018-18313	MEDIUM	CRITICAL	Perl before 5.26.3 has a buffer over-read via a crafted regular expression that triggers disclosure of sensitive information from process memory.	perl	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3248
2078	CVE-2018-18312	HIGH	CRITICAL	Perl before 5.26.3 and 5.28.0 before 5.28.1 has a buffer overflow via a crafted regular expression that triggers invalid write operations.	perl	Unchanged	Not vulnerable	Not vulnerable	10.17.41.15	10.18.44.5	Not vulnerable	Vulnerable	LIN1018-3206
2079	CVE-2018-18311	HIGH	CRITICAL	Perl before 5.26.3 and 5.28.x before 5.28.1 has a buffer overflow via a crafted regular expression that triggers invalid write operations.	perl	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3251
2080	CVE-2018-18310	MEDIUM	MEDIUM	An invalid memory address dereference was discovered in dwfl_segment_report_module.c in libdwfl in elfutils through v0.174. The vulnerability allows attackers to cause a denial of service (application crash) with a crafted ELF file, as demonstrated by consider_notes.	elfutils	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.4	Not vulnerable	Not vulnerable	LIN10-4860
2081	CVE-2018-18309	MEDIUM	MEDIUM	An issue was discovered in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.31. An invalid memory address dereference was discovered in read_reloc in reloc.c. The vulnerability causes a segmentation fault and application crash, which leads to denial of service, as demonstrated by objdump, because of missing _bfd_clear_contents bounds checking.	binutils	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4927
2082	CVE-2018-18284	HIGH	CRITICAL	Artifex Ghostscript 9.25 and earlier allows attackers to bypass a sandbox protection mechanism via vectors involving the 1Policy operator.	ghostscript	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.4	Not vulnerable	Not vulnerable	LIN10-4920
2083	CVE-2018-18281	MEDIUM	HIGH	Since Linux kernel version 3.2, the mremap() syscall performs TLB flushes after dropping pagetable locks. If a syscall such as ftruncate() removes entries from the pagetables of a task that is in the middle of mremap(), a stale TLB entry can remain for a short time that permits access to a physical page after it has been released back to the page allocator and reused. This is fixed in the following kernel versions: 4.9.135, 4.14.78, 4.18.16, 4.19.	linux	Unchanged	8.0.0.28	9.0.0.20	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4893
2084	CVE-2018-18245	LOW	MEDIUM	Nagios Core 4.4.2 has XSS via the alert summary reports of plugin results, as demonstrated by a SCRIPT element delivered by a modified check_load plugin to NRPE.	nagios-core	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	10.18.44.5	Not vulnerable	Vulnerable	LIN1018-3211
2085	CVE-2018-18227	MEDIUM	HIGH	In Wireshark 2.6.0 to 2.6.3 and 2.4.0 to 2.4.9, the MS-WSP protocol dissector could crash. This was addressed in epan/dissectors/packet-mswsp.c by properly handling NULL return values.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4818
2086	CVE-2018-18226	HIGH	HIGH	In Wireshark 2.6.0 to 2.6.3, the Steam IHS Discovery dissector could consume system memory. This was addressed in epan/dissectors/packet-steam-ihs-discovery.c by changing the memory-management approach.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4819
2087	CVE-2018-18225	MEDIUM	HIGH	In Wireshark 2.6.0 to 2.6.3, the CoAP dissector could crash. This was addressed in epan/dissectors/packet-coap.c by ensuring that the piv length is correctly computed.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4822
2088	CVE-2018-18088	MEDIUM	MEDIUM	OpenJPEG 2.3.0 has a NULL pointer dereference for red in the imagetopnm function of jp2/convert.c	openjpeg	Unchanged	Won't Fix	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4781
2089	CVE-2018-18074	MEDIUM	CRITICAL	The Requests package through 2.19.1 before 2018-09-14 for Python sends an HTTP Authorization header to an http URI upon receiving a same-hostname https-to-http redirect, which makes it easier for remote attackers to discover credentials by sniffing the network.	python-requests	Unchanged	8.0.0.28	9.0.0.18	10.17.41.13	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4780
2090	CVE-2018-18073	MEDIUM	MEDIUM	Artifex Ghostscript allows attackers to bypass a sandbox protection mechanism by leveraging exposure of system operators in the saved execution stack in an error object.	ghostscript	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.4	Not vulnerable	Not vulnerable	LIN10-4886

	A	B	C	D	E	F	G	H	I	J	K	L	M
2091	CVE-2018-18066	MEDIUM	HIGH	snmp_oid_compare in snmplib/snmp_api.c in Net-SNMP before 5.8 has a NULL Pointer Exception bug that can be used by an unauthenticated attacker to remotely cause the instance to crash via a crafted UDP packet, resulting in Denial of Service.	net-snmp	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4804
2092	CVE-2018-18065	MEDIUM	MEDIUM	_set_key in agent/helpers/table_container.c in Net-SNMP before 5.8 has a NULL Pointer Exception bug that can be used by an authenticated attacker to remotely cause the instance to crash via a crafted UDP packet, resulting in Denial of Service.	net-snmp	Unchanged	8.0.0.28	9.0.0.18	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4791
2093	CVE-2018-18064	MEDIUM	MEDIUM	cairo through 1.15.14 has an out-of-bounds stack-memory write during processing of a crafted document by WebKitGTK+ because of the interaction between cairo-rectangular-scan-converter.c (the generate and render_rows functions) and cairo-image-compositor.c (the _cairo_image_spans_and_zero function).	cairo	Unchanged	Vulnerable	Vulnerable	Vulnerable	Investigate	Investigate	Investigate	LIN10-4814
2094	CVE-2018-18025	MEDIUM	MEDIUM	In ImageMagick 7.0.8-13 Q16, there is a heap-based buffer over-read in the EncodeImage function of coders/pict.c, which allows attackers to cause a denial of service via a crafted SVG image file.	imagemagick	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4798
2095	CVE-2018-18024	MEDIUM	MEDIUM	In ImageMagick 7.0.8-13 Q16, there is an infinite loop in the ReadBMPImage function of the coders/bmp.c file. Remote attackers could leverage this vulnerability to cause a denial of service via a crafted bmp file.	imagemagick	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4810
2096	CVE-2018-18023	MEDIUM	MEDIUM	In ImageMagick 7.0.8-13 Q16, there is a heap-based buffer over-read in the SVGStripString function of coders/svg.c, which allows attackers to cause a denial of service via a crafted SVG image file.	imagemagick	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4802
2097	CVE-2018-18021	LOW	HIGH	arch/arm64/kvm/guest.c in KVM in the Linux kernel before 4.18.12 on the arm64 platform mishandles the KVM_SET_ON_REG ioctl. This is exploitable by attackers who can create virtual machines. An attacker can arbitrarily redirect the hypervisor flow of control (with full register control). An attacker can also cause a denial of service (hypervisor panic) via an illegal exception return. This occurs because of insufficient restrictions on userspace access to the core register file, and because PSTATE.M validation does not prevent unintended execution modes.	linux	Unchanged	8.0.0.29	9.0.0.20	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4796
2098	CVE-2018-18016	MEDIUM	MEDIUM	ImageMagick 7.0.7-28 has a memory leak vulnerability in WritePCXImage in coders/pcx.c.	imagemagick	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4809
2099	CVE-2018-17985	MEDIUM	MEDIUM	An issue was discovered in cp-demangle.c in GNU libiberty, as distributed in GNU Binutils 2.31. There is a stack consumption problem caused by the cplus_demangle_type function making recursive calls to itself in certain scenarios involving many 'P' characters.	binutils	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4808
2100	CVE-2018-17983	MEDIUM	CRITICAL	cext/manifest.c in Mercurial before 4.7.2 has an out-of-bounds read during parsing of a malformed manifest entry.	mercurial	Unchanged	8.0.0.28	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4813
2101	CVE-2018-17977	MEDIUM	MEDIUM	The Linux kernel 4.14.67 mishandles certain interaction among XFRM Netlink messages, IPPROTO_AH packets, and IPPROTO_IP packets, which allows local users to cause a denial of service (memory consumption and system hang) by leveraging root access to execute crafted applications, as demonstrated on CentOS 7.	linux	Unchanged	Vulnerable	Vulnerable	Vulnerable	Investigate	Not vulnerable	Not vulnerable	LIN10-4795
2102	CVE-2018-17974	MEDIUM	MEDIUM	An issue was discovered in Tcpreplay 4.3.0 beta1. A heap-based buffer over-read was triggered in the function dlt_en10mb_encode() of the file plugins/dlt_en10mb/en10mb.c, due to inappropriate values in the function memmove(). The length (pktlen + ctx -> l2len) can be larger than source value (packet + ctx->l2len) because the function fails to ensure the length of a packet is valid. This leads to Denial of Service.	tcpreplay	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4805
2103	CVE-2018-17972	MEDIUM	MEDIUM	An issue was discovered in the proc_pid_stack function in fs/proc/base.c in the Linux kernel through 4.18.11. It does not ensure that only root may inspect the kernel stack of an arbitrary task, allowing a local attacker to exploit racy stack unwinding and leak kernel task stack contents.	linux	Unchanged	8.0.0.30	9.0.0.20	10.17.41.14	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4807
2104	CVE-2018-17967	MEDIUM	MEDIUM	ImageMagick 7.0.7-28 has a memory leak vulnerability in ReadBGRImage in coders/bgr.c.	imagemagick	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4787

2106	CVE-2018-17965	MEDIUM	MEDIUM	ImageMagick 7.0.7-28 has a memory leak vulnerability in WriteSGIImage in coders/sgi.c.	imagemagick	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4815
2107	CVE-2018-17963	HIGH	CRITICAL	qemu_deliver_packet_iov in net/net.c in Qemu accepts packet sizes greater than INT_MAX, which allows attackers to cause a denial of service or possibly have unspecified other impact.	qemu	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4820
2108	CVE-2018-17962	MEDIUM	HIGH	Qemu has a Buffer Overflow in pcnet_receive in hw/net/pcnet.c because an incorrect integer data type is used.	qemu	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4817
2109	CVE-2018-17961	MEDIUM	HIGH	Artifex Ghostscript 9.25 and earlier allows attackers to bypass a sandbox protection mechanism via vectors involving errorhandler setup. NOTE: this issue exists because of an incomplete fix for CVE-2018-17183.	ghostscript	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.4	Not vulnerable	Not vulnerable	LIN10-4864
2110	CVE-2018-17958	MEDIUM	HIGH	Qemu has a Buffer Overflow in rtl8139_do_receive in hw/net/rtl8139.c because an incorrect integer data type is used.	qemu	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4783
2111	CVE-2018-17953	HIGH	HIGH	A incorrect variable in a SUSE specific patch for pam_access rule matching in PAM 1.3.0 in openSUSE Leap 15.0 and SUSE Linux Enterprise 15 could lead to pam_access rules not being applied (fail open).	pam	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3263
2112	CVE-2018-17942	MEDIUM	HIGH	The convert_to_decimal function in vasnprintf.c in Gnulib before 2018-09-23 has a heap-based buffer overflow because memory is not allocated for a trailing '\0' character during %f processing.	gnulib	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4788

	A	B	C	D	E	F	G	H	I	J	K	L	M
2113	CVE-2018-17937	Medium	HIGH	gpsd versions 2.90 to 3.17 and microjson versions 1.0 to 1.3, an open source project, allow a stack-based buffer overflow, which may allow remote attackers to execute arbitrary code on embedded platforms via traffic on Port 2947/TCP or crafted JSON inputs.	gpsd	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3798
2114	CVE-2018-17795	MEDIUM	HIGH	The function t2p_write_pdf in tiff2pdf.c in LibTIFF 4.0.9 allows remote attackers to cause a denial of service (heap-based buffer overflow and application crash) or possibly have unspecified other impact via a crafted TIFF file, a similar issue to CVE-2017-9935.	tiff	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.2	Not vulnerable	Not vulnerable	LIN10-4816
2115	CVE-2018-17794	MEDIUM	MEDIUM	An issue was discovered in cplus-dem.c in GNU libiberty, as distributed in GNU Binutils 2.31. There is a NULL pointer dereference in work_stuff_copy_to_from when called from iterate_demangle_function.	binutils	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4803
2116	CVE-2018-17582	MEDIUM	HIGH	Tcpreplay v4.3.0 beta1 contains a heap-based buffer over-read. The get_next_packet() function in the send_packets.c file uses the memcpy() function unsafely to copy sequences from the source buffer pktdata to the destination (*prev_packet)->pktdata. This will result in a Denial of Service (DoS) and potentially Information Exposure when the application attempts to process a file.	tcpreplay	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4794
2117	CVE-2018-17580	MEDIUM	HIGH	A heap-based buffer over-read exists in the function fast_edit_packet() in the file send_packets.c of Tcpreplay v4.3.0 beta1. This can lead to Denial of Service (DoS) and potentially Information Exposure when the application attempts to process a crafted pcap file.	tcpreplay	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4801
2118	CVE-2018-17540	MEDIUM	HIGH	The gmp plugin in strongSwan before 5.7.1 has a Buffer Overflow via a crafted certificate.	strongswan	Unchanged	8.0.0.28	9.0.0.18	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4782
2119	CVE-2018-17456	HIGH	CRITICAL	Git before 2.14.5, 2.15.x before 2.15.3, 2.16.x before 2.16.5, 2.17.x before 2.17.2, 2.18.x before 2.18.1, and 2.19.x before 2.19.1 allows remote code execution during processing of a recursive git clone of a superproject if a .gitmodules file has a URL field beginning with a '-' character.	git	Unchanged	Vulnerable	Vulnerable	Vulnerable	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4785
2120	CVE-2018-17360	MEDIUM	MEDIUM	An issue was discovered in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.31. a heap-based buffer over-read in bfd_getl32 in libbfd.c allows an attacker to cause a denial of service through a crafted PE file. This vulnerability can be triggered by the executable objdump.	binutils	Unchanged	8.0.0.28	9.0.0.18	10.17.41.13	10.18.44.2	Not vulnerable	Not vulnerable	LIN10-4792
2121	CVE-2018-17359	MEDIUM	MEDIUM	An issue was discovered in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.31. An invalid memory access exists in bfd_zalloc in opncls.c. Attackers could leverage this vulnerability to cause a denial of service (application crash) via a crafted ELF file.	binutils	Unchanged	8.0.0.28	9.0.0.18	10.17.41.13	10.18.44.2	Not vulnerable	Not vulnerable	LIN10-4823
2122	CVE-2018-17358	MEDIUM	MEDIUM	An issue was discovered in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.31. An invalid memory access exists in _bfd_stab_section_find_nearest_line in syms.c. Attackers could leverage this vulnerability to cause a denial of service (application crash) via a crafted ELF file.	binutils	Unchanged	8.0.0.28	9.0.0.18	10.17.41.13	10.18.44.2	Not vulnerable	Not vulnerable	LIN10-4790
2123	CVE-2018-17336	MEDIUM	HIGH	UDisks 2.8.0 has a format string vulnerability in udisks_log in udiskslogging.c, allowing attackers to obtain sensitive information (stack contents), cause a denial of service (memory corruption), or possibly have unspecified other impact via a malformed filesystem label, as demonstrated by %d or %n substrings.	udisks	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4806
2124	CVE-2018-17204	MEDIUM	MEDIUM	An issue was discovered in Open vSwitch (OvS) 2.7.x through 2.7.6, affecting parse_group_prop_ntr_selection_method in lib/ofp-util.c. When decoding a group mod, it validates the group type and command after the whole group mod has been decoded. The OF1.5 decoder, however, tries to use the type and command earlier, when it might still be invalid. This causes an assertion failure (via OVS_NOT_REACHED). ovs-vswitchd does not enable support for OpenFlow 1.5 by default.	openvswitch	Unchanged	8.0.0.28	9.0.0.18	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4812
2125	CVE-2018-17199	MEDIUM	HIGH	In Apache HTTP Server 2.4 release 2.4.37 and prior, mod_session checks the session expiry time before decoding the session. This causes session expiry time to be ignored for mod_session_cookie sessions since the expiry time is loaded when the session is decoded.	apache	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3513
2126	CVE-2018-17189	MEDIUM	MEDIUM	In Apache HTTP server versions 2.4.37 and prior, by sending request bodies in a slow loris way to plain resources, the h2 stream for that request unnecessarily occupied a server thread cleaning up that incoming data. This affects only HTTP/2 (mod_http2) connections.	apache	Unchanged	Not vulnerable	Vulnerable	10.17.41.15	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3550
2127	CVE-2018-17183	MEDIUM	HIGH	Artifex Ghostscript before 9.25 allowed a user-writable error exception table, which could be used by remote attackers able to supply crafted PostScript to potentially overwrite or replace error handlers to inject code.	ghostscript	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4786
2128	CVE-2018-17182	HIGH	HIGH	An issue was discovered in the Linux kernel through 4.18.8. The vmacache_flush_all function in mm/vmacache.c mishandles sequence number overflows. An attacker can trigger a use-after-free (and possibly gain privileges) via certain thread creation, map, unmap, invalidation, and dereference operations.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4773
2129	CVE-2018-17101	MEDIUM	HIGH	An issue was discovered in LibTIFF 4.0.9. There are two out-of-bounds writes in cpTags in tools/tiff2bw.c and tools/pal2rgb.c, which can cause a denial of service (application crash) or possibly have unspecified other impact via a crafted image file.	tiff	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4732
2130	CVE-2018-17100	MEDIUM	HIGH	An issue was discovered in LibTIFF 4.0.9. There is a int32 overflow in multiply_ms in tools/ppm2tiff.c, which can cause a denial of service (crash) or possibly have unspecified other impact via a crafted image file.	tiff	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4695

	A	B	C	D	E	F	G	H	I	J	K	L	M
2131	CVE-2018-17082	MEDIUM	MEDIUM	The Apache2 component in PHP before 5.6.38, 7.0.x before 7.0.32, 7.1.x before 7.1.22, and 7.2.x before 7.2.10 allows XSS via the body of a Transfer-Encoding: chunked request, because the bucket brigade is mishandled in the php_handler function in sapi/apache2handler/sapi_apache2.c.	php	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4729
2132	CVE-2018-17075	MEDIUM	HIGH	The html package (aka x/net/html) before 2018-07-13 in Go mishandles in frameset insertion mode, leading to a panic: runtime error for html.Parse of <template><object>, <template><applet>, or <template><marquee>. This is related to HTMLTreeBuilder.cpp in WebKit.	go	Unchanged	Not vulnerable	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4692
2133	CVE-2018-17000	MEDIUM	MEDIUM	A NULL pointer dereference in the function _TIFFmemcmp at tif_unix.c (called from TIFFWriteDirectoryTagTransferfunction) in LibTIFF 4.0.9 allows an attacker to cause a denial-of-service through a crafted tiff file. This vulnerability can be triggered by the executable tiffcp.	tiff	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	Not vulnerable	Not vulnerable	LIN10-4693
2134	CVE-2018-16999	MEDIUM	MEDIUM	Netwide Assembler (NASM) 2.14rc15 has an invalid memory write (segmentation fault) in expand_smacro in preproc.c, which allows attackers to cause a denial of service via a crafted input file.	nasm	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.5	Not vulnerable	Not vulnerable	LIN10-4965
2135	CVE-2018-16983	HIGH	CRITICAL	NoScript Classic before 5.1.8.7, as used in Tor Browser 7.x and other products, allows attackers to bypass script blocking via the text/html;/json Content-Type value.	tor	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4680
2136	CVE-2018-16890	Medium	MEDIUM	libcurl versions from 7.36.0 to before 7.64.0 is vulnerable to a heap buffer out-of-bounds read. The function handling incoming NTLM type-2 messages (`lib/vauth/ntlm.c:ntlm_decode_type2_target`) does not validate incoming data correctly and is subject to an integer overflow vulnerability. Using that overflow, a malicious or broken NTLM server could trick libcurl to accept a bad length + offset combination that would lead to a buffer read out-of-bounds.	curl	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3561
2137	CVE-2018-16889	MEDIUM	HIGH	Ceph does not properly sanitize encryption keys in debug logging for v4 auth. This results in the leaking of encryption key information in log files via plaintext	ceph	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3376
2138	CVE-2018-16888	LOW	MEDIUM	It was discovered systemd does not correctly check the content of PIDFile files before using it to kill processes. When a service is run from an unprivileged user (e.g. User field set in the service file), a local attacker who is able to write to the PIDFile of the mentioned service may use this flaw to trick systemd into killing other services and/or privileged processes. Versions before v237 are vulnerable.	systemd	Unchanged	Vulnerable	Vulnerable	10.17.41.14	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3406
2139	CVE-2018-16886	MEDIUM	HIGH	etcd versions 3.2.x before 3.2.26 and 3.3.x before 3.3.11 are vulnerable to an improper authentication issue when role-based access control (RBAC) is used and client-cert-auth is enabled. If an etcd client server TLS certificate contains a Common Name (CN) which matches a valid RBAC username, a remote attacker may authenticate as that user with any valid (trusted) client certificate in a REST API request to the gRPC-gateway.	etcd	Unchanged	Vulnerable	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	LIN1018-3405
2140	CVE-2018-16885	MEDIUM	MEDIUM	A flaw was found in the Linux kernel that allows the userspace to call memcpy_fromiovecend() and similar functions with a zero offset and buffer length which causes the read beyond the buffer boundaries, in certain cases causing a memory access fault and a system halt by accessing invalid memory address. This issue only affects kernel version 3.10.x as shipped with Red Hat Enterprise Linux 7.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3389
2141	CVE-2018-16884	MEDIUM	HIGH	A flaw was found in the Linux kernel in the NFS41+ subsystem. NFS41+ shares mounted in different network namespaces at the same time can make bc_svc_process() use wrong back-channel id and cause a use-after-free. Thus a malicious container user can cause a host kernel memory corruption and a system panic. Due to the nature of the flaw, privilege escalation cannot be fully ruled out.	linux	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.5	Not vulnerable	Vulnerable	LIN1018-3226
2142	CVE-2018-16883	LOW	MEDIUM	sssd versions from 1.13.0 to before 2.0.0 did not properly restrict access to the infopipe according to the allowed_uids configuration parameter. If sensitive information were stored in the user directory, this could be inadvertently disclosed to local attackers.	sssd	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3342
2143	CVE-2018-16882	MEDIUM	HIGH	A use-after-free issue was found in the way the Linux kernel's KVM hypervisor processed posted interrupts when nested(=1) virtualization is enabled. In nested_get_vmcs12_pages(), in case of an error while processing posted interrupt address, it unmaps the 'pi_desc_page' without resetting 'pi_desc' descriptor address, which is later used in pi_test_and_clear_on(). A guest user/process could use this flaw to crash the host kernel resulting in DoS or potentially gain privileged access to a system. Kernel versions before 4.14.91 and before 4.19.13 are vulnerable.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3390
2144	CVE-2018-16881	Medium	HIGH	A denial of service vulnerability was found in rsyslog in the imptcp module. An attacker could send a specially crafted message to the imptcp socket, which would cause rsyslog to crash. Versions before 8.27.0 are vulnerable.	rsyslog	Unchanged	8.0.0.30	9.0.0.20	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3569
2145	CVE-2018-16880	Medium	HIGH	A flaw was found in the Linux kernel's handle_rx() function in the [vhost_net] driver. A malicious virtual guest, under specific conditions, can trigger an out-of-bounds write in a kmalloc-8 slab on a virtual host which may lead to a kernel memory corruption and a system panic. Due to the nature of the flaw, privilege escalation cannot be fully ruled out. Versions from v4.16 and newer are vulnerable.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.5	Not vulnerable	Not vulnerable	LIN1018-3525
2146	CVE-2018-16878	Low	MEDIUM	A flaw was found in pacemaker up to and including version 2.0.1. An insufficient verification inflicted preference of uncontrolled processes can lead to DoS	pacemaker	Unchanged	Vulnerable	Vulnerable	Vulnerable	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3960

	A	B	C	D	E	F	G	H	I	J	K	L	M
2147	CVE-2018-16877	Medium	HIGH	A flaw was found in the way pacemaker's client-server authentication was implemented in versions up to and including 2.0.0. A local attacker could use this flaw, and combine it with other IPC weaknesses, to achieve local privilege escalation.	pacemaker	Unchanged	Vulnerable	Vulnerable	Vulnerable	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3961
2148	CVE-2018-16875	HIGH	HIGH	The crypto/x509 package of Go before 1.10.6 and 1.11.x before 1.11.3 does not limit the amount of work performed for each chain verification, which might allow attackers to craft pathological inputs leading to a CPU denial of service. Go TLS servers accepting client certificates and TLS clients are affected.	go	Unchanged	Not vulnerable	Won't Fix	10.17.41.14	10.18.44.3	10.19.45.1	Not vulnerable	LIN1018-3230
2149	CVE-2018-16874	MEDIUM	HIGH	In Go before 1.10.6 and 1.11.x before 1.11.3, the go get command is vulnerable to directory traversal when executed with the import path of a malicious Go package which contains curly braces (both '{' and '}' characters). Specifically, it is only vulnerable in GOPATH mode, but not in module mode (the distinction is documented at https://golang.org/cmd/go/#hdr-Module_aware_go_get). The attacker can cause an arbitrary filesystem write, which can lead to code execution.	go	Unchanged	Not vulnerable	Won't Fix	10.17.41.14	10.18.44.3	10.19.45.1	Not vulnerable	LIN1018-3201
2150	CVE-2018-16873	MEDIUM	HIGH	In Go before 1.10.6 and 1.11.x before 1.11.3, the go get command is vulnerable to remote code execution when executed with the -u flag and the import path of a malicious Go package, or a package that imports it directly or indirectly. Specifically, it is only vulnerable in GOPATH mode, but not in module mode (the distinction is documented at https://golang.org/cmd/go/#hdr-Module_aware_go_get). Using custom domains, it's possible to arrange things so that a Git repository is cloned to a folder named .git by using a vanity import path that ends with /.git. If the Git repository root contains a HEAD file, a config file, an objects directory, a refs directory, with some work to ensure the proper ordering of operations, go get -u can be tricked into considering the parent directory as a repository root, and running Git commands on it. That will use the config file in the original Git repository root for its configuration, and if that config file contains malicious commands, they will execute on the system running go get -u.	go	Unchanged	Not vulnerable	Won't Fix	10.17.41.14	10.18.44.3	10.19.45.1	Not vulnerable	LIN1018-3249
2151	CVE-2018-16872	LOW	MEDIUM	A flaw was found in qemu Media Transfer Protocol (MTP). The code opening files in usb_mtp_get_object and usb_mtp_get_partial_object and directories in usb_mtp_object_readdir doesn't consider that the underlying filesystem may have changed since the time lstat(2) was called in usb_mtp_object_alloc, a classical TOCTTOU problem. An attacker with write access to the host filesystem shared with a guest can use this property to navigate the host filesystem in the context of the QEMU process and read any file the QEMU process has access to. Access to the filesystem may be local or via a network share protocol such as CIFS.	qemu	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	10.19.45.1	Not vulnerable	LIN1018-3242
2152	CVE-2018-16871	MEDIUM	HIGH	A flaw was found in the Linux kernel's NFS implementation, all versions 3.x and all versions 4.x up to 4.20. An attacker, who is able to mount an exported NFS filesystem, is able to trigger a null pointer dereference by using an invalid NFS sequence. This can panic the machine and deny access to the NFS server. Any outstanding disk writes to the NFS server will be lost.	linux	Unchanged	Not vulnerable	9.0.0.22	10.17.41.18	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4573
2153	CVE-2018-16870	MEDIUM	MEDIUM	It was found that wolfssl before 3.15.7 is vulnerable to a new variant of the Bleichenbacher attack to perform downgrade attacks against TLS. This may lead to leakage of sensible data.	wolfssl	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3416
2154	CVE-2018-16869	LOW	MEDIUM	A Bleichenbacher type side-channel based padding oracle attack was found in the way nettle handles endian conversion of RSA decrypted PKCS#1 v1.5 data. An attacker who is able to run a process on the same physical core as the victim process, could use this flaw extract plaintext or in some cases downgrade any TLS connections to a vulnerable server.	nettle	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3197
2155	CVE-2018-16868	LOW	MEDIUM	A Bleichenbacher type side-channel based padding oracle attack was found in the way gnutls handles verification of RSA decrypted PKCS#1 v1.5 data. An attacker who is able to run process on the same physical core as the victim process, could use this to extract plaintext or in some cases downgrade any TLS connections to a vulnerable server.	gnutls	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3200
2156	CVE-2018-16867	MEDIUM	HIGH	A flaw was found in qemu Media Transfer Protocol (MTP) before version 3.1.0. A path traversal in the in usb_mtp_write_data function in hw/usb/dev-mtp.c due to an improper filename sanitization. When the guest device is mounted in read-write mode, this allows to read/write arbitrary files which may lead do DoS scenario OR possibly lead to code execution on the host.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3257
2157	CVE-2018-16866	LOW	LOW	An out of bounds read was discovered in systemd-journald in the way it parses log messages that terminate with a colon ':'. A local attacker can use this flaw to disclose process memory data. Versions from v221 to v239 are vulnerable.	systemd	Unchanged	8.0.0.30	9.0.0.20	10.17.41.14	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3408
2158	CVE-2018-16865	MEDIUM	HIGH	An allocation of memory without limits, that could result in the stack clashing with another memory region, was discovered in systemd-journald when many entries are sent to the journal socket. A local attacker, or a remote one if systemd-journal-remote is used, may use this flaw to crash systemd-journald or execute code with journald privileges. Versions through v240 are vulnerable.	systemd	Unchanged	8.0.0.30	9.0.0.20	10.17.41.14	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3379

	A	B	C	D	E	F	G	H	I	J	K	L	M
2159	CVE-2018-16864	MEDIUM	HIGH	An allocation of memory without limits, that could result in the stack clashing with another memory region, was discovered in systemd-journald when a program with long command line arguments calls syslog. A local attacker may use this flaw to crash systemd-journald or escalate his privileges. Versions through v240 are vulnerable.	systemd	Unchanged	8.0.0.30	9.0.0.20	10.17.41.14	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3404
2160	CVE-2018-16863	HIGH	HIGH	It was found that RHSA-2018:2918 did not fully fix CVE-2018-16509. An attacker could possibly exploit another variant of the flaw and bypass the -dSAFER protection to, for example, execute arbitrary shell commands via a specially crafted PostScript document. This only affects ghostscript 9.07 as shipped with Red Hat Enterprise Linux 7.	ghostscript	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3213
2161	CVE-2018-16862	LOW	MEDIUM	A security flaw was found in the Linux kernel in a way that the cleancache subsystem clears an inode after the final file truncation (removal). The new file created with the same inode may contain leftover pages from cleancache and so the old file data instead of the new one.	linux	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.5	Not vulnerable	Not vulnerable	LIN10-5058
2162	CVE-2018-16860	Medium	HIGH	A flaw was found in samba's Heimdal KDC implementation, versions 4.8.x up to, excluding 4.8.12, 4.9.x up to, excluding 4.9.8 and 4.10.x up to, excluding 4.10.3, when used in AD DC mode. A man in the middle attacker could use this flaw to intercept the request to the KDC and replace the user name (principal) in the request with any desired user name (principal) that exists in the KDC effectively obtaining a ticket for that principal.	samba	Unchanged	Not vulnerable	Not vulnerable	10.17.41.17	10.18.44.10	Not vulnerable	Not vulnerable	LIN1018-4596
2163	CVE-2018-16857	MEDIUM	MEDIUM	Samba from version 4.9.0 and before version 4.9.3 that have AD DC configurations watching for bad passwords (to restrict brute forcing of passwords) in a window of more than 3 minutes may not watch for bad passwords at all. The primary risk from this issue is with regards to domains that have been upgraded from Samba 4.8 and earlier. In these cases the manual testing done to confirm an organisation's password policies apply as expected may not have been re-done after the upgrade.	samba	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3254
2164	CVE-2018-16853	MEDIUM	MEDIUM	Samba from version 4.7.0 has a vulnerability that allows a user in a Samba AD domain to crash the KDC when Samba is built in the non-default MIT Kerberos configuration. With this advisory the Samba Team clarify that the MIT Kerberos build of the Samba AD DC is considered experimental. Therefore the Samba Team will not issue security patches for this configuration. Additionally, Samba 4.7.12, 4.8.7 and 4.9.3 have been issued as security releases to prevent building of the AD DC with MIT Kerberos unless --with-experimental-mit-ad-dc is specified to the configure command.	samba	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3244
2165	CVE-2018-16852	LOW	MEDIUM	Samba from version 4.9.0 and before version 4.9.3 is vulnerable to a NULL pointer de-reference. During the processing of an DNS zone in the DNS management DCE/RPC server, the internal DNS server or the Samba DLZ plugin for BIND9, if the DSPROPERTY_ZONE_MASTER_SERVERS property or DSPROPERTY_ZONE_SCAVENGING_SERVERS property is set, the server will follow a NULL pointer and terminate. There is no further vulnerability associated with this issue, merely a denial of service.	samba	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3238
2166	CVE-2018-16851	MEDIUM	MEDIUM	Samba from version 4.0.0 and before versions 4.7.12, 4.8.7, 4.9.3 is vulnerable to a denial of service. During the processing of an LDAP search before Samba's AD DC returns the LDAP entries to the client, the entries are cached in a single memory object with a maximum size of 256MB. When this size is reached, the Samba process providing the LDAP service will follow the NULL pointer, terminating the process. There is no further vulnerability associated with this issue, merely a denial of service.	samba	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3245
2167	CVE-2018-16850	HIGH	CRITICAL	postgresql before versions 11.1, 10.6 is vulnerable to a to SQL injection in pg_upgrade and pg_dump via CREATE TRIGGER ... REFERENCING. Using a purpose-crafted trigger definition, an attacker can cause arbitrary SQL statements to run, with superuser privileges.	postgresql	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-5013
2168	CVE-2018-16847	MEDIUM	HIGH	An OOB heap buffer r/w access issue was found in the NVM Express Controller emulation in QEMU. It could occur in nvme_cmb_ops routines in nvme device. A guest user/process could use this flaw to crash the QEMU process resulting in DoS or potentially run arbitrary code with privileges of the QEMU process.	qemu	Unchanged	Not vulnerable	Not vulnerable	10.17.41.13	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4991
2169	CVE-2018-16846	MEDIUM	MEDIUM	ceph: ListBucket max-keys has no defined limit in the RGW codebase	ceph	Unchanged	8.0.0.30	9.0.0.20	Won't Fix	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3385
2170	CVE-2018-16845	MEDIUM	MEDIUM	nginx before versions 1.15.6, 1.14.1 has a vulnerability in the ngx_http_mp4_module, which might allow an attacker to cause infinite loop in a worker process, cause a worker process crash, or might result in worker process memory disclosure by using a specially crafted mp4 file. The issue only affects nginx if it is built with the ngx_http_mp4_module (the module is not built by default) and the .mp4. directive is used in the configuration file. Further, the attack is only possible if an attacker is able to trigger processing of a specially crafted mp4 file with the ngx_http_mp4_module.	nginx	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5007
2171	CVE-2018-16844	HIGH	HIGH	nginx before versions 1.15.6 and 1.14.1 has a vulnerability in the implementation of HTTP/2 that can allow for excessive CPU usage. This issue affects nginx compiled with the ngx_http_v2_module (not compiled by default) if the 'http2' option of the 'listen' directive is used in a configuration file.	nginx	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5008

	A	B	C	D	E	F	G	H	I	J	K	L	M
2172	CVE-2018-16843	HIGH	HIGH	nginx before versions 1.15.6 and 1.14.1 has a vulnerability in the implementation of HTTP/2 that can allow for excessive memory consumption. This issue affects nginx compiled with the ngx_http_v2_module (not compiled by default) if the 'http2' option of the 'listen' directive is used in a configuration file.	nginx	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4980
2173	CVE-2018-16842	MEDIUM	CRITICAL	curl contains a heap out of buffer read vulnerability. The command line tool has a generic function for displaying warning and informational messages to stderr for various situations. For example if an unknown command line argument is used, or passed to it in a "config" file. This display function formats the output to wrap at 80 columns. The wrap logic is however flawed, so if a single word in the message is itself longer than 80 bytes the buffer arithmetic calculates the remainder wrong and will end up reading behind the end of the buffer. This could lead to information disclosure or crash.	curl	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	Not vulnerable	Vulnerable	LIN10-4867
2174	CVE-2018-16841	MEDIUM	MEDIUM	Samba from version 4.3.0 and before versions 4.7.12, 4.8.7 and 4.9.3 are vulnerable to a denial of service. When configured to accept smart-card authentication, Samba's KDC will call talloc_free() twice on the same memory if the principal in a validly signed certificate does not match the principal in the AS-REQ. This is only possible after authentication with a trusted certificate. talloc is robust against further corruption from a double-free with talloc_free() and directly calls abort(), terminating the KDC process.	samba	Unchanged	Not vulnerable	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3261
2175	CVE-2018-16840	HIGH	CRITICAL	libcurl contains a heap use-after-free flaw in code related to closing an easy handle. When closing and cleaning up an "easy" handle in the Curl_close() function, the library code first frees a struct (without nulling the pointer) and might then subsequently erroneously write to a struct field within that already freed struct.	curl	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.3	Not vulnerable	Vulnerable	LIN10-4887
2176	CVE-2018-16839	HIGH	CRITICAL	libcurl contains a buffer overrun in the SASL authentication code. The internal function Curl_auth_create_plain_message fails to correctly verify that the passed in lengths for name and password aren't too long, then calculates a buffer size to allocate. On systems with a 32 bit size_t, the math to calculate the buffer size triggers an integer overflow when the user name length exceeds 2GB (2^31 bytes). This integer overflow usually causes a very small buffer to actually get allocated instead of the intended very huge one, making the use of that buffer end up in a heap buffer overflow.	curl	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	Not vulnerable	Vulnerable	LIN10-4881
2177	CVE-2018-16838	MEDIUM	MEDIUM	A flaw was found in sssd Group Policy Objects implementation. When the GPO is not readable by SSSD due to a too strict permission settings on the server side, SSSD will allow all authenticated users to login instead of denying access.	sssd	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	10.18.44.15	10.19.45.6	Won't Fix	LIN1018-3799
2178	CVE-2018-16802	MEDIUM	HIGH	An issue was discovered in Artifex Ghostscript before 9.25. Incorrect restoration of privilege checking when running out of stack during exception handling could be used by attackers able to supply crafted PostScript to execute code using the pipe instruction. This is due to an incomplete fix for CVE-2018-16509.	ghostscript	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4703
2179	CVE-2018-16790	MEDIUM	HIGH	_bson_iter_next_internal in bson-iter.c in libbson 1.12.0, as used in MongoDB mongo-c-driver and other products, has a heap-based buffer over-read via a crafted bson buffer.	mongodb	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4684
2180	CVE-2018-16750	MEDIUM	MEDIUM	In ImageMagick 7.0.7-29 and earlier, a memory leak in the formatIPTCfromBuffer function in coders/meta.c was found.	imagemagick	Unchanged	8.0.0.28	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4711
2181	CVE-2018-16749	MEDIUM	MEDIUM	In ImageMagick 7.0.7-29 and earlier, a missing NULL check in ReadOneJNGImage in coders/png.c allows an attacker to cause a denial of service (WriteBlob assertion failure and application exit) via a crafted file.	imagemagick	Unchanged	8.0.0.28	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4672
2182	CVE-2018-16658	LOW	MEDIUM	An issue was discovered in the Linux kernel before 4.18.6. An information leak in cdrom_ioctl_drive_status in drivers/cdrom/cdrom.c could be used by local attackers to read kernel memory because a cast from unsigned long to int interferes with bounds checking. This is similar to CVE-2018-10940.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4700
2183	CVE-2018-16646	MEDIUM	MEDIUM	In Poppler 0.68.0, the Parser::getObj() function in Parser.cc may cause infinite recursion via a crafted file. A remote attacker can leverage this for a DoS attack.	poppler	Unchanged	Won't Fix	9.0.0.22	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4738
2184	CVE-2018-16645	MEDIUM	MEDIUM	There is an excessive memory allocation issue in the functions ReadBMPImage of coders/bmp.c and ReadDIBImage of coders/dib.c in ImageMagick 7.0.8-11, which allows remote attackers to cause a denial of service via a crafted image file.	imagemagick	Unchanged	8.0.0.28	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4716
2185	CVE-2018-16644	MEDIUM	MEDIUM	There is a missing check for length in the functions ReadDCMImage of coders/dcm.c and ReadPICTImage of coders/pict.c in ImageMagick 7.0.8-11, which allows remote attackers to cause a denial of service via a crafted image.	imagemagick	Unchanged	8.0.0.28	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4683
2186	CVE-2018-16643	MEDIUM	MEDIUM	The functions ReadDCMImage in coders/dcm.c, ReadPWPImage in coders/pwp.c, ReadCALSImage in coders/cals.c, and ReadPICTImage in coders/pict.c in ImageMagick 7.0.8-4 do not check the return value of the fputc function, which allows remote attackers to cause a denial of service via a crafted image file.	imagemagick	Unchanged	8.0.0.28	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4707
2187	CVE-2018-16642	MEDIUM	MEDIUM	The function InsertRow in coders/cut.c in ImageMagick 7.0.7-37 allows remote attackers to cause a denial of service via a crafted image file due to an out-of-bounds write.	imagemagick	Unchanged	8.0.0.28	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4686
2188	CVE-2018-16641	MEDIUM	MEDIUM	ImageMagick 7.0.8-6 has a memory leak vulnerability in the TIFFWritePhotoshopLayers function in coders/tiff.c.	imagemagick	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4714
2189	CVE-2018-16640	MEDIUM	MEDIUM	ImageMagick 7.0.8-5 has a memory leak vulnerability in the function ReadOneJNGImage in coders/png.c.	imagemagick	Unchanged	8.0.0.28	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4691

	A	B	C	D	E	F	G	H	I	J	K	L	M
2190	CVE-2018-16597	MEDIUM	MEDIUM	An issue was discovered in the Linux kernel through 4.18.6. Incorrect access checking in overlayfs mounts could be used by local attackers to modify or truncate files in the underlying filesystem.	linux	Unchanged	8.0.0.28	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4774
2191	CVE-2018-16585	MEDIUM	HIGH	An issue was discovered in Artifex Ghostscript before 9.24. The .setdistillerkeys PostScript command is accepted even though it is not intended for use during document processing (e.g., after the startup phase). This leads to memory corruption, allowing remote attackers able to supply crafted PostScript to crash the interpreter or possibly have unspecified other impact.	ghostscript	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4675
2192	CVE-2018-16543	MEDIUM	HIGH	In Artifex Ghostscript before 9.24, gssetresolution and gsgetresolution allow attackers to have an unspecified impact.	ghostscript	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4743
2193	CVE-2018-16542	MEDIUM	MEDIUM	In Artifex Ghostscript before 9.24, attackers able to supply crafted PostScript files could use insufficient interpreter stack-size checking during error handling to crash the interpreter.	ghostscript	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4731
2194	CVE-2018-16541	MEDIUM	MEDIUM	In Artifex Ghostscript before 9.24, attackers able to supply crafted PostScript files could use incorrect free logic in pagedevice replacement to crash the interpreter.	ghostscript	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4734
2195	CVE-2018-16540	MEDIUM	HIGH	In Artifex Ghostscript before 9.24, attackers able to supply crafted PostScript files to the builtin PDF14 converter could use a use-after-free in copydevice handling to crash the interpreter or possibly have unspecified other impact.	ghostscript	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4718
2196	CVE-2018-16539	MEDIUM	MEDIUM	In Artifex Ghostscript before 9.24, attackers able to supply crafted PostScript files could use incorrect access checking in temp file handling to disclose contents of files on the system otherwise not readable.	ghostscript	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4737
2197	CVE-2018-16513	MEDIUM	HIGH	In Artifex Ghostscript before 9.24, attackers able to supply crafted PostScript files could use a type confusion in the setcolor function to crash the interpreter or possibly have unspecified other impact.	ghostscript	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4745
2198	CVE-2018-16511	MEDIUM	HIGH	An issue was discovered in Artifex Ghostscript before 9.24. A type confusion in ztype could be used by remote attackers able to supply crafted PostScript to crash the interpreter or possibly have unspecified other impact.	ghostscript	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4702
2199	CVE-2018-16510	MEDIUM	HIGH	An issue was discovered in Artifex Ghostscript before 9.24. Incorrect exec stack handling in the CS and SC PDF primitives could be used by remote attackers able to supply crafted PDFs to crash the interpreter or possibly have unspecified other impact.	ghostscript	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4704
2200	CVE-2018-16509	HIGH	HIGH	An issue was discovered in Artifex Ghostscript before 9.24. Incorrect restoration of privilege checking during handling of /invalidaccess exceptions could be used by attackers able to supply crafted PostScript to execute code using the pipe instruction.	ghostscript	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4742
2201	CVE-2018-16471	MEDIUM	MEDIUM	There is a possible XSS vulnerability in Rack before 2.0.6 and 1.6.11. Carefully crafted requests can impact the data returned by the `scheme` method on `Rack::Request`. Applications that expect the scheme to be limited to 'http' or 'https' and do not escape the return value could be vulnerable to an XSS attack. Note that applications using the normal escaping mechanisms provided by Rails may not impacted, but applications that bypass the escaping mechanisms, or do not use them may be vulnerable.	rack	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-5020
2202	CVE-2018-16470	MEDIUM	HIGH	There is a possible DoS vulnerability in the multipart parser in Rack before 2.0.6. Specially crafted requests can cause the multipart parser to enter a pathological state, causing the parser to use CPU resources disproportionate to the request size.	rack	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4990
2203	CVE-2018-16452	Medium	HIGH	The SMB parser in tcpdump before 4.9.3 has stack exhaustion in smbutil.c:smb_fdata() via recursion.	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-5002
2204	CVE-2018-16451	High	CRITICAL	The SMB parser in tcpdump before 4.9.3 has buffer over-reads in print-smb.c:print_trans() for \MAILSLOT\BROWSE and \PIPE\LANMAN.	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-5001
2205	CVE-2018-16427	LOW	MEDIUM	Various out of bounds reads when handling responses in OpenSC before 0.19.0-rc1 could be used by attackers able to supply crafted smartcards to potentially crash the opensc library using programs.	opensc	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4726
2206	CVE-2018-16426	LOW	MEDIUM	Endless recursion when handling responses from an IAS-ECC card in iasecc_select_file in libopensc/card-iasecc.c in OpenSC before 0.19.0-rc1 could be used by attackers able to supply crafted smartcards to hang or crash the opensc library using programs.	opensc	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4723
2207	CVE-2018-16425	MEDIUM	MEDIUM	A double free when handling responses from an HSM Card in sc_pkcs15emu_sc_hsm_init in libopensc/pkcs15-sc-hsm.c in OpenSC before 0.19.0-rc1 could be used by attackers able to supply crafted smartcards to cause a denial of service (application crash) or possibly have unspecified other impact.	opensc	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4727
2208	CVE-2018-16424	MEDIUM	MEDIUM	A double free when handling responses in read_file in tools/egk-tool.c (aka the eGK card tool) in OpenSC before 0.19.0-rc1 could be used by attackers able to supply crafted smartcards to cause a denial of service (application crash) or possibly have unspecified other impact.	opensc	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4715
2209	CVE-2018-16423	MEDIUM	MEDIUM	A double free when handling responses from a smartcard in sc_file_set_sec_attr in libopensc/sc.c in OpenSC before 0.19.0-rc1 could be used by attackers able to supply crafted smartcards to cause a denial of service (application crash) or possibly have unspecified other impact.	opensc	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4733

Local attackers could use user access read/writes with incorrect bounds checking in the yurex USB driver to crash the kernel or potentially escalate privileges.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4735
2233	CVE-2018-16230	High	CRITICAL	The BGP parser in tcpdump before 4.9.3 has a buffer over-read in print-bgp.c:bgp_attr_print() (MP_REACH_NLRI).	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4999
2234	CVE-2018-16229	High	CRITICAL	The DCCP parser in tcpdump before 4.9.3 has a buffer over-read in print-dccp.c:dccp_print_option().	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4998
2235	CVE-2018-16228	High	CRITICAL	The HNCP parser in tcpdump before 4.9.3 has a buffer over-read in print-hncp.c:print_prefix().	tcpdump	Unchanged	Not vulnerable	Not vulnerable	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4997
2236	CVE-2018-16227	High	CRITICAL	The IEEE 802.11 parser in tcpdump before 4.9.3 has a buffer over-read in print-802_11.c for the Mesh Flags subfield.	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4996
2237	CVE-2018-16152	MEDIUM	HIGH	In verify_emsa_pkcs1_signature() in gmp_rsa_public_key.c in the gmp plugin in strongSwan 4.x and 5.x before 5.7.0, the RSA implementation based on GMP does not reject excess data in the digestAlgorithm.parameters field during PKCS#1 v1.5 signature verification. Consequently, a remote attacker can forge signatures when small public exponents are being used, which could lead to impersonation when only an RSA signature is used for IKEv2 authentication. This is a variant of CVE-2006-4790 and CVE-2014-1568.	strongswan	Unchanged	8.0.0.28	9.0.0.18	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4800
2238	CVE-2018-16151	MEDIUM	HIGH	In verify_emsa_pkcs1_signature() in gmp_rsa_public_key.c in the gmp plugin in strongSwan 4.x and 5.x before 5.7.0, the RSA implementation based on GMP does not reject excess data after the encoded algorithm OID during PKCS#1 v1.5 signature verification. Similar to the flaw in the same version of strongSwan regarding digestAlgorithm.parameters, a remote attacker can forge signatures when small public exponents are being used, which could lead to impersonation when only an RSA signature is used for IKEv2 authentication.	strongswan	Unchanged	8.0.0.28	9.0.0.18	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4793
2239	CVE-2018-16062	MEDIUM	MEDIUM	dwarf_getaranges in dwarf_getaranges.c in libdw in elfutils before 2018-08-18 allows remote attackers to cause a denial of service (heap-based buffer over-read) via a crafted file.	elfutils	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4596
2240	CVE-2018-16058	MEDIUM	HIGH	In Wireshark 2.6.0 to 2.6.2, 2.4.0 to 2.4.8, and 2.2.0 to 2.2.16, the Bluetooth AVDTP dissector could crash. This was addressed in epan/dissectors/packet-btavdtp.c by properly initializing a data structure.	wireshark	Unchanged	8.0.0.28	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4615
2241	CVE-2018-16057	MEDIUM	HIGH	In Wireshark 2.6.0 to 2.6.2, 2.4.0 to 2.4.8, and 2.2.0 to 2.2.16, the Radiotap dissector could crash. This was addressed in epan/dissectors/packet-ieee80211-radiotap-iter.c by validating iterator operations.	wireshark	Unchanged	8.0.0.28	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4602
2242	CVE-2018-16056	MEDIUM	HIGH	In Wireshark 2.6.0 to 2.6.2, 2.4.0 to 2.4.8, and 2.2.0 to 2.2.16, the Bluetooth Attribute Protocol dissector could crash. This was addressed in epan/dissectors/packet-btatt.c by verifying that a dissector for a specific UUID exists.	wireshark	Unchanged	Not vulnerable	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4627
2243	CVE-2018-15919	MEDIUM	MEDIUM	Remotely observable behaviour in auth-gss2.c in OpenSSH through 7.8 could be used by remote attackers to detect existence of users on a target system when GSS2 is in use. NOTE: the discoverer states 'We understand that the OpenSSH developers do not want to treat such a username enumeration (or oracle) as a vulnerability.'	openssh	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN10-4616
2244	CVE-2018-15911	MEDIUM	HIGH	In Artifex Ghostscript 9.23 before 2018-08-24, attackers able to supply crafted PostScript could use uninitialized memory access in the aesdecode operator to crash the interpreter or potentially execute code.	ghostscript	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4633
2245	CVE-2018-15910	MEDIUM	HIGH	In Artifex Ghostscript 9.23 before 2018-08-23, attackers able to supply crafted PostScript files could use a type confusion in the LockDistillerParams parameter to crash the interpreter or execute code.	ghostscript	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4638
2246	CVE-2018-15909	MEDIUM	HIGH	In Artifex Ghostscript 9.23 before 2018-08-24, a type confusion using the .shfill operator could be used by attackers able to supply crafted PostScript files to crash the interpreter or potentially execute code.	ghostscript	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4609
2247	CVE-2018-15908	MEDIUM	HIGH	In Artifex Ghostscript 9.23 before 2018-08-23, attackers are able to supply malicious PostScript files to bypass .tempfile restrictions and write files.	ghostscript	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4599
2248	CVE-2018-15864	LOW	MEDIUM	Unchecked NULL pointer usage in resolve_keysym in xkbcomp/parser.y in xkbcommon before 0.8.2 could be used by local attackers to crash (NULL pointer dereference) the xkbcommon parser by supplying a crafted keymap file, because a map access attempt can occur for a map that was never created.	libxkbcommon	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4624
2249	CVE-2018-15863	LOW	MEDIUM	Unchecked NULL pointer usage in ResolveStateAndPredicate in xkbcomp/compat.c in xkbcommon before 0.8.2 could be used by local attackers to crash (NULL pointer dereference) the xkbcommon parser by supplying a crafted keymap file with a no-op modmask expression.	libxkbcommon	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4611

	A	B	C	D	E	F	G	H	I	J	K	L	M
2250	CVE-2018-15862	LOW	MEDIUM	Unchecked NULL pointer usage in LookupModMask in xkbcomp/expr.c in xkbcommon before 0.8.2 could be used by local attackers to crash (NULL pointer dereference) the xkbcommon parser by supplying a crafted keymap file with invalid virtual modifiers.	libxkbcommon	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4623
2251	CVE-2018-15861	LOW	MEDIUM	Unchecked NULL pointer usage in ExprResolveLhs in xkbcomp/expr.c in xkbcommon before 0.8.2 could be used by local attackers to crash (NULL pointer dereference) the xkbcommon parser by supplying a crafted keymap file that triggers an xkb_intern_atom failure.	libxkbcommon	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4594
2252	CVE-2018-15859	LOW	MEDIUM	Unchecked NULL pointer usage when parsing invalid atoms in ExprResolveLhs in xkbcomp/expr.c in xkbcommon before 0.8.2 could be used by local attackers to crash (NULL pointer dereference) the xkbcommon parser by supplying a crafted keymap file, because lookup failures are mishandled.	libxkbcommon	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4598
2253	CVE-2018-15858	LOW	MEDIUM	Unchecked NULL pointer usage when handling invalid aliases in CopyKeyAliasesToKeymap in xkbcomp/keycodes.c in xkbcommon before 0.8.1 could be used by local attackers to crash (NULL pointer dereference) the xkbcommon parser by supplying a crafted keymap file.	libxkbcommon	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4606
2254	CVE-2018-15857	MEDIUM	HIGH	An invalid free in ExprAppendMultiKeysymList in xkbcomp/ast-build.c in xkbcommon before 0.8.1 could be used by local attackers to crash xkbcommon keymap parsers or possibly have unspecified other impact by supplying a crafted keymap file.	libxkbcommon	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4587
2255	CVE-2018-15856	LOW	MEDIUM	An infinite loop when reaching EOL unexpectedly in compose/parser.c (aka the keymap parser) in xkbcommon before 0.8.1 could be used by local attackers to cause a denial of service during parsing of crafted keymap files.	libxkbcommon	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4608
2256	CVE-2018-15855	LOW	MEDIUM	Unchecked NULL pointer usage in xkbcommon before 0.8.1 could be used by local attackers to crash (NULL pointer dereference) the xkbcommon parser by supplying a crafted keymap file, because the XkbFile for an xkb_geometry section was mishandled.	libxkbcommon	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4620
2257	CVE-2018-15854	LOW	MEDIUM	Unchecked NULL pointer usage in xkbcommon before 0.8.1 could be used by local attackers to crash (NULL pointer dereference) the xkbcommon parser by supplying a crafted keymap file, because geometry tokens were desupported incorrectly.	libxkbcommon	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4604
2258	CVE-2018-15853	LOW	MEDIUM	Endless recursion exists in xkbcomp/expr.c in xkbcommon and libxkbcommon before 0.8.1, which could be used by local attackers to crash xkbcommon users by supplying a crafted keymap file that triggers boolean negation.	libxkbcommon	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4636
2259	CVE-2018-15822	MEDIUM	HIGH	The flv_write_packet function in libavformat/flvenc.c in FFmpeg through 4.0.2 does not check for an empty audio packet, leading to an assertion failure.	ffmpeg	Unchanged	Not vulnerable	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4614
2260	CVE-2018-15751	HIGH	CRITICAL	SaltStack Salt before 2017.7.8 and 2018.3.x before 2018.3.3 allow remote attackers to bypass authentication and execute arbitrary commands via salt-api(netapi).	salt	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4906
2261	CVE-2018-15750	MEDIUM	MEDIUM	Directory Traversal vulnerability in salt-api in SaltStack Salt before 2017.7.8 and 2018.3.x before 2018.3.3 allows remote attackers to determine which files exist on the server.	salt	Unchanged	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4895
2262	CVE-2018-15746	LOW	MEDIUM	qemu-seccomp.c in QEMU might allow local OS guest users to cause a denial of service (guest crash) by leveraging mishandling of the seccomp policy for threads other than the main thread.	qemu	Unchanged	Not vulnerable	9.0.0.19	10.17.41.13	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4588
2263	CVE-2018-15688	HIGH	CRITICAL	A buffer overflow vulnerability in the dhcp6 client of systemd allows a malicious dhcp6 server to overwrite heap memory in systemd-networkd. Affected releases are systemd: versions up to and including 239.	systemd	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	Not vulnerable	Vulnerable	LIN10-4901
2264	CVE-2018-15687	LOW	MEDIUM	A race condition in chown_one() of systemd allows an attacker to cause systemd to set arbitrary permissions on arbitrary files. Affected releases are systemd versions up to and including 239.	systemd	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.3	Not vulnerable	Vulnerable	LIN10-4931
2265	CVE-2018-15686	HIGH	CRITICAL	A vulnerability in unit_deserialize of systemd allows an attacker to supply arbitrary state across systemd re-execution via NotifyAccess. This can be used to improperly influence systemd execution and possibly lead to root privilege escalation. Affected releases are systemd versions up to and including 239.	systemd	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	10.19.45.1	Not vulnerable	LIN10-4874
2266	CVE-2018-15664	Medium	HIGH	In Docker through 18.06.1-ce-rc2, the API endpoints behind the 'docker cp' command are vulnerable to a symlink-exchange attack with Directory Traversal, giving attackers arbitrary read-write access to the host filesystem with root privileges, because daemon/archive.go does not do archive operations on a frozen filesystem (or from within a chroot).	docker	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	LIN1018-4151
2267	CVE-2018-15607	HIGH	MEDIUM	In ImageMagick 7.0.8-11 Q16, a tiny input file 0x50 0x36 0x36 0x36 0x36 0x4c 0x36 0x38 0x36 0x36 0x36 0x36 0x36 0x36 0x1f 0x35 0x50 0x00 can result in a hang of several minutes during which CPU and memory resources are consumed until ultimately an attempted large memory allocation fails. Remote attackers could leverage this vulnerability to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4632
2268	CVE-2018-15605	MEDIUM	MEDIUM	An issue was discovered in phpMyAdmin before 4.8.3. A Cross-Site Scripting vulnerability has been found where an attacker can use a crafted file to manipulate an authenticated user who loads that file through the import feature.	phpmyadmin	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4592
2269	CVE-2018-15599	MEDIUM	MEDIUM	The recv_msg_userauth_request function in svr-auth.c in Dropbear through 2018.76 is prone to a user enumeration vulnerability because username validity affects how fields in SSH_MSG_USERAUTH messages are handled, a similar issue to CVE-2018-15473 in an unrelated codebase.	dropbear	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4600

	A	B	C	D	E	F	G	H	I	J	K	L	M
2270	CVE-2018-15594	LOW	MEDIUM	arch/x86/kernel/paravirt.c in the Linux kernel before 4.18.1 mishandles certain indirect calls, which makes it easier for attackers to conduct Spectre-v2 attacks against paravirtual guests.	linux	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4621
2271	CVE-2018-15572	LOW	MEDIUM	The spectre_v2_select_mitigation function in arch/x86/kernel/cpu/bugs.c in the Linux kernel before 4.18.1 does not always fill RSB upon a context switch, which makes it easier for attackers to conduct userspace-userspace spectreRSB attacks.	linux	Unchanged	8.0.0.30	9.0.0.18	10.17.41.14	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4575
2272	CVE-2018-15501	MEDIUM	HIGH	In ng_pkt in transports/smart_pkt.c in libgit2 before 0.26.6 and 0.27.x before 0.27.4, a remote attacker can send a crafted smart-protocol ng packet that lacks a '\0' byte to trigger an out-of-bounds read that leads to DoS.	libgit2	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4589
2273	CVE-2018-15473	MEDIUM	MEDIUM	OpenSSH through 7.7 is prone to a user enumeration vulnerability due to not delaying bailout for an invalid authenticating user until after the packet containing the request has been fully parsed, related to auth2-gss.c, auth2-hostbased.c, and auth2-pubkey.c.	openssh	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4625
2274	CVE-2018-15471	MEDIUM	HIGH	An issue was discovered in xenvif_set_hash_mapping in drivers/net/xen-netback/hash.c in the Linux kernel through 4.18.1, as used in Xen through 4.11.x and other products. The Linux netback driver allows frontends to control mapping of requests to request queues. When processing a request to set or change this mapping, some input validation (e.g., for an integer overflow) was missing or flawed, leading to OOB access in hash handling. A malicious or buggy frontend may cause the (usually privileged) backend to make out of bounds memory accesses, potentially resulting in one or more of privilege escalation, Denial of Service (DoS), or information leaks.	linux	Unchanged	Not vulnerable	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4603
2275	CVE-2018-15378	MEDIUM	MEDIUM	A vulnerability in ClamAV versions prior to 0.100.2 could allow an attacker to cause a denial of service (DoS) condition. The vulnerability is due to an error related to the MEW unpacker within the unmew11() function (libclamav/mew.c), which can be exploited to trigger an invalid read memory access via a specially crafted EXE file.	clamav	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4919
2276	CVE-2018-15209	MEDIUM	HIGH	ChopUpSingleUncompressedStrip in tif_dirread.c in LibTIFF 4.0.9 allows remote attackers to cause a denial of service (heap-based buffer overflow and application crash) or possibly have unspecified other impact via a crafted TIFF file, as demonstrated by tiff2pdf.	tiff	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	Not vulnerable	Vulnerable	LIN10-4526
2277	CVE-2018-15173	MEDIUM	HIGH	Nmap through 7.70, when the -sV option is used, allows remote attackers to cause a denial of service (stack consumption and application crash) via a crafted TCP-based service.	nmap	Unchanged	Investigate	Investigate	Investigate	Investigate	Not vulnerable	Not vulnerable	LIN10-4543
2278	CVE-2018-15127	HIGH	CRITICAL	LibVNC before commit 502821828ed00b4a2c4bef90683d0fd88ce495de contains heap out-of-bound write vulnerability in server code of file transfer extension that can result remote code execution	libvncserver	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3293
2279	CVE-2018-15126	HIGH	CRITICAL	LibVNC before commit 73cb96fec028a576a5a24417b57723b55854ad7b contains heap use-after-free vulnerability in server code of file transfer extension that can result remote code execution	libvncserver	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3306
2280	CVE-2018-15120	MEDIUM	HIGH	libpango in Pango before 1.42.4, as used in hexchat and other products, allows remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via crafted text.	pango	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4630
2281	CVE-2018-14884	MEDIUM	HIGH	An issue was discovered in PHP 7.0.x before 7.0.27, 7.1.x before 7.1.13, and 7.2.x before 7.2.1. Inappropriately parsing an HTTP response leads to a segmentation fault because http_header_value in ext/standard/http_fopen_wrapper.c can be a NULL value that is mishandled in an atoi call.	php	Unchanged	Not vulnerable	Not vulnerable	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4549
2282	CVE-2018-14883	MEDIUM	HIGH	An issue was discovered in PHP before 5.6.37, 7.0.x before 7.0.31, 7.1.x before 7.1.20, and 7.2.x before 7.2.8. An Integer Overflow leads to a heap-based buffer over-read in exif_thumbnail_extract of exif.c.	php	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4527
2283	CVE-2018-14882	High	CRITICAL	The ICMPv6 parser in tcpdump before 4.9.3 has a buffer over-read in print-icmp6.c.	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4995
2284	CVE-2018-14881	High	CRITICAL	The BGP parser in tcpdump before 4.9.3 has a buffer over-read in print-bgp.c:bgp_capabilities_print() (BGP_CAPCODE_RESTART).	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4994
2285	CVE-2018-14880	High	CRITICAL	The OSPFv3 parser in tcpdump before 4.9.3 has a buffer over-read in print-ospf6.c:ospf6_print_lshdr().	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4993
2286	CVE-2018-14879	High	CRITICAL	The command-line argument parser in tcpdump before 4.9.3 has a buffer overflow in tcpdump.c:get_next_file().	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4992
2287	CVE-2018-14851	MEDIUM	MEDIUM	exif_process_IFD_in_MAKERNOTE in ext/exif/exif.c in PHP before 5.6.37, 7.0.x before 7.0.31, 7.1.x before 7.1.20, and 7.2.x before 7.2.8 allows remote attackers to cause a denial of service (out-of-bounds read and application crash) via a crafted JPEG file.	php	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4534
2288	CVE-2018-14734	MEDIUM	HIGH	drivers/infiniband/core/ucma.c in the Linux kernel through 4.17.11 allows ucma_leave_multicast to access a certain data structure after a cleanup step in ucma_process_join, which allows attackers to cause a denial of service (use-after-free).	linux	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4465
2289	CVE-2018-14682	MEDIUM	HIGH	An issue was discovered in mspack/chmd.c in libmspack before 0.7alpha. There is an off-by-one error in the TOLOWER() macro for CHM decompression.	libmspack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4374
2290	CVE-2018-14681	MEDIUM	HIGH	An issue was discovered in kwajd_read_headers in mspack/kwajd.c in libmspack before 0.7alpha. Bad KWAJ file header extensions could cause a one or two byte overwrite.	libmspack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4379
2291	CVE-2018-14680	MEDIUM	MEDIUM	An issue was discovered in mspack/chmd.c in libmspack before 0.7alpha. It does not reject blank CHM filenames.	libmspack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4414

	A	B	C	D	E	F	G	H	I	J	K	L	M
2292	CVE-2018-14679	MEDIUM	MEDIUM	An issue was discovered in mspack/chmd.c in libmspack before 0.7alpha. There is an off-by-one error in the CHM PMGI/PMGL chunk number validity checks, which could lead to denial of service (uninitialized data dereference and application crash).	libmspack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4394
2293	CVE-2018-14678	HIGH	HIGH	An issue was discovered in the Linux kernel through 4.17.11, as used in Xen through 4.11.x. The xen_failsafe_callback entry point in arch/x86/entry/entry_64.S does not properly maintain RBX, which allows local users to cause a denial of service (uninitialized memory usage and system crash). Within Xen, 64-bit x86 PV Linux guest OS users can trigger a guest OS crash or possibly gain privileges.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4375
2294	CVE-2018-14665	HIGH	MEDIUM	A flaw was found in xorg-x11-server before 1.20.3. An incorrect permission check for -modulepath and -logfile options when starting Xorg. X server allows unprivileged users with the ability to log in to the system via physical console to escalate their privileges and run arbitrary code under root privileges.	xserver-xorg	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	Not vulnerable	Vulnerable	LIN10-4916
2295	CVE-2018-14662	LOW	MEDIUM	The Ceph documentation states that clients should use "allow r" mon caps[1][2][3], which will grant full read access to all config-keys stored in the monitor -- including the LUKS encryption keys for OSD.	ceph	Unchanged	8.0.0.30	9.0.0.20	Won't Fix	10.18.44.4	Not vulnerable	Not vulnerable	LIN1018-3398
2296	CVE-2018-14661	MEDIUM	MEDIUM	It was found that usage of snprintf function in feature/locks translator of glusterfs server 3.8.4, as shipped with Red Hat Gluster Storage, was vulnerable to a format string attack. A remote, authenticated attacker could use this flaw to cause remote denial of service.	glusterfs	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.4	Not vulnerable	Not vulnerable	LIN10-5019
2297	CVE-2018-14660	MEDIUM	MEDIUM	A flaw was found in glusterfs server through versions 4.1.4 and 3.1.2 which allowed repeated usage of GF_META_LOCK_KEY xattr. A remote, authenticated attacker could use this flaw to create multiple locks for single inode by using setxattr repetitively resulting in memory exhaustion of glusterfs server node.	glusterfs	Unchanged	Not vulnerable	9.0.0.19	10.17.41.13	10.18.44.4	Not vulnerable	Not vulnerable	LIN10-4982
2298	CVE-2018-14659	MEDIUM	MEDIUM	The Gluster file system through versions 4.1.4 and 3.1.2 is vulnerable to a denial of service attack via use of the 'GF_XATTR_IOSTATS_DUMP_KEY' xattr. A remote, authenticated attacker could exploit this by mounting a Gluster volume and repeatedly calling 'setxattr(2)' to trigger a state dump and create an arbitrary number of files in the server's runtime directory.	glusterfs	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.4	Not vulnerable	Not vulnerable	LIN10-5029
2299	CVE-2018-14656	LOW	MEDIUM	A missing address check in the callers of the show_opcodes() in the Linux kernel allows an attacker to dump the kernel memory at an arbitrary kernel address into the dmesg log.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4784
2300	CVE-2018-14654	HIGH	MEDIUM	The Gluster file system through version 4.1.4 is vulnerable to abuse of the 'features/index' translator. A remote attacker with access to mount volumes could exploit this via the 'GF_XATTROP_ENTRY_IN_KEY' xattrop to create arbitrary, empty files on the target server.	glusterfs	Unchanged	Not vulnerable	9.0.0.19	10.17.41.13	10.18.44.4	Not vulnerable	Not vulnerable	LIN10-5028
2301	CVE-2018-14653	MEDIUM	HIGH	The Gluster file system through versions 4.1.4 and 3.12 is vulnerable to a heap-based buffer overflow in the '__server_getspec' function via the 'gf_getspec_req' RPC message. A remote authenticated attacker could exploit this to cause a denial of service or other potential unspecified impact.	glusterfs	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.4	Not vulnerable	Not vulnerable	LIN10-5027
2302	CVE-2018-14651	MEDIUM	HIGH	It was found that the fix for CVE-2018-10927, CVE-2018-10928, CVE-2018-10929, CVE-2018-10930, and CVE-2018-10926 was incomplete. A remote, authenticated attacker could use one of these flaws to execute arbitrary code, create arbitrary files, or cause denial of service on glusterfs server nodes via symlinks to relative paths.	glusterfs	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.4	Not vulnerable	Not vulnerable	LIN10-5001
2303	CVE-2018-14647	MEDIUM	HIGH	Python's elementtree C accelerator failed to initialise Expat's hash salt during initialization. This could make it easy to conduct denial of service attacks against Expat by constructing an XML document that would cause pathological hash collisions in Expat's internal data structures, consuming large amounts CPU and RAM. Python 3.8, 3.7, 3.6, 3.5, 3.4, 2.7 are believed to be vulnerable.	python	Unchanged	8.0.0.28	9.0.0.18	10.17.41.13	10.18.44.9	Not vulnerable	Vulnerable	LIN10-4821
2304	CVE-2018-14646	MEDIUM	MEDIUM	The Linux kernel before 4.15-rc8 was found to be vulnerable to a NULL pointer dereference bug in the __netlink_ns_capable() function in the net/netlink/af_netlink.c file. A local attacker could exploit this when a net namespace with a netnsid is assigned to cause a kernel panic and a denial of service.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-5071
2305	CVE-2018-14641	HIGH	MEDIUM	A security flaw was found in the ip_frag_reasm() function in net/ipv4/ip_fragment.c in the Linux kernel from 4.19-rc1 to 4.19-rc3 inclusive, which can cause a later system crash in ip_do_fragment(). With certain non-default, but non-rare, configuration of a victim host, an attacker can trigger this crash remotely, thus leading to a remote denial-of-service.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4811
2306	CVE-2018-14634	HIGH	HIGH	An integer overflow flaw was found in the Linux kernel's create_elf_tables() function. An unprivileged local user with access to SUID (or otherwise privileged) binary could use this flaw to escalate their privileges on the system. Kernel versions 2.6.x, 3.10.x and 4.14.x are believed to be vulnerable.	linux	Unchanged	8.0.0.29	9.0.0.20	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4824

	A	B	C	D	E	F	G	H	I	J	K	L	M
2307	CVE-2018-14633	HIGH	HIGH	A security flaw was found in the chap_server_compute_md5() function in the ISCSI target code in the Linux kernel in a way an authentication request from an ISCSI initiator is processed. An unauthenticated remote attacker can cause a stack buffer overflow and smash up to 17 bytes of the stack. The attack requires the iSCSI target to be enabled on the victim host. Depending on how the target's code was built (i.e. depending on a compiler, compile flags and hardware architecture) an attack may lead to a system crash and thus to a denial-of-service or possibly to a non-authorized access to data exported by an iSCSI target. Due to the nature of the flaw, privilege escalation cannot be fully ruled out, although we believe it is highly unlikely. Kernel versions 4.18.x, 4.14.x and 3.10.x are believed to be vulnerable.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4775
2308	CVE-2018-14629	MEDIUM	MEDIUM	A denial of service vulnerability was discovered in Samba's LDAP server before versions 4.7.12, 4.8.7, and 4.9.3. A CNAME loop could lead to infinite recursion in the server. An unprivileged local attacker could create such an entry, leading to denial of service.	samba	Unchanged	Vulnerable	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN1018-3276
2309	CVE-2018-14627	MEDIUM	MEDIUM	The IIOP OpenJDK Subsystem in WildFly before version 14.0.0 does not honour configuration when SSL transport is required. Servers before this version that are configured with the following setting allow clients to create plaintext connections: <transport-config confidentiality=required trust-in-target=supported/>	wildfly	Unchanged	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9830
2310	CVE-2018-14625	MEDIUM	HIGH	A flaw was found in the Linux Kernel where an attacker may be able to have an uncontrolled read to kernel-memory from within a vm guest. A race condition between connect() and close() function may allow an attacker using the AF_VSOCK protocol to gather a 4 byte information leak or possibly intercept or corrupt AF_VSOCK messages destined to other clients.	linux	Unchanged	Not vulnerable	9.0.0.22	10.17.41.18	10.18.44.9	Not vulnerable	Not vulnerable	LIN10-4677
2311	CVE-2018-14622	MEDIUM	HIGH	A flaw was found in libtirpc. The return value of makefd_xprt was used without checking for NULL in svc_vc.c, leading to a null pointer dereference / segfault if the maximum number of available file descriptors was exhausted.	libtirpc	Unchanged	8.0.0.28	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4622
2312	CVE-2018-14621	HIGH	HIGH	A flaw was found in libtirpc before version 1.0.2-rc2. With the port to poll, and endless loop can be created when running out of file descriptors.	libtirpc	Unchanged	Not vulnerable	9.0.0.18	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4617
2313	CVE-2018-14619	HIGH	HIGH	A flaw was found in the crypto subsystem of the Linux kernel. The "null skcipher" was being by dropped in the wrong place -- when each af_alg_ctx was freed instead of when the aead_tfm was freed. This can cause the null skcipher to be freed while it is still in use. This may grant a local user to be able to crash the machine and possible corrupt memory leading to privilege escalation.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4613
2314	CVE-2018-14618	HIGH	CRITICAL	curl before version 7.61.1 is vulnerable to a buffer overrun in the NTLM authentication code. The internal function Curl_ntlm_core_mk_nt_hash multiplies the length of the password by two (SUM) to figure out how large temporary storage area to allocate from the heap. The length value is then subsequently used to iterate over the password and generate output into the allocated storage buffer. On systems with a 32 bit size_t, the math to calculate SUM triggers an integer overflow when the password length exceeds 2GB (2^31 bytes). This integer overflow usually causes a very small buffer to actually get allocated instead of the intended very huge one, making the use of that buffer end up in a heap buffer overflow. (This bug is almost identical to CVE-2017-8816.)	curl	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4713
2315	CVE-2018-14617	HIGH	MEDIUM	An issue was discovered in the Linux kernel through 4.17.10. There is a NULL pointer dereference and panic in hfsplus_lookup() in fs/hfsplus/dir.c when opening a file (that is purportedly a hard link) in an hfs+ filesystem that has malformed catalog data, and is mounted read-only without a metadata directory.	linux	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4437
2316	CVE-2018-14616	HIGH	MEDIUM	An issue was discovered in the Linux kernel through 4.17.10. There is a NULL pointer dereference in fscrypt_do_page_crypto() in fs/crypto/crypto.c when operating on a file in a corrupted f2fs image.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4447
2317	CVE-2018-14615	HIGH	MEDIUM	An issue was discovered in the Linux kernel through 4.17.10. There is a buffer overflow in truncate_inline_inode() in fs/f2fs/inline.c when umounting an f2fs image, because a length value may be negative.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4444
2318	CVE-2018-14614	HIGH	MEDIUM	An issue was discovered in the Linux kernel through 4.17.10. There is an out-of-bounds access in __remove_dirty_segment() in fs/f2fs/segment.c when mounting an f2fs image.	linux	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4434
2319	CVE-2018-14613	HIGH	MEDIUM	An issue was discovered in the Linux kernel through 4.17.10. There is an invalid pointer dereference in io_ctl_map_page() when mounting and operating a crafted btrfs image, because of a lack of block group item validation in check_leaf_item in fs/btrfs/tree-checker.c.	linux	Unchanged	8.0.0.31	Vulnerable	10.17.41.19	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4442
2320	CVE-2018-14612	HIGH	MEDIUM	An issue was discovered in the Linux kernel through 4.17.10. There is an invalid pointer dereference in btrfs_root_node() when mounting a crafted btrfs image, because of a lack of chunk block group mapping validation in btrfs_read_block_groups in fs/btrfs/extent-tree.c, and a lack of empty-tree checks in check_leaf in fs/btrfs/tree-checker.c.	linux	Unchanged	Not vulnerable	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4443
2321	CVE-2018-14611	HIGH	MEDIUM	An issue was discovered in the Linux kernel through 4.17.10. There is a use-after-free in try_merge_free_space() when mounting a crafted btrfs image, because of a lack of chunk type flag checks in btrfs_check_chunk_valid in fs/btrfs/volumes.c.	linux	Unchanged	8.0.0.29	9.0.0.20	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4421

	A	B	C	D	E	F	G	H	I	J	K	L	M
2322	CVE-2018-14610	HIGH	MEDIUM	An issue was discovered in the Linux kernel through 4.17.10. There is out-of-bounds access in write_extent_buffer() when mounting and operating a crafted btrfs image, because of a lack of verification that each block group has a corresponding chunk at mount time, within btrfs_read_block_groups in fs/btrfs/extent-tree.c.	linux	Unchanged	Not vulnerable	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4384
2323	CVE-2018-14609	HIGH	MEDIUM	An issue was discovered in the Linux kernel through 4.17.10. There is an invalid pointer dereference in __del_reloc_root() in fs/btrfs/relocation.c when mounting a crafted btrfs image, related to removing reloc rb_trees when reloc control has not been initialized.	linux	Unchanged	8.0.0.29	9.0.0.20	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4446
2324	CVE-2018-14600	HIGH	CRITICAL	An issue was discovered in libX11 through 1.6.5. The function XListExtensions in ListExt.c interprets a variable as signed instead of unsigned, resulting in an out-of-bounds write (of up to 128 bytes), leading to DoS or remote code execution.	libx11	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4641
2325	CVE-2018-14599	HIGH	CRITICAL	An issue was discovered in libX11 through 1.6.5. The function XListExtensions in ListExt.c is vulnerable to an off-by-one error caused by malicious server responses, leading to DoS or possibly unspecified other impact.	libx11	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4629
2326	CVE-2018-14598	MEDIUM	HIGH	An issue was discovered in XListExtensions in ListExt.c in libX11 through 1.6.5. A malicious server can send a reply in which the first string overflows, causing a variable to be set to NULL that will be freed later on, leading to DoS (segmentation fault).	libx11	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4631
2327	CVE-2018-14567	MEDIUM	MEDIUM	Found a denial of service parsing a specially crafted xml file in libxml2 if liblzma-dev package is enabled.	libxml2	Unchanged	8.0.0.27	9.0.0.18	10.17.41.10	10.18.44.1	10.19.45.1	Not vulnerable	LIN10-4486
2328	CVE-2018-14553	MEDIUM	HIGH	gdImageClone in gd.c in libgd 2.1.0-rc2 through 2.2.5 has a NULL pointer dereference allowing attackers to crash an application via a specific function call sequence. Only affects PHP when linked with an external libgd (not bundled).	gd	Updated	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.5	Not vulnerable	LIN1019-4035
2329	CVE-2018-14551	HIGH	CRITICAL	The ReadMATImageV4 function in coders/mat.c in ImageMagick 7.0.8-7 uses an uninitialized variable, leading to memory corruption.	imagemagick	Unchanged	8.0.0.27	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4419
2330	CVE-2018-14550	MEDIUM	HIGH	Stack-based buffer overflow in contrib/pngminus/pnm2png.c:get_token() function in libpng was found, possibly leading to arbitrary code execution when processing untrusted input.	libpng	Unchanged	8.0.0.31	Investigate	10.17.41.17	10.18.44.8	Not vulnerable	Not vulnerable	LIN1018-4176
2331	CVE-2018-14526	LOW	MEDIUM	An issue was discovered in rsn_supp/wpa.c in wpa_supplicant 2.0 through 2.6. Under certain conditions, the integrity of EAPOL-Key messages is not checked, leading to a decryption oracle. An attacker within range of the Access Point and client can abuse the vulnerability to recover sensitive information.	wpa-supplicant	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4532
2332	CVE-2018-14498	Medium	MEDIUM	get_8bit_row in rdbmp.c in libjpeg-turbo through 1.5.90 and MozJPEG through 3.3.1 allows attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted 8-bit BMP in which one or more of the color indices is out of range for the number of palette entries.	libjpeg-turbo	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3785
2333	CVE-2018-14470	High	CRITICAL	The Babel parser in tcpdump before 4.9.3 has a buffer over-read in print-babel.c:babel_print_v2().	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4991
2334	CVE-2018-14469	High	CRITICAL	The IKEv1 parser in tcpdump before 4.9.3 has a buffer over-read in print-isakmp.c:ikev1_n_print().	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4990
2335	CVE-2018-14468	High	CRITICAL	The FRF.16 parser in tcpdump before 4.9.3 has a buffer over-read in print-fr.c:mfr_print().	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4989
2336	CVE-2018-14467	High	CRITICAL	The BGP parser in tcpdump before 4.9.3 has a buffer over-read in print-bgp.c:bgp_capabilities_print() (BGP_CAPCODE_MP).	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4988
2337	CVE-2018-14466	High	CRITICAL	The Rx parser in tcpdump before 4.9.3 has a buffer over-read in print-rx.c:rx_cache_find() and rx_cache_insert().	tcpdump	Unchanged	Not vulnerable	Not vulnerable	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4987
2338	CVE-2018-14465	High	CRITICAL	The RSVP parser in tcpdump before 4.9.3 has a buffer over-read in print-rsvp.c:rsvp_obj_print().	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4986
2339	CVE-2018-14464	High	CRITICAL	The LMP parser in tcpdump before 4.9.3 has a buffer over-read in print-lmp.c:lmp_print_data_link_subobjs().	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4985
2340	CVE-2018-14463	High	CRITICAL	The VRRP parser in tcpdump before 4.9.3 has a buffer over-read in print-vrrp.c:vrrp_print().	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4984
2341	CVE-2018-14462	High	CRITICAL	The ICMP parser in tcpdump before 4.9.3 has a buffer over-read in print-icmp.c:icmp_print().	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4983
2342	CVE-2018-14461	High	CRITICAL	The LDP parser in tcpdump before 4.9.3 has a buffer over-read in print-ldp.c:ldp_tlv_print().	tcpdump	Unchanged	8.0.0.31	9.0.0.24	10.17.41.19	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4982
2343	CVE-2018-14438	MEDIUM	HIGH	In Wireshark through 2.6.2, the create_app_running_mutex function in wsutil/file_util.c calls SetSecurityDescriptorDacl to set a NULL DACL, which allows attackers to modify the access control arbitrarily.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4409
2344	CVE-2018-14437	MEDIUM	MEDIUM	ImageMagick 7.0.8-4 has a memory leak in parse8BIM in coders/meta.c.	imagemagick	Unchanged	8.0.0.27	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4393
2345	CVE-2018-14436	MEDIUM	MEDIUM	ImageMagick 7.0.8-4 has a memory leak in ReadMIFFImage in coders/miff.c.	imagemagick	Unchanged	8.0.0.27	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4462
2346	CVE-2018-14435	MEDIUM	MEDIUM	ImageMagick 7.0.8-4 has a memory leak in DecodeImage in coders/pcd.c.	imagemagick	Unchanged	8.0.0.27	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4448
2347	CVE-2018-14434	MEDIUM	MEDIUM	ImageMagick 7.0.8-4 has a memory leak for a colormap in WriteMPCImage in coders/mpc.c.	imagemagick	Unchanged	8.0.0.27	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4431
2348	CVE-2018-14424	MEDIUM	HIGH	The daemon in GDM through 3.29.1 does not properly unexport display objects from its D-Bus interface when they are destroyed, which allows a local attacker to trigger a use-after-free via a specially crafted sequence of D-Bus method calls, resulting in a denial of service or potential code execution.	gdm	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-7322
2349	CVE-2018-14423	MEDIUM	HIGH	Division-by-zero vulnerabilities in the functions pi_next_pcrl, pi_next_cprl, and pi_next_rpcl in lib/openjp3d/pi.c in OpenJPEG through 2.3.0 allow remote attackers to cause a denial of service (application crash).	openjpeg	Unchanged	Won't Fix	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4645

	A	B	C	D	E	F	G	H	I	J	K	L	M
2350	CVE-2018-14404	MEDIUM	HIGH	A NULL pointer dereference vulnerability exists in the xpath.c:xmlXPathCompOpEval() function of libxml2 through 2.9.8 when parsing an invalid XPath expression in the XPATH_OP_AND or XPATH_OP_OR case. Applications processing untrusted XSL format inputs with the use of the libxml2 library may be vulnerable to a denial of service attack due to a crash of the application.	libxml2	Unchanged	8.0.0.27	9.0.0.18	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4439
2351	CVE-2018-14395	MEDIUM	MEDIUM	libavformat/movenc.c in FFmpeg before 4.0.2 allows attackers to cause a denial of service (application crash caused by a divide-by-zero error) with a user crafted audio file when converting to the MOV audio format.	ffmpeg	Unchanged	Won't Fix	9.0.0.18	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4423
2352	CVE-2018-14394	MEDIUM	MEDIUM	libavformat/movenc.c in FFmpeg before 4.0.2 allows attackers to cause a denial of service (application crash caused by a divide-by-zero error) with a user crafted Waveform audio file.	ffmpeg	Unchanged	Won't Fix	9.0.0.18	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4390
2353	CVE-2018-14378			An issue was discovered in LibTIFF 4.0.9. A buffer overflow can occur via an invalid or empty tif argument to TIFFWriteBufferSetup in tif_write.c, and it can be exploited (at a minimum) via the following high-level library API function: TIFFWriteTile.	tiff	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4396
2354	CVE-2018-14375			An issue was discovered in LibTIFF 4.0.9. A buffer overflow vulnerability can occur via an invalid or empty tif argument to TIFFRGBAImageOK in tif_getimage.c, and it can be exploited (at a minimum) via the following high-level library API functions: TIFFReadRGBAImage, TIFFRGBAImageOK, and TIFFRGBAImageBegin.	tiff	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4412
2355	CVE-2018-14374			An issue was discovered in LibTIFF 4.0.9. A buffer overflow can occur via an empty fmt argument to unixErrorHandler in tif_unix.c, and it can be exploited (at a minimum) via the following high-level library API functions: TIFFClientOpen, TIFFFdOpen, TIFFRawStripSize, TIFFCheckTile, TIFFComputeStrip, TIFFReadRawTile, TIFFUnRegisterCODEC, and TIFFWriteEncodedTile.	tiff	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4370
2356	CVE-2018-14373			An issue was discovered in LibTIFF 4.0.9. In TIFFFindField in tif_dirinfo.c, the structure tif is being dereferenced without first checking that the structure is not empty and has the requested fields (tif_foundfield). In the call sequences following from the affected library functions (TIFFVGetField, TIFFVGetFieldDefaulted, TIFFVStripSize, TIFFScanlineSize, TIFFTileSize, TIFFGetFieldDefaulted, and TIFFGetField), this sanitization of the tif structure is never being done and, hence, using them with an invalid or empty tif structure will trigger a buffer overflow, leading to a crash.	tiff	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4449
2357	CVE-2018-14370	MEDIUM	HIGH	In Wireshark 2.6.0 to 2.6.1 and 2.4.0 to 2.4.7, the IEEE 802.11 protocol dissector could crash. This was addressed in epan/crypt/airpdcap.c via bounds checking that prevents a buffer over-read.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4428
2358	CVE-2018-14369	MEDIUM	HIGH	In Wireshark 2.6.0 to 2.6.1, 2.4.0 to 2.4.7, and 2.2.0 to 2.2.15, the HTTP2 dissector could crash. This was addressed in epan/dissectors/packet-http2.c by verifying that header data was found before proceeding to header decompression.	wireshark	Unchanged	8.0.0.27	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4435
2359	CVE-2018-14368	HIGH	HIGH	In Wireshark 2.6.0 to 2.6.1, 2.4.0 to 2.4.7, and 2.2.0 to 2.2.15, the Bazaar protocol dissector could go into an infinite loop. This was addressed in epan/dissectors/packet-bzr.c by properly handling items that are too long.	wireshark	Unchanged	8.0.0.27	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4432
2360	CVE-2018-14367	MEDIUM	HIGH	In Wireshark 2.6.0 to 2.6.1 and 2.4.0 to 2.4.7, the CoAP protocol dissector could crash. This was addressed in epan/dissectors/packet-coap.c by properly checking for a NULL condition.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4380
2361	CVE-2018-14362	HIGH	CRITICAL	An issue was discovered in Mutt before 1.10.1 and NeoMutt before 2018-07-16. pop.c does not forbid characters that may have unsafe interaction with message-cache pathnames, as demonstrated by a '/' character.	mutt	Unchanged	8.0.0.27	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9612
2362	CVE-2018-14359	HIGH	CRITICAL	An issue was discovered in Mutt before 1.10.1 and NeoMutt before 2018-07-16. They have a buffer overflow via base64 data.	mutt	Unchanged	8.0.0.27	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9581
2363	CVE-2018-14358	HIGH	CRITICAL	An issue was discovered in Mutt before 1.10.1 and NeoMutt before 2018-07-16. imap/message.c has a stack-based buffer overflow for a FETCH response with a long RFC822.SIZE field.	mutt	Unchanged	8.0.0.27	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9531
2364	CVE-2018-14357	HIGH	CRITICAL	An issue was discovered in Mutt before 1.10.1 and NeoMutt before 2018-07-16. They allow remote IMAP servers to execute arbitrary commands via backquote characters, related to the mailboxes command associated with an automatic subscription.	mutt	Unchanged	8.0.0.27	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9497
2365	CVE-2018-14356	HIGH	CRITICAL	An issue was discovered in Mutt before 1.10.1 and NeoMutt before 2018-07-16. pop.c mishandles a zero-length UID.	mutt	Unchanged	8.0.0.27	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9538
2366	CVE-2018-14355	MEDIUM	MEDIUM	An issue was discovered in Mutt before 1.10.1 and NeoMutt before 2018-07-16. imap/util.c mishandles .. directory traversal in a mailbox name.	mutt	Unchanged	8.0.0.27	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9519
2367	CVE-2018-14354	HIGH	CRITICAL	An issue was discovered in Mutt before 1.10.1 and NeoMutt before 2018-07-16. They allow remote IMAP servers to execute arbitrary commands via backquote characters, related to the mailboxes command associated with a manual subscription or unsubscription.	mutt	Unchanged	8.0.0.27	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9514
2368	CVE-2018-14353	HIGH	CRITICAL	An issue was discovered in Mutt before 1.10.1 and NeoMutt before 2018-07-16. imap_quote_string in imap/util.c has an integer underflow.	mutt	Unchanged	8.0.0.27	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9537
2369	CVE-2018-14352	HIGH	CRITICAL	An issue was discovered in Mutt before 1.10.1 and NeoMutt before 2018-07-16. imap_quote_string in imap/util.c does not leave room for quote characters, leading to a stack-based buffer overflow.	mutt	Unchanged	8.0.0.27	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9595
2370	CVE-2018-14351	HIGH	CRITICAL	An issue was discovered in Mutt before 1.10.1 and NeoMutt before 2018-07-16. imap/command.c mishandles a long IMAP status mailbox literal count size.	mutt	Unchanged	8.0.0.27	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9565

	A	B	C	D	E	F	G	H	I	J	K	L	M
2371	CVE-2018-14350	HIGH	CRITICAL	An issue was discovered in Mutt before 1.10.1 and NeoMutt before 2018-07-16. imap/message.c has a stack-based buffer overflow for a FETCH response with a long INTERNALDATE field.	mutt	Unchanged	8.0.0.27	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9602
2372	CVE-2018-14349	HIGH	CRITICAL	An issue was discovered in Mutt before 1.10.1 and NeoMutt before 2018-07-16. imap/command.c mishandles a NO response without a message.	mutt	Unchanged	8.0.0.27	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9521
2373	CVE-2018-14348	MEDIUM	HIGH	libcgroup up to and including 0.41 creates /var/log/cgred with mode 0666 regardless of the configured umask, leading to disclosure of information.	libcgroup	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	10.18.44.1	10.19.45.1	Not vulnerable	LIN10-4547
2374	CVE-2018-14344	MEDIUM	HIGH	In Wireshark 2.6.0 to 2.6.1, 2.4.0 to 2.4.7, and 2.2.0 to 2.2.15, the ISMP dissector could crash. This was addressed in epan/dissectors/packet-ismp.c by validating the IPX address length to avoid a buffer over-read.	wireshark	Unchanged	Investigate	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4456
2375	CVE-2018-14343	MEDIUM	HIGH	In Wireshark 2.6.0 to 2.6.1, 2.4.0 to 2.4.7, and 2.2.0 to 2.2.15, the ASN.1 BER dissector crash. This was addressed in epan/dissectors/packet-ber.c by ensuring that length values do not exceed the maximum signed integer.	wireshark	Unchanged	8.0.0.27	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4425

This was addressed in epan/dissectors/packet-bgp.c by validating Path Attribute lengths.	wireshark	Unchanged	8.0.0.28	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4464
2377	CVE-2018-14341	HIGH	HIGH	In Wireshark 2.6.0 to 2.6.1, 2.4.0 to 2.4.7, and 2.2.0 to 2.2.15, the DICOM dissector could go into a large or infinite loop. This was addressed in epan/dissectors/packet-dcm.c by preventing an offset overflow.	wireshark	Unchanged	8.0.0.27	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4461
2378	CVE-2018-14340	MEDIUM	HIGH	In Wireshark 2.6.0 to 2.6.1, 2.4.0 to 2.4.7, and 2.2.0 to 2.2.15, dissectors that support zlib decompression could crash. This was addressed in epan/tvbuff_zlib.c by rejecting negative lengths to avoid a buffer over-read.	wireshark	Unchanged	8.0.0.27	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4413
2379	CVE-2018-14339	MEDIUM	HIGH	In Wireshark 2.6.0 to 2.6.1, 2.4.0 to 2.4.7, and 2.2.0 to 2.2.15, the MMSE dissector could go into an infinite loop. This was addressed in epan/proto.c by adding offset and length validation.	wireshark	Unchanged	8.0.0.27	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4378
2380	CVE-2018-14056	MEDIUM	HIGH	ZNC before 1.7.1-rc1 is prone to a path traversal flaw via ../ in a web skin name to access files outside of the intended skins directories.	znc	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4330
2381	CVE-2018-14055	MEDIUM	MEDIUM	ZNC before 1.7.1-rc1 does not properly validate untrusted lines coming from the network, allowing a non-admin user to escalate his privilege and inject rogue values into znc.conf.	znc	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4296
2382	CVE-2018-14048	MEDIUM	MEDIUM	An issue has been found in libpng 1.6.34. It is a SEGV in the function png_free_data in png.c, related to the recommended error handling for png_read_image.	libpng	Unchanged	Vulnerable	Vulnerable	Vulnerable	Investigate	Not vulnerable	Not vulnerable	LIN10-4292
2383	CVE-2018-13988	MEDIUM	MEDIUM	Poppler through 0.62 contains a Buffer Overflow vulnerability due to an incorrect memory access that is not mapped in its memory space, as demonstrated by pdfunite. This can result in memory corruption and denial of service. This may be exploitable when a victim opens a specially crafted PDF file.	poppler	Unchanged	Won't Fix	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4383
2384	CVE-2018-13785	MEDIUM	MEDIUM	In libpng 1.6.34, a wrong calculation of row_factor in the png_check_chunk_length function (pngrutil.c) may trigger an integer overflow and resultant divide-by-zero while processing a crafted PNG file, leading to a denial of service.	libpng	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4308
2385	CVE-2018-13458	MEDIUM	MEDIUM	qh_core in Nagios Core 4.4.1 and earlier is prone to a NULL pointer dereference vulnerability, which allows attackers to cause a local denial-of-service condition by sending a crafted payload to the listening UNIX socket.	nagios-core	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4313
2386	CVE-2018-13457	MEDIUM	MEDIUM	qh_echo in Nagios Core 4.4.1 and earlier is prone to a NULL pointer dereference vulnerability, which allows attackers to cause a local denial-of-service condition by sending a crafted payload to the listening UNIX socket.	nagios-core	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4286
2387	CVE-2018-13441	LOW	MEDIUM	qh_help in Nagios Core version 4.4.1 and earlier is prone to a NULL pointer dereference vulnerability, which allows attacker to cause a local denial-of-service condition by sending a crafted payload to the listening UNIX socket.	nagios-core	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4318
2388	CVE-2018-13440	MEDIUM	MEDIUM	The audiofile Audio File Library 0.3.6 has a NULL pointer dereference bug in ModuleState::setup in modules/ModuleState.cpp, which allows an attacker to cause a denial of service via a crafted caf file, as demonstrated by sfconvert.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4327
2389	CVE-2018-13420	MEDIUM	HIGH	** DISPUTED ** Google gperftools 2.7 has a memory leak in malloc_extension.cc, related to MallocExtension::Register and InitModule. NOTE: the software maintainer indicates that this is not a bug; it is only a false-positive report from the LeakSanitizer program.	gperftools	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Investigate	LIN1019-3673
2390	CVE-2018-13419	MEDIUM	HIGH	An issue has been found in libsndfile 1.0.28. There is a memory leak in psf_allocate in common.c, as demonstrated by sndfile-convert.	libsndfile1	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4323
2391	CVE-2018-13406	HIGH	HIGH	An integer overflow in the uvesafb_setcmap function in drivers/video/fbdev/uvesafb.c in the Linux kernel before 4.17.4 could result in local attackers being able to crash the kernel or potentially elevate privileges because kmalloc_array is not used.	linux	Unchanged	8.0.0.27	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4291
2392	CVE-2018-13405	MEDIUM	HIGH	The inode_init_owner function in fs/inode.c in the Linux kernel through 4.17.4 allows local users to create files with an unintended group ownership, in a scenario where a directory is SGID to a certain group and is writable by a user who is not a member of that group. Here, the non-member can trigger creation of a plain file whose group ownership is that group. The intended behavior was that the non-member can trigger creation of a directory (but not a plain file) whose group ownership is that group.	linux	Unchanged	8.0.0.27	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4274
2393	CVE-2018-13348	MEDIUM	HIGH	The mpatch_decode function in mpatch.c in Mercurial before 4.6.1 mishandles certain situations where there should be at least 12 bytes remaining after the current position in the patch data, but actually are not, aka OVE-20180430-0001.	mercurial	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4319
2394	CVE-2018-13347	HIGH	CRITICAL	mpatch.c in Mercurial before 4.6.1 mishandles integer addition and subtraction, aka OVE-20180430-0002.	mercurial	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4317

	A	B	C	D	E	F	G	H	I	J	K	L	M
2395	CVE-2018-13346	MEDIUM	HIGH	The mpatch_apply function in mpatch.c in Mercurial before 4.6.1 incorrectly proceeds in cases where the fragment start is past the end of the original data, aka OVE-20180430-0004.	mercurial	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4307
2396	CVE-2018-1333	MEDIUM	HIGH	By specially crafting HTTP/2 requests, workers would be allocated 60 seconds longer than necessary, leading to worker exhaustion and a denial of service. Fixed in Apache HTTP Server 2.4.34 (Affected 2.4.18-2.4.30,2.4.33).	apache	Unchanged	Not vulnerable	Vulnerable	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4389
2397	CVE-2018-13305	MEDIUM	HIGH	In FFmpeg 4.0.1, due to a missing check for negative values of the mquant variable, the vc1_put_blocks_clamped function in libavcodec/vc1_block.c may trigger an out-of-array access while converting a crafted AVI file to MPEG4, leading to an information disclosure or a denial of service.	ffmpeg	Unchanged	Won't Fix	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4293
2398	CVE-2018-13304	MEDIUM	MEDIUM	In libavcodec in FFmpeg 4.0.1, improper maintenance of the consistency between the context profile field and studio_profile in libavcodec may trigger an assertion failure while converting a crafted AVI file to MPEG4, leading to a denial of service, related to error_resilience.c, h263dec.c, and mpeg4videodec.c.	ffmpeg	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4324
2399	CVE-2018-13303	MEDIUM	MEDIUM	In FFmpeg 4.0.1, a missing check for failure of a call to init_get_bits8() in the avpriv_ac3_parse_header function in libavcodec/ac3_parser.c may trigger a NULL pointer dereference while converting a crafted AVI file to MPEG4, leading to a denial of service.	ffmpeg	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4279
2400	CVE-2018-13302	MEDIUM	HIGH	In FFmpeg 4.0.1, improper handling of frame types (other than EAC3_FRAME_TYPE_INDEPENDENT) that have multiple independent substreams in the handle_eac3 function in libavformat/movenc.c may trigger an out-of-array access while converting a crafted AVI file to MPEG4, leading to a denial of service or possibly unspecified other impact.	ffmpeg	Unchanged	Won't Fix	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4321
2401	CVE-2018-13301	MEDIUM	MEDIUM	In FFmpeg 4.0.1, due to a missing check of a profile value before setting it, the ff_mpeg4_decode_picture_header function in libavcodec/mpeg4videodec.c may trigger a NULL pointer dereference while converting a crafted AVI file to MPEG4, leading to a denial of service.	ffmpeg	Unchanged	Won't Fix	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4300
2402	CVE-2018-13300	MEDIUM	HIGH	In FFmpeg 4.0.1, an improper argument (AVCodecParameters) passed to the avpriv_request_sample function in the handle_eac3 function in libavformat/movenc.c may trigger an out-of-array read while converting a crafted AVI file to MPEG4, leading to a denial of service and possibly an information disclosure.	ffmpeg	Unchanged	Won't Fix	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4329
2403	CVE-2018-13259	HIGH	CRITICAL	An issue was discovered in zsh before 5.6. Shebang lines exceeding 64 characters were truncated, potentially leading to an execve call to a program name that is a substring of the intended one.	zsh	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4705
2404	CVE-2018-1320	MEDIUM	HIGH	Apache Thrift Java client library versions 0.5.0 through 0.11.0 can bypass SASL negotiation isComplete validation in the org.apache.thrift.transport.TSaslTransport class. An assert used to determine if the SASL handshake had successfully completed could be disabled in production settings making the validation incomplete.	thrift	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3391
2405	CVE-2018-13153	MEDIUM	MEDIUM	In ImageMagick 7.0.8-4, there is a memory leak in the XMagickCommand function in MagickCore/animate.c.	imagemagick	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4297
2406	CVE-2018-13139	MEDIUM	HIGH	A stack-based buffer overflow in psf_memset in common.c in libsndfile 1.0.28 allows remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted audio file. The vulnerability can be triggered by the executable sndfile-deinterleave.	libsndfile1	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.1	10.19.45.1	Not vulnerable	LIN10-4326
2407	CVE-2018-1312	MEDIUM	CRITICAL	In Apache httpd 2.2.0 to 2.4.29, when generating an HTTP Digest authentication challenge, the nonce sent to prevent reply attacks was not correctly generated using a pseudo-random seed. In a cluster of servers using a common Digest authentication configuration, HTTP requests could be replayed across servers by an attacker without detection.	apache	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3671
2408	CVE-2018-13112	MEDIUM	HIGH	get_l2len in common/get.c in Tcpreplay 4.3.0 beta 1 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via crafted packets, as demonstrated by tcpprep.	tcpreplay	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4294
2409	CVE-2018-13100	MEDIUM	MEDIUM	An issue was discovered in fs/f2fs/super.c in the Linux kernel through 4.17.3, which does not properly validate secs_per_zone in a corrupted f2fs image, as demonstrated by a divide-by-zero error.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4282
2410	CVE-2018-13099	MEDIUM	MEDIUM	An issue was discovered in fs/f2fs/inline.c in the Linux kernel through 4.17.3. A denial of service (out-of-bounds memory access and BUG) can occur for a modified f2fs filesystem image in which an inline inode contains an invalid reserved blkaddr.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4328
2411	CVE-2018-13098	MEDIUM	MEDIUM	An issue was discovered in fs/f2fs/inode.c in the Linux kernel through 4.17.3. A denial of service (slab out-of-bounds read and BUG) can occur for a modified f2fs filesystem image in which FI_EXTRA_ATTR is set in an inode.	linux	Unchanged	Not vulnerable	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4320
2412	CVE-2018-13097	MEDIUM	MEDIUM	An issue was discovered in fs/f2fs/super.c in the Linux kernel through 4.17.3. There is an out-of-bounds read or a divide-by-zero error for an incorrect user_block_count in a corrupted f2fs image, leading to a denial of service (BUG).	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4302
2413	CVE-2018-13096	MEDIUM	MEDIUM	An issue was discovered in fs/f2fs/super.c in the Linux kernel through 4.17.3. A denial of service (out-of-bounds memory access and BUG) can occur upon encountering an abnormal bitmap size when mounting a crafted f2fs image.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4301

	A	B	C	D	E	F	G	H	I	J	K	L	M
2414	CVE-2018-13095	MEDIUM	MEDIUM	An issue was discovered in fs/xfs/libxfs/xfs_inode_buf.c in the Linux kernel through 4.17.3. A denial of service (memory corruption and BUG) can occur for a corrupted xfs image upon encountering an inode that is in extent format, but has more extents than fit in the inode fork.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4316
2415	CVE-2018-13094	MEDIUM	MEDIUM	An issue was discovered in fs/xfs/libxfs/xfs_attr_leaf.c in the Linux kernel through 4.17.3. An OOPS may occur for a corrupted xfs image after xfs_da_shrink_inode() is called with a NULL bp.	linux	Unchanged	Vulnerable	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4305
2416	CVE-2018-13093	MEDIUM	MEDIUM	An issue was discovered in fs/xfs/xfs_icache.c in the Linux kernel through 4.17.3. There is a NULL pointer dereference and panic in lookup_slow() on a NULL inode->i_ops pointer when doing pathwalks on a corrupted xfs image. This occurs because of a lack of proper validation that cached inodes are free during allocation.	linux	Unchanged	Vulnerable	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4284
2417	CVE-2018-13053	MEDIUM	HIGH	The alarm_timer_nsleep function in kernel/time/alarmtimer.c in the Linux kernel through 4.17.3 has an integer overflow via a large relative timeout because ktime_add_safe is not used.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4331
2418	CVE-2018-13033	MEDIUM	MEDIUM	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.30, allows remote attackers to cause a denial of service (excessive memory allocation and application crash) via a crafted ELF file, as demonstrated by _bfd_elf_parse_attributes in elf-attrs.c and bfd_malloc in libbfd.c. This can occur during execution of nm.	binutils	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4283
2419	CVE-2018-1303	MEDIUM	HIGH	A specially crafted HTTP request header could have crashed the Apache HTTP Server prior to version 2.4.30 due to an out of bound read while preparing data to be cached in shared memory. It could be used as a Denial of Service attack against users of mod_cache_socache. The vulnerability is considered as low risk since mod_cache_socache is not widely used, mod_cache_disk is not concerned by this vulnerability.	apache	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3651
2420	CVE-2018-1302	MEDIUM	MEDIUM	When an HTTP/2 stream was destroyed after being handled, the Apache HTTP Server prior to version 2.4.30 could have written a NULL pointer potentially to an already freed memory. The memory pools maintained by the server make this vulnerability hard to trigger in usual configurations, the reporter and the team could not reproduce it outside debug builds, so it is classified as low risk.	apache	Unchanged	Not vulnerable	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3659
2421	CVE-2018-1301	MEDIUM	MEDIUM	A specially crafted request could have crashed the Apache HTTP Server prior to version 2.4.30, due to an out of bound access after a size limit is reached by reading the HTTP header. This vulnerability is considered very hard if not impossible to trigger in non-debug mode (both log and build level), so it is classified as low risk for common server usage.	apache2	Unchanged	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3682
2422	CVE-2018-12934	MEDIUM	HIGH	remember_Ktype in cplus-dem.c in GNU libiberty, as distributed in GNU Binutils 2.30, allows attackers to trigger excessive memory consumption (aka OOM). This can occur during execution of cxxfilt.	binutils	Unchanged	Vulnerable	Vulnerable	Vulnerable	Investigate	Not vulnerable	Not vulnerable	LIN10-4173
2423	CVE-2018-12931	HIGH	HIGH	ntfs_attr_find in the ntfs.ko filesystem driver in the Linux kernel 4.15.0 allows attackers to trigger a stack-based out-of-bounds write and cause a denial of service (kernel oops or panic) or possibly have unspecified other impact via a crafted ntfs filesystem.	linux	Unchanged	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4215
2424	CVE-2018-12930	HIGH	HIGH	ntfs_end_buffer_async_read in the ntfs.ko filesystem driver in the Linux kernel 4.15.0 allows attackers to trigger a stack-based out-of-bounds write and cause a denial of service (kernel oops or panic) or possibly have unspecified other impact via a crafted ntfs filesystem.	linux	Unchanged	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4218
2425	CVE-2018-12929	MEDIUM	MEDIUM	ntfs_read_locked_inode in the ntfs.ko filesystem driver in the Linux kernel 4.15.0 allows attackers to trigger a use-after-free read and possibly cause a denial of service (kernel oops or panic) via a crafted ntfs filesystem.	linux	Unchanged	Investigate	Investigate	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4179
2426	CVE-2018-12928	MEDIUM	MEDIUM	In the Linux kernel 4.15.0, a NULL pointer dereference was discovered in hfs_ext_read_extent in hfs.ko. This can occur during a mount of a crafted hfs filesystem.	linux	Unchanged	Investigate	Investigate	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4229
2427	CVE-2018-12911	HIGH	CRITICAL	WebKitGTK+ 2.20.3 has an off-by-one error, with a resultant out-of-bounds write, in the get_simple_globs functions in ThirdParty/xdgmime/src/xdgmimecache.c and ThirdParty/xdgmime/src/xdgmimeglob.c.	webkitgtk	Unchanged	Vulnerable	Vulnerable	Vulnerable	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4381
2428	CVE-2018-12910	HIGH	CRITICAL	soup_cookie_jar_get_cookies in soup-cookie-jar.c in libsoup allows attackers to have unspecified impact via an empty hostname.	libsoup	Unchanged	8.0.0.27	9.0.0.17	10.17.41.10	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4289
2429	CVE-2018-12904	MEDIUM	MEDIUM	In arch/x86/kvm/vmx.c in the Linux kernel before 4.17.2, when nested virtualization is used, local attackers could cause L1 KVM guests to VMEXIT, potentially allowing privilege escalations and denial of service attacks due to lack of checking of CPL.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4189
2430	CVE-2018-12900	MEDIUM	HIGH	Heap-based buffer overflow in the cpSeparateBufToContigBuf function in tiffcp.c in LibTIFF 4.0.9 allows remote attackers to cause a denial of service (crash) or possibly have unspecified other impact via a crafted TIFF file.	tiff	Unchanged	Vulnerable	9.0.0.21	10.17.41.15	10.18.44.6	10.19.45.1	Not vulnerable	LIN10-4193
2431	CVE-2018-12896	LOW	MEDIUM	An issue was discovered in the Linux kernel through 4.17.3. An Integer Overflow in kernel/time/posix-timers.c in the POSIX timer code is caused by the way the overrun accounting works. Depending on interval and expiry time values, the overrun can be larger than INT_MAX, but the accounting is int based. This basically makes the accounting values, which are visible to user space via timer_getoverrun(2) and siginfo::si_overrun, random. For example, a local user can cause a denial of service (signed integer overflow) via crafted mmap, futex, timer_create, and timer_settime system calls.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4325

	A	B	C	D	E	F	G	H	I	J	K	L	M
2432	CVE-2018-12893	LOW	MEDIUM	An issue was discovered in Xen through 4.10.x. One of the fixes in XSA-260 added some safety checks to help prevent Xen livelocking with debug exceptions. Unfortunately, due to an oversight, at least one of these safety checks can be triggered by a guest. A malicious PV guest can crash Xen, leading to a Denial of Service. All Xen systems which have applied the XSA-260 fix are vulnerable. Only x86 systems are vulnerable. ARM systems are not vulnerable. Only x86 PV guests can exploit the vulnerability. x86 HVM and PVH guests cannot exploit the vulnerability. An attacker needs to be able to control hardware debugging facilities to exploit the vulnerability, but such permissions are typically available to unprivileged users.	xen	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4280
2433	CVE-2018-12892	MEDIUM	CRITICAL	An issue was discovered in Xen 4.7 through 4.10.x. libxl fails to pass the readonly flag to qemu when setting up a SCSI disk, due to what was probably an erroneous merge conflict resolution. Malicious guest administrators or (in some situations) users may be able to write to supposedly read-only disk images. Only emulated SCSI disks (specified as sd in the libxl disk configuration, or an equivalent) are affected. IDE disks (hd) are not affected (because attempts to make them readonly are rejected). Additionally, CDROM devices (that is, devices specified to be presented to the guest as CDROMs, regardless of the nature of the backing storage on the host) are not affected; they are always read only. Only systems using qemu-xen (rather than qemu-xen-traditional) as the device model version are vulnerable. Only systems using libxl or libxl-based toolstacks are vulnerable. (This includes xl, and libvirt with the libxl driver.) The vulnerability is present in Xen versions 4.7 and later. (In earlier versions, provided that the patch for XSA-142 has been applied, attempts to create read only disks are rejected.) If the host and guest together usually support PVHVM, the issue is exploitable only if the malicious guest administrator has control of the guest kernel or guest kernel command line.	xen	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4309
2434	CVE-2018-12891	MEDIUM	MEDIUM	An issue was discovered in Xen through 4.10.x. Certain PV MMU operations may take a long time to process. For that reason Xen explicitly checks for the need to preempt the current vCPU at certain points. A few rarely taken code paths did bypass such checks. By suitably enforcing the conditions through its own page table contents, a malicious guest may cause such bypasses to be used for an unbounded number of iterations. A malicious or buggy PV guest may cause a Denial of Service (DoS) affecting the entire host. Specifically, it may prevent use of a physical CPU for an indeterminate period of time. All Xen versions from 3.4 onwards are vulnerable. Xen versions 3.3 and earlier are vulnerable to an even wider class of attacks, due to them lacking preemption checks altogether in the affected code paths. Only x86 systems are affected. ARM systems are not affected. Only multi-vCPU x86 PV guests can leverage the vulnerability. x86 HVM or PVH guests as well as x86 single-vCPU PV ones cannot leverage the vulnerability.	xen	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4314
2435	CVE-2018-12886	Medium	HIGH	stack_protect_prologue in cfgexpand.c and stack_protect_epilogue in function.c in GNU Compiler Collection (GCC) 4.1 through 8 (under certain circumstances) generate instruction sequences when targeting ARM targets that spill the address of the stack protector guard, which allows an attacker to bypass the protection of -fstack-protector, -fstack-protector-all, -fstack-protector-strong, and -fstack-protector-explicit against stack overflow by controlling what the stack canary is compared against.	gcc	Unchanged	Vulnerable	Vulnerable	Vulnerable	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4138
2436	CVE-2018-12882	HIGH	CRITICAL	exif_read_from_impl in ext/exif/exif.c in PHP 7.2.x through 7.2.7 allows attackers to trigger a use-after-free (in exif_read_from_file) because it closes a stream that it is not responsible for closing. The vulnerable code is reachable through the PHP exif_read_data function.	php	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4204
2437	CVE-2018-1283	LOW	MEDIUM	In Apache httpd 2.4.0 to 2.4.29, when mod_session is configured to forward its session data to CGI applications (SessionEnv on, not the default), a remote user may influence their content by using a Session header. This comes from the HTTP_SESSION variable name used by mod_session to forward its data to CGIs, since the prefix HTTP_ is also used by the Apache HTTP Server to pass HTTP header fields, per CGI specifications.	apache	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3662
2438	CVE-2018-12714	HIGH	CRITICAL	An issue was discovered in the Linux kernel through 4.17.2. The filter parsing in kernel/trace/trace_events_filter.c could be called with no filter, which is an N=0 case when it expected at least one line to have been read, thus making the N-1 index invalid. This allows attackers to cause a denial of service (slab out-of-bounds write) or possibly have unspecified other impact via crafted perf_event_open and mmap system calls.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4198
2439	CVE-2018-12713	MEDIUM	CRITICAL	GIMP through 2.10.2 makes g_get_tmp_dir calls to establish temporary filenames, which may result in a filename that already exists, as demonstrated by the gimp_write_and_read_file function in app/tests/test-xcf.c. This might be leveraged by attackers to overwrite files or read file content that was intended to be private.	gimp	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4195
2440	CVE-2018-12700	MEDIUM	HIGH	A Stack Exhaustion issue was discovered in debug_write_type in debug.c in GNU Binutils 2.30 because of DEBUG_KIND_INDIRECT infinite recursion.	binutils	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4197

	A	B	C	D	E	F	G	H	I	J	K	L	M
2441	CVE-2018-12699	HIGH	CRITICAL	finish_stab in stabs.c in GNU Binutils 2.30 allows attackers to cause a denial of service (heap-based buffer overflow) or possibly have unspecified other impact, as demonstrated by an out-of-bounds write of 8 bytes. This can occur during execution of objdump.	binutils	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4210
2442	CVE-2018-12698	MEDIUM	HIGH	demangle_template in cplus-dem.c in GNU libiberty, as distributed in GNU Binutils 2.30, allows attackers to trigger excessive memory consumption (aka OOM) during the Create an array for saving the template argument values XNEWVEC call. This can occur during execution of objdump.	binutils	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4234
2443	CVE-2018-12697	MEDIUM	HIGH	A NULL pointer dereference (aka SEGV on unknown address 0x000000000000) was discovered in work_stuff_copy_to_from in cplus-dem.c in GNU libiberty, as distributed in GNU Binutils 2.30. This can occur during execution of objdump.	binutils	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4200
2444	CVE-2018-12641	MEDIUM	MEDIUM	An issue was discovered in arm_pt in cplus-dem.c in GNU libiberty, as distributed in GNU Binutils 2.30. Stack Exhaustion occurs in the C++ demangling functions provided by libiberty, and there are recursive stack frames: demangle_arm_hp_template, demangle_class_name, demangle_fund_type, do_type, do_arg, demangle_args, and demangle_nested_args. This can occur during execution of nm-new.	binutils	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	10.18.44.3	Not vulnerable	Not vulnerable	LIN10-4175
2445	CVE-2018-12633	MEDIUM	MEDIUM	An issue was discovered in the Linux kernel through 4.17.2. vbg_misc_device_ioctl() in drivers/virt/vboxguest/vboxguest_linux.c reads the same user data twice with copy_from_user. The header part of the user data is double-fetched, and a malicious user thread can tamper with the critical variables (hdr.size_in and hdr.size_out) in the header between the two fetches because of a race condition, leading to severe kernel errors, such as buffer over-accesses. This bug can cause a local denial of service and information leakage.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4183
2446	CVE-2018-12617	MEDIUM	HIGH	qmp_guest_file_read in qga/commands-posix.c and qga/commands-win32.c in qemu-ga (aka QEMU Guest Agent) in QEMU 2.12.50 has an integer overflow causing a g_malloc0() call to trigger a segmentation fault when trying to allocate a large memory chunk. The vulnerability can be exploited by sending a crafted QMP command (including guest-file-read with a large count value) to the agent via the listening socket.	qemu	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4227
2447	CVE-2018-12613	MEDIUM	HIGH	An issue was discovered in phpMyAdmin 4.8.x before 4.8.2, in which an attacker can include (view and potentially execute) files on the server. The vulnerability comes from a portion of code where pages are redirected and loaded within phpMyAdmin, and an improper test for whitelisted pages. An attacker must be authenticated, except in the $cfg['AllowArbitraryServer'] = true case (where an attacker can specify any host he/she is already in control of, and execute arbitrary code on phpMyAdmin) and the $cfg['ServerDefault'] = 0 case (which bypasses the login requirement and runs the vulnerable code without any authentication).	phpmyadmin	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4228
2448	CVE-2018-12600	MEDIUM	HIGH	In ImageMagick 7.0.8-3 Q16, ReadDIBImage and WriteDIBImage in coders/dib.c allow attackers to cause an out of bounds write via a crafted file.	imagemagick	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4221
2449	CVE-2018-12599	MEDIUM	HIGH	In ImageMagick 7.0.8-3 Q16, ReadBMPImage and WriteBMPImage in coders/bmp.c allow attackers to cause an out of bounds write via a crafted file.	imagemagick	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4211
2450	CVE-2018-12581	MEDIUM	MEDIUM	An issue was discovered in js/designer/move.js in phpMyAdmin before 4.8.2. A Cross-Site Scripting vulnerability has been found where an attacker can use a crafted database name to trigger an XSS attack when that database is referenced from the Designer feature.	phpmyadmin	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4233
2451	CVE-2018-12551	Medium	HIGH	When Eclipse Mosquitto version 1.0 to 1.5.5 (inclusive) is configured to use a password file for authentication, any malformed data in the password file will be treated as valid. This typically means that the malformed data becomes a username and no password. If this occurs, clients can circumvent authentication and get access to the broker by using the malformed username. In particular, a blank line will be treated as a valid empty username. Other security measures are unaffected. Users who have only used the mosquitto_passwd utility to create and modify their password files are unaffected by this vulnerability.	mosquitto	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3812
2452	CVE-2018-12550	Medium	HIGH	When Eclipse Mosquitto version 1.0 to 1.5.5 (inclusive) is configured to use an ACL file, and that ACL file is empty, or contains only comments or blank lines, then Mosquitto will treat this as though no ACL file has been defined and use a default allow policy. The new behaviour is to have an empty ACL file mean that all access is denied, which is not a useful configuration but is not unexpected.	mosquitto	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3814
2453	CVE-2018-12546	Medium	MEDIUM	In Eclipse Mosquitto version 1.0 to 1.5.5 (inclusive) when a client publishes a retained message to a topic, then has its access to that topic revoked, the retained message will still be published to clients that subscribe to that topic in the future. In some applications this may result in clients being able cause effects that would otherwise not be allowed.	mosquitto	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3815
2454	CVE-2018-12543	MEDIUM	HIGH	In Eclipse Mosquitto versions 1.5 to 1.5.2 inclusive, if a message is published to Mosquitto that has a topic starting with $, but that is not $SYS, e.g. $test/test, then an assert is triggered that should otherwise not be reachable and Mosquitto will exit.	mosquitto	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	LIN10-5010

2494	CVE-2018-11490	MEDIUM	HIGH	The DGifDecompressLine function in dgif_lib.c in GIFLIB (possibly version 3.0.x), as later shipped in cgif.c in sam2p 0.49.4, has a heap-based buffer overflow because a certain Private->RunningCode - 2 array index is not checked. This will lead to a denial of service or possibly unspecified other impact.	giflib	Unchanged	Won't Fix	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4045
2495	CVE-2018-11489	MEDIUM	HIGH	The DGifDecompressLine function in dgif_lib.c in GIFLIB (possibly version 3.0.x), as later shipped in cgif.c in sam2p 0.49.4, has a heap-based buffer overflow because a certain CrntCode array index is not checked. This will lead to a denial of service or possibly unspecified other impact.	giflib	Unchanged	Won't Fix	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4041
2496	CVE-2018-11439	MEDIUM	MEDIUM	The TagLib::Ogg::FLAC::File::scan function in oggflacfile.cpp in TagLib 1.11.1 allows remote attackers to cause information disclosure (heap-based buffer over-read) via a crafted audio file.	taglib	Unchanged	8.0.0.30	9.0.0.21	10.17.41.13	10.18.44.1	10.19.45.1	Not vulnerable	LIN10-4044
2497	CVE-2018-11412	MEDIUM	MEDIUM	In the Linux kernel 4.13 through 4.16.11, ext4_read_inline_data() in fs/ext4/inline.c performs a memcpy with an untrusted length value in certain circumstances involving a crafted filesystem that stores the system.data extended attribute value in a dedicated inode.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4058
2498	CVE-2018-1140	LOW	MEDIUM	A missing input sanitization flaw was found in the implementation of LDP database used for the LDAP server. An attacker could use this flaw to cause a denial of service against a samba server, used as a Active Directory Domain Controller. All versions of Samba from 4.8.0 onwards are vulnerable	samba	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4619
2499	CVE-2018-11396	MEDIUM	HIGH	ephy-session.c in libephymain.so in GNOME Web (aka Epiphany) through 3.28.2.1 allows remote attackers to cause a denial of service (application crash) via JavaScript code that triggers access to a NULL URL, as demonstrated by a crafted window.open call.	epiphany	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4038
2500	CVE-2018-1139	MEDIUM	HIGH	A flaw was found in the way samba before 4.7.9 and 4.8.4 allowed the use of weak NTLMv1 authentication even when NTLMv1 was explicitly disabled. A man-in-the-middle attacker could use this flaw to read the credential and other details passed between the samba server and client.	samba	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4639
2501	CVE-2018-11362	MEDIUM	HIGH	In Wireshark 2.6.0, 2.4.0 to 2.4.6, and 2.2.0 to 2.2.14, the LDSS dissector could crash. This was addressed in epan/dissectors/packet-ldss.c by avoiding a buffer over-read upon encountering a missing '\0' character.	wireshark	Unchanged	Not vulnerable	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4063
2502	CVE-2018-11361	MEDIUM	HIGH	In Wireshark 2.6.0, the IEEE 802.11 protocol dissector could crash. This was addressed in epan/crypt/dot11decrypt.c by avoiding a buffer overflow during FTE processing in Dot11DecryptTDLSDeriveKey.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4059
2503	CVE-2018-11360	MEDIUM	HIGH	In Wireshark 2.6.0, 2.4.0 to 2.4.6, and 2.2.0 to 2.2.14, the GSM A DTAP dissector could crash. This was addressed in epan/dissectors/packet-gsm_a_dtap.c by fixing an off-by-one error that caused a buffer overflow.	wireshark	Unchanged	Not vulnerable	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4052
2504	CVE-2018-11359	MEDIUM	HIGH	In Wireshark 2.6.0, 2.4.0 to 2.4.6, and 2.2.0 to 2.2.14, the RRC dissector and other dissectors could crash. This was addressed in epan/proto.c by avoiding a NULL pointer dereference.	wireshark	Unchanged	Not vulnerable	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4028
2505	CVE-2018-11358	MEDIUM	HIGH	In Wireshark 2.6.0, 2.4.0 to 2.4.6, and 2.2.0 to 2.2.14, the Q.931 dissector could crash. This was addressed in epan/dissectors/packet-q931.c by avoiding a use-after-free after a malformed packet prevented certain cleanup.	wireshark	Unchanged	Not vulnerable	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4027
2506	CVE-2018-11357	MEDIUM	HIGH	In Wireshark 2.6.0, 2.4.0 to 2.4.6, and 2.2.0 to 2.2.14, the LTP dissector and other dissectors could consume excessive memory. This was addressed in epan/tvbuff.c by rejecting negative lengths.	wireshark	Unchanged	Not vulnerable	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4037
2507	CVE-2018-11356	MEDIUM	HIGH	In Wireshark 2.6.0, 2.4.0 to 2.4.6, and 2.2.0 to 2.2.14, the DNS dissector could crash. This was addressed in epan/dissectors/packet-dns.c by avoiding a NULL pointer dereference for an empty name in an SRV record.	wireshark	Unchanged	Not vulnerable	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4060
2508	CVE-2018-11355	MEDIUM	HIGH	In Wireshark 2.6.0, the RTCP dissector could crash. This was addressed in epan/dissectors/packet-rtcp.c by avoiding a buffer overflow for packet status chunks.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4054
2509	CVE-2018-11354	MEDIUM	HIGH	In Wireshark 2.6.0, the IEEE 1905.1a dissector could crash. This was addressed in epan/dissectors/packet-ieee1905.c by making a certain correction to string handling.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4040
2510	CVE-2018-1130	MEDIUM	MEDIUM	Linux kernel before version 4.16-rc7 is vulnerable to a null pointer dereference in dccp_write_xmit() function in net/dccp/output.c in that allows a local user to cause a denial of service by a number of certain crafted system calls.	linux	Unchanged	8.0.0.27	9.0.0.17	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3940
2511	CVE-2018-1129	LOW	MEDIUM	A flaw was found in the way signature calculation was handled by cephx authentication protocol. An attacker having access to ceph cluster network who is able to alter the message payload was able to bypass signature checks done by cephx protocol. Ceph branches master, mimic, luminous and jewel are believed to be vulnerable.	ceph	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4276
2512	CVE-2018-1128	MEDIUM	HIGH	It was found that cephx authentication protocol did not verify ceph clients correctly and was vulnerable to replay attack. Any attacker having access to ceph cluster network who is able to sniff packets on network can use this vulnerability to authenticate with ceph service and perform actions allowed by ceph service. Ceph branches master, mimic, luminous and jewel are believed to be vulnerable.	ceph	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4311
2513	CVE-2018-1126	HIGH	CRITICAL	procps-ng before version 3.3.15 is vulnerable to an incorrect integer size in proc/alloc.* leading to truncation/integer overflow issues. This flaw is related to CVE-2018-1124.	procps	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3985

	A	B	C	D	E	F	G	H	I	J	K	L	M
2514	CVE-2018-11251	MEDIUM	MEDIUM	In ImageMagick 7.0.7-23 Q16 x86_64 2018-01-24, there is a heap-based buffer over-read in ReadSUNImage in coders/sun.c, which allows attackers to cause a denial of service (application crash in SetGrayscaleImage in MagickCore/quantize.c) via a crafted SUN image file.	imagemagick	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4048
2515	CVE-2018-1125	MEDIUM	HIGH	procps-ng before version 3.3.15 is vulnerable to a stack buffer overflow in pgrep. This vulnerability is mitigated by FORTIFY, as it involves strncat() to a stack-allocated string. When pgrep is compiled with FORTIFY (as on Red Hat Enterprise Linux and Fedora), the impact is limited to a crash.	procps	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3984
2516	CVE-2018-1124	MEDIUM	HIGH	procps-ng before version 3.3.15 is vulnerable to multiple integer overflows leading to a heap corruption in file2strvec function. This allows a privilege escalation for a local attacker who can create entries in procfs by starting processes, which could result in crashes or arbitrary code execution in proc utilities run by other users.	procps	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3983
2517	CVE-2018-11237	MEDIUM	HIGH	An AVX-512-optimized implementation of the mempcpy function in the GNU C Library (aka glibc or libc6) 2.27 and earlier may write data beyond the target buffer, leading to a buffer overflow in __mempcpy_avx512_no_vzeroupper.	glibc	Unchanged	Not vulnerable	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4035
2518	CVE-2018-11236	MEDIUM	HIGH	stdlib/canonicalize.c in the GNU C Library (aka glibc or libc6) 2.27 and earlier, when processing very long pathname arguments to the realpath function, could encounter an integer overflow on 32-bit architectures, leading to a stack-based buffer overflow and, potentially, arbitrary code execution.	glibc	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4050
2519	CVE-2018-11235	MEDIUM	HIGH	In Git before 2.13.7, 2.14.x before 2.14.4, 2.15.x before 2.15.2, 2.16.x before 2.16.4, and 2.17.x before 2.17.1, remote code execution can occur. With a crafted .gitmodules file, a malicious project can execute an arbitrary script on a machine that runs git clone --recurse-submodules because submodule names are obtained from this file, and then appended to $GIT_DIR/modules, leading to directory traversal with ../ in a name. Finally, post-checkout hooks from a submodule are executed, bypassing the intended design in which hooks are not obtained from a remote server.	git	Unchanged	8.0.0.27	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4061
2520	CVE-2018-11233	MEDIUM	HIGH	In Git before 2.13.7, 2.14.x before 2.14.4, 2.15.x before 2.15.2, 2.16.x before 2.16.4, and 2.17.x before 2.17.1, code to sanity-check pathnames on NTFS can result in reading out-of-bounds memory.	git	Unchanged	8.0.0.27	9.0.0.17	10.17.41.10	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4053
2521	CVE-2018-11232	MEDIUM	MEDIUM	The etm_setup_aux function in drivers/hwtracing/coresight/coresight-etm-perf.c in the Linux kernel before 4.10.2 allows attackers to cause a denial of service (panic) because a parameter is incorrectly used as a local variable.	linux	Unchanged	Not vulnerable	9.0.0.17	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4049
2522	CVE-2018-1123	MEDIUM	HIGH	procps-ng before version 3.3.15 is vulnerable to a denial of service in ps via mmap buffer overflow. Inbuilt protection in ps maps a guard page at the end of the overflowed buffer, ensuring that the impact of this flaw is limited to a crash (temporary denial of service).	procps	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3982
2523	CVE-2018-11224	MEDIUM	MEDIUM	An issue was discovered in Libav 12.3. A read access violation in the in_table_init16 function in libavcodec/aacsbr.c allows remote attackers to cause a denial of service (application crash), as demonstrated by avconv.	libav	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4064
2524	CVE-2018-1122	MEDIUM	HIGH	procps-ng before version 3.3.15 is vulnerable to a local privilege escalation in top. If a user runs top with HOME unset in an attacker-controlled directory, the attacker could achieve privilege escalation by exploiting one of several vulnerabilities in the config_file() function.	procps	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3981
2525	CVE-2018-11219	HIGH	CRITICAL	An Integer Overflow issue was discovered in the struct library in the Lua subsystem in Redis before 3.2.12, 4.x before 4.0.10, and 5.x before 5.0 RC2, leading to a failure of bounds checking.	redis	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4171
2526	CVE-2018-11218	HIGH	CRITICAL	Memory Corruption was discovered in the cmsgpack library in the Lua subsystem in Redis before 3.2.12, 4.x before 4.0.10, and 5.x before 5.0 RC2 because of stack-based buffer overflows.	redis	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4225
2527	CVE-2018-1121	MEDIUM	MEDIUM	An unprivileged attacker can hide a process from procps-ng's utilities, by exploiting either a denial of service (a rather noisy method) or a race condition inherent in reading /proc/PID entries (a stealthier method).?	linux	Unchanged	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3980
2528	CVE-2018-1120	LOW	MEDIUM	An attacker can block any read() access to /proc/PID/cmdline by mmap()ing a FUSE file (Filesystem in Userspace) onto this process's command-line arguments. The attacker can therefore block pgrep, pidof, pkill, ps, and w, either forever (a denial of service), or for some controlled time (a synchronization tool for exploiting other Vulnerabilities)	linux	Unchanged	8.0.0.29	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3979
2529	CVE-2018-1118	LOW	MEDIUM	Linux kernel vhost since version 4.8 does not properly initialize memory in messages passed between virtual guests and the host operating system in the vhost/vhost.c:vhost_new_msg() function. This can allow local privileged users to read some kernel memory contents when reading from the /dev/vhost-net device file.	linux	Unchanged	Not vulnerable	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3929
2530	CVE-2018-1116	LOW	HIGH	A flaw was found in polkit before version 0.116. The implementation of the polkit_backend_interactive_authority_check_authorization function in polkitd allows to test for authentication and trigger authentication of unrelated processes owned by other users. This may result in a local DoS and information disclosure.	polkit	Unchanged	Won't Fix	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4290
2531	CVE-2018-1115	MEDIUM	CRITICAL	postgresql before versions 10.4, 9.6.9 is vulnerable in the adminpack extension, the pg_catalog.pg_logfile_rotate() function doesn't follow the same ACLs than pg_rorate_logfile. If the adminpack is added to a database, an attacker able to connect to it could exploit this to force log rotation.	postgresql	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3931

	A	B	C	D	E	F	G	H	I	J	K	L	M
2532	CVE-2018-1112	HIGH	HIGH	glusterfs server before versions 3.10.12, 4.0.2 is vulnerable when using 'auth.allow' option which allows any unauthenticated gluster client to connect from any network to mount gluster storage volumes. NOTE: this vulnerability exists because of a CVE-2018-1088 regression.	glusterfs	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3863
2533	CVE-2018-11102	MEDIUM	HIGH	An issue was discovered in Libav 12.3. A read access violation in the mov_probe function in libavformat/mov.c allows remote attackers to cause a denial of service (application crash), as demonstrated by avconv.	libav	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3925
2534	CVE-2018-1108	MEDIUM	MEDIUM	kernel drivers before version 4.17-rc1 are vulnerable to a weakness in the Linux kernel's implementation of random seed data. Programs, early in the boot sequence, could use the data allocated for the seed before it was sufficiently generated.	linux	Unchanged	Not vulnerable	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4032
2535	CVE-2018-1100	HIGH	HIGH	zsh through version 5.4.2 is vulnerable to a stack-based buffer overflow in the utils.c:checkmailpath function. A local attacker could exploit this to execute arbitrary code in the context of another user.	zsh	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3754
2536	CVE-2018-10963	MEDIUM	MEDIUM	The TIFFWriteDirectorySec() function in tif_dirwrite.c in LibTIFF through 4.0.9 allows remote attackers to cause a denial of service (assertion failure and application crash) via a crafted file.	libtiff	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3941
2537	CVE-2018-1095	HIGH	MEDIUM	The ext4_xattr_check_entries function in fs/ext4/xattr.c in the Linux kernel through 4.15.15 does not properly validate xattr sizes, which causes misinterpretation of a size as an error code, and consequently allows attackers to cause a denial of service (get_acl NULL pointer dereference and system crash) via a crafted ext4 image.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3670
2538	CVE-2018-10940	MEDIUM	MEDIUM	The cdrom_ioctl_media_changed function in drivers/cdrom/cdrom.c in the Linux kernel before 4.16.6 allows local attackers to use a incorrect bounds check in the CDROM driver CDROM_MEDIA_CHANGED ioctl to read out kernel memory.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3935
2539	CVE-2018-1094	HIGH	MEDIUM	The ext4_fill_super function in fs/ext4/super.c in the Linux kernel through 4.15.15 does not always initialize the crc32c checksum driver, which allows attackers to cause a denial of service (ext4_xattr_inode_hash NULL pointer dereference and system crash) via a crafted ext4 image.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3661
2540	CVE-2018-10938	HIGH	MEDIUM	A flaw was found in the Linux kernel present since v4.0-rc1 and through v4.13-rc4. A crafted network packet sent remotely by an attacker may force the kernel to enter an infinite loop in the cipso_v4_optptr() function in net/ipv4/cipso_ipv4.c leading to a denial-of-service.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4628
2541	CVE-2018-10933	Medium	CRITICAL	A vulnerability was found in libssh's server-side state machine before versions 0.7.6 and 0.8.4. A malicious client could create channels without first performing authentication, resulting in unauthorized access.	libssh	Unchanged	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4879
2542	CVE-2018-10930	MEDIUM	MEDIUM	A flaw was found in RPC request using gfs3_rename_req in glusterfs server. An authenticated attacker could use this flaw to write to a destination outside the gluster volume.	glusterfs	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4712
2543	CVE-2018-1093	HIGH	MEDIUM	The ext4_valid_block_bitmap function in fs/ext4/balloc.c in the Linux kernel through 4.15.15 allows attackers to cause a denial of service (out-of-bounds read and system crash) via a crafted ext4 image because balloc.c and ialloc.c do not validate bitmap block numbers.	linux	Unchanged	8.0.0.27	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3644
2544	CVE-2018-10929	MEDIUM	HIGH	A flaw was found in RPC request using gfs2_create_req in glusterfs server. An authenticated attacker could use this flaw to create arbitrary files and execute arbitrary code on glusterfs server nodes.	glusterfs	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4699
2545	CVE-2018-10928	MEDIUM	HIGH	A flaw was found in RPC request using gfs3_symlink_req in glusterfs server which allows symlink destinations to point to file paths outside of the gluster volume. An authenticated attacker could use this flaw to create arbitrary symlinks pointing anywhere on the server and execute arbitrary code on glusterfs server nodes.	glusterfs	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4721
2546	CVE-2018-10927	MEDIUM	HIGH	A flaw was found in RPC request using gfs3_lookup_req in glusterfs server. An authenticated attacker could use this flaw to leak information and execute remote denial of service by crashing gluster brick process.	glusterfs	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4697
2547	CVE-2018-10926	MEDIUM	HIGH	A flaw was found in RPC request using gfs3_mknod_req supported by glusterfs server. An authenticated attacker could use this flaw to write files to an arbitrary location via path traversal and execute arbitrary code on a glusterfs server node.	glusterfs	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4736
2548	CVE-2018-10925	MEDIUM	HIGH	It was discovered that PostgreSQL versions before 10.5, 9.6.10, 9.5.14, 9.4.19, and 9.3.24 failed to properly check authorization on certain statements involved with INSERT ... ON CONFLICT DO UPDATE. An attacker with CREATE TABLE privileges could exploit this to read arbitrary bytes server memory. If the attacker also had certain INSERT and limited UPDATE privileges to a particular table, they could exploit this to update other columns in the same table.	postgresql	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4546
2549	CVE-2018-10924	MEDIUM	MEDIUM	It was discovered that fsync(2) system call in glusterfs client code leaks memory. An authenticated attacker could use this flaw to launch a denial of service attack by making gluster clients consume memory of the host machine.	glusterfs	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4709
2550	CVE-2018-10923	MEDIUM	HIGH	It was found that the mknod call derived from mknod(2) can create files pointing to devices on a glusterfs server node. An authenticated attacker could use this to create an arbitrary device and read data from any device attached to the glusterfs server node.	glusterfs	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4689

	A	B	C	D	E	F	G	H	I	J	K	L	M
2551	CVE-2018-1092	HIGH	MEDIUM	The ext4_iget function in fs/ext4/inode.c in the Linux kernel through 4.15.15 mishandles the case of a root directory with a zero i_links_count, which allows attackers to cause a denial of service (ext4_process_freed_data NULL pointer dereference and OOPS) via a crafted ext4 image.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3634
2552	CVE-2018-10919	MEDIUM	MEDIUM	The Samba Active Directory LDAP server was vulnerable to an information disclosure flaw because of missing access control checks. An authenticated attacker could use this flaw to extract confidential attribute values using LDAP search expressions. Samba versions before 4.6.16, 4.7.9 and 4.8.4 are vulnerable.	samba	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4586
2553	CVE-2018-10918	MEDIUM	MEDIUM	A null pointer dereference flaw was found in the way samba checked database outputs from the LDB database layer. An authenticated attacker could use this flaw to crash a samba server in an Active Directory Domain Controller configuration. Samba versions before 4.7.9 and 4.8.4 are vulnerable.	samba	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4612
2554	CVE-2018-10916	HIGH	MEDIUM	It has been discovered that lftp up to and including version 4.8.3 does not properly sanitize remote file names, leading to a loss of integrity on the local system when reverse mirroring is used. A remote attacker may trick a user to use reverse mirroring on an attacker controlled FTP server, resulting in the removal of all files in the current working directory of the victim's system.	lftp	Unchanged	8.0.0.27	9.0.0.18	Won't Fix	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4537
2555	CVE-2018-10915	MEDIUM	HIGH	A vulnerability was found in libpq, the default PostgreSQL client library where libpq failed to properly reset its internal state between connections. If an affected version of libpq was used with host or hostaddr connection parameters from untrusted input, attackers could bypass client-side connection security features, obtain access to higher privileged connections or potentially cause other impact through SQL injection, by causing the PQescape() functions to malfunction. Postgresql versions before 10.5, 9.6.10, 9.5.14, 9.4.19, and 9.3.24 are affected.	postgresql	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4542
2556	CVE-2018-10914	MEDIUM	MEDIUM	It was found that an attacker could issue a xattr request via glusterfs FUSE to cause gluster brick process to crash which will result in a remote denial of service. If gluster multiplexing is enabled this will result in a crash of multiple bricks and gluster volumes.	glusterfs	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4710
2557	CVE-2018-10913	MEDIUM	MEDIUM	An information disclosure vulnerability was discovered in glusterfs server. An attacker could issue a xattr request via glusterfs FUSE to determine the existence of any file.	glusterfs	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4741
2558	CVE-2018-10911	MEDIUM	HIGH	A flaw was found in the way dic_unserialize function of glusterfs does not handle negative key length values. An attacker could use this flaw to read memory from other locations into the stored dict value.	glusterfs	Unchanged	8.0.0.28	Investigate	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4679
2559	CVE-2018-1091	MEDIUM	MEDIUM	In the flush_tmregs_to_thread function in arch/powerpc/kernel/ptrace.c in the Linux kernel before 4.13.5, a guest kernel crash can be triggered from unprivileged userspace during a core dump on a POWER host due to a missing processor feature check and an erroneous use of transactional memory (TM) instructions in the core dump path, leading to a denial of service.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3674
2560	CVE-2018-10907	MEDIUM	HIGH	It was found that glusterfs server is vulnerable to multiple stack based buffer overflows due to functions in server-rpc-fopc.c allocating fixed size buffers using 'alloca(3)'. An authenticated attacker could exploit this by mounting a gluster volume and sending a string longer that the fixed buffer size to cause crash or potential code execution.	glusterfs	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4740
2561	CVE-2018-10906	MEDIUM	HIGH	In fuse before versions 2.9.8 and 3.x before 3.2.5, fusermount is vulnerable to a restriction bypass when SELinux is active. This allows non-root users to mount a FUSE file system with the 'allow_other' mount option regardless of whether 'user_allow_other' is set in the fuse configuration. An attacker may use this flaw to mount a FUSE file system, accessible by other users, and trick them into accessing files on that file system, possibly causing Denial of Service or other unspecified effects.	fuse	Unchanged	8.0.0.27	9.0.0.18	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4440
2562	CVE-2018-10904	MEDIUM	HIGH	It was found that glusterfs server does not properly sanitize file paths in the trusted.io-stats-dump extended attribute which is used by the debug/io-stats translator. Attacker can use this flaw to create files and execute arbitrary code. To exploit this attacker would require sufficient access to modify the extended attributes of files on a gluster volume.	glusterfs	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4698
2563	CVE-2018-10903	MEDIUM	HIGH	A flaw was found in python-cryptography versions between >=1.9.0 and <2.3. The finalize_with_tag API did not enforce a minimum tag length. If a user did not validate the input length prior to passing it to finalize_with_tag an attacker could craft an invalid payload with a shortened tag (e.g. 1 byte) such that they would have a 1 in 256 chance of passing the MAC check. GCM tag forgeries can cause key leakage.	python-cryptography	Unchanged	Not vulnerable	Not vulnerable	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4407
2564	CVE-2018-10902	MEDIUM	HIGH	It was found that the raw midi kernel driver does not protect against concurrent access which leads to a double realloc (double free) in snd_rawmidi_input_params() and snd_rawmidi_output_status() which are part of snd_rawmidi_ioctl() handler in rawmidi.c file. A malicious local attacker could possibly use this for privilege escalation.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4642
2565	CVE-2018-10901	HIGH	HIGH	A flaw was found in Linux kernel's KVM virtualization subsystem. The VMX code does not restore the GDT.LIMIT to the previous host value, but instead sets it to 64KB. With a corrupted GDT limit a host's userspace code has an ability to place malicious entries in the GDT, particularly to the per-cpu variables. An attacker can use this to escalate their privileges.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4405

	A	B	C	D	E	F	G	H	I	J	K	L	M
2566	CVE-2018-10896	LOW	HIGH	The default cloud-init configuration, in cloud-init 0.6.2 and newer, included ssh_deletekeys: 0, disabling cloud-init's deletion of ssh host keys. In some environments, this could lead to instances created by cloning a golden master or template system, sharing ssh host keys, and being able to impersonate one another or conduct man-in-the-middle attacks.	cloud-init	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4525
2567	CVE-2018-10888	MEDIUM	MEDIUM	A flaw was found in libgit2 before version 0.27.3. A missing check in git_delta_apply function in delta.c file, may lead to an out-of-bound read while reading a binary delta file. An attacker may use this flaw to cause a Denial of Service.	libgit2	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4303
2568	CVE-2018-10887	MEDIUM	HIGH	A flaw was found in libgit2 before version 0.27.3. It has been discovered that an unexpected sign extension in git_delta_apply function in delta.c file may lead to an integer overflow which in turn leads to an out of bound read, allowing to read before the base object. An attacker may use this flaw to leak memory addresses or cause a Denial of Service.	libgit2	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4304
2569	CVE-2018-10883	MEDIUM	MEDIUM	A flaw was found in the Linux kernel's ext4 filesystem. A local user can cause an out-of-bounds write in jbd2_journal_dirty_metadata(), a denial of service, and a system crash by mounting and operating on a crafted ext4 filesystem image.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4387
2570	CVE-2018-10882	MEDIUM	MEDIUM	A flaw was found in the Linux kernel's ext4 filesystem. A local user can cause an out-of-bound write in in fs/jbd2/transaction.c code, a denial of service, and a system crash by unmounting a crafted ext4 filesystem image.	linux	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4391
2571	CVE-2018-10881	MEDIUM	MEDIUM	A flaw was found in the Linux kernel's ext4 filesystem. A local user can cause an out-of-bound access in ext4_get_group_info function, a denial of service, and a system crash by mounting and operating on a crafted ext4 filesystem image.	linux	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4373
2572	CVE-2018-10880	HIGH	MEDIUM	Linux kernel is vulnerable to a stack-out-of-bounds write in the ext4 filesystem code when mounting and writing to a crafted ext4 image in ext4_update_inline_data(). An attacker could use this to cause a system crash and a denial of service.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4397
2573	CVE-2018-1088	MEDIUM	HIGH	A privilege escalation flaw was found in gluster 3.x snapshot scheduler. Any gluster client allowed to mount gluster volumes could also mount shared gluster storage volume and escalate privileges by scheduling malicious cronjob via symlink.	glusterfs	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3930
2574	CVE-2018-10879	MEDIUM	HIGH	A flaw was found in the Linux kernel's ext4 filesystem. A local user can cause a use-after-free in ext4_xattr_set_entry function and a denial of service or unspecified other impact may occur by renaming a file in a crafted ext4 filesystem image.	linux	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4408
2575	CVE-2018-10878	MEDIUM	HIGH	A flaw was found in the Linux kernel's ext4 filesystem. A local user can cause an out-of-bounds write and a denial of service or unspecified other impact is possible by mounting and operating a crafted ext4 filesystem image.	linux	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4377
2576	CVE-2018-10877	MEDIUM	MEDIUM	Linux kernel ext4 filesystem is vulnerable to an out-of-bound access in the ext4_ext_drop_refs() function when operating on a crafted ext4 filesystem image.	linux	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4372
2577	CVE-2018-10876	MEDIUM	MEDIUM	A flaw was found in Linux kernel in the ext4 filesystem code. A use-after-free is possible in ext4_ext_remove_space() function when mounting and operating a crafted ext4 image.	linux	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4429
2578	CVE-2018-10873	MEDIUM	HIGH	A vulnerability was discovered in SPICE before version 0.14.1 where the generated code used for demarshalling messages lacked sufficient bounds checks. A malicious client or server, after authentication, could send specially crafted messages to its peer which would result in a crash or, potentially, other impacts.	spice	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4607
2579	CVE-2018-1087	MEDIUM	HIGH	A flaw was found in the way the Linux kernel's KVM hypervisor handled exceptions delivered after a stack switch operation via Mov SS or Pop SS instructions. During the stack switch operation, processor does not deliver interrupts and exceptions, they are delivered once the first instruction after the stack switch is executed.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3887
2580	CVE-2018-10862	MEDIUM	MEDIUM	WildFly Core before version 6.0.0.Alpha3 does not properly validate file paths in .war archives, allowing for the extraction of crafted .war archives to overwrite arbitrary files. This is an instance of the 'Zip Slip' vulnerability.	wildfly	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9525
2581	CVE-2018-10861	MEDIUM	HIGH	A flaw was found in the way ceph mon handles user requests. Any authenticated ceph user having read access to ceph can delete, create ceph storage pools and corrupt snapshot images. Ceph branches master, mimic, luminous and jewel are believed to be affected.	ceph	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4310
2582	CVE-2018-10858	MEDIUM	HIGH	A heap-buffer overflow was found in the way samba clients processed extra long filename in a directory listing. A malicious samba server could use this flaw to cause arbitrary code execution on a samba client. Samba versions before 4.6.16, 4.7.9 and 4.8.4 are vulnerable.	samba	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4591
2583	CVE-2018-10853	MEDIUM	HIGH	A flaw was found in Linux Kernel KVM versions greater than and including 4.10. In which certain instructions such as sgdt/sidt call segmented_write_std doesn't propagate access correctly. As such, during userspace induced exception, the guest can incorrectly assume that the exception happened in the kernel and panic.	linux	Unchanged	8.0.0.27	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4190
2584	CVE-2018-10852	MEDIUM	HIGH	The UNIX pipe which sudo uses to contact SSSD and read the available sudo rules from SSSD has too wide permissions, which means that anyone who can send a message using the same raw protocol that sudo and SSSD use can read the sudo rules available for any user. This affects versions of SSSD before 1.16.3.	sssd	Unchanged	Not vulnerable	Won't Fix	Won't Fix	10.18.44.15	Won't Fix	Won't Fix	LIN10-4203

	A	B	C	D	E	F	G	H	I	J	K	L	M
2585	CVE-2018-10846	LOW	MEDIUM	A cache-based side channel in GnuTLS implementation that leads to plain text recovery in cross-VM attack setting was found. An attacker could use a combination of Just in Time Prime+probe attack in combination with Lucky-13 attack to recover plain text using crafted packets.	gnutls	Unchanged	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4595
2586	CVE-2018-10845	MEDIUM	MEDIUM	It was found that the GnuTLS implementation of HMAC-SHA-384 was vulnerable to a Lucky thirteen style attack. Remote attackers could use this flaw to conduct distinguishing attacks and plain text recovery attacks via statistical analysis of timing data using crafted packets.	gnutls	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4640
2587	CVE-2018-10844	MEDIUM	MEDIUM	It was found that the GnuTLS implementation of HMAC-SHA-256 was vulnerable to a Lucky thirteen style attack. Remote attackers could use this flaw to conduct distinguishing attacks and plaintext-recovery attacks via statistical analysis of timing data using crafted packets.	gnutls	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4643
2588	CVE-2018-10841	MEDIUM	HIGH	glusterfs is vulnerable to privilege escalation on gluster server nodes. An authenticated gluster client via TLS could use gluster cli with --remote-host command to add it self to trusted storage pool and perform privileged gluster operations like adding other machines to trusted storage pool, start, stop, and delete volumes.	glusterfs	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4177
2589	CVE-2018-10840	HIGH	MEDIUM	The Linux kernel is vulnerable to a heap-based buffer overflow in the fs/ext4/xattr.c:ext4_xattr_set_entry() function. An attacker could exploit this by operating on a mounted crafted ext4 image.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4231
2590	CVE-2018-1084	HIGH	CRITICAL	corosync before version 2.4.4 is vulnerable to an integer overflow in exec/totemcrypto.c.	corosync	Unchanged	8.0.0.26	Won't Fix	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3744
2591	CVE-2018-10839	MEDIUM	MEDIUM	Qemu emulator <= 3.0.0 built with the NE2000 NIC emulation support is vulnerable to an integer overflow, which could lead to buffer overflow issue. It could occur when receiving packets over the network. A user inside guest could use this flaw to crash the Qemu process resulting in DoS.	qemu	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.3	Not vulnerable	Vulnerable	LIN10-4863
2592	CVE-2018-1083	HIGH	HIGH	Zsh before version 5.4.2-test-1 is vulnerable to a buffer overflow in the shell autocomplete functionality. A local unprivileged user can create a specially crafted directory path which leads to code execution in the context of the user who tries to use autocomplete to traverse the before mentioned path. If the user affected is privileged, this leads to privilege escalation.	zsh	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3672
2593	CVE-2018-10811	MEDIUM	HIGH	strongSwan 5.6.0 and older allows Remote Denial of Service because of Missing Initialization of a Variable.	strongswan	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4185
2594	CVE-2018-10805	MEDIUM	MEDIUM	ImageMagick version 7.0.7-28 contains a memory leak in ReadYCBCRImage in coders/ycbcr.c.	imagemagick	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3923

2596	CVE-2018-10801	MEDIUM	MEDIUM	TIFFClientOpen in tif_unix.c in LibTIFF 3.8.2 has memory leaks, as demonstrated by bmp2tiff.	libtiff	Unchanged	Vulnerable	Vulnerable	Vulnerable	Investigate	Not vulnerable	Not vulnerable	LIN10-3936
2597	CVE-2018-10779	MEDIUM	HIGH	TIFFWriteScanline in tif_write.c in LibTIFF 3.8.2 has a heap-based buffer over-read, as demonstrated by bmp2tiff.	libtiff	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3928
2598	CVE-2018-10768	MEDIUM	HIGH	There is a NULL pointer dereference in the AnnotPath::getCoordsLength function in Annot.h in an Ubuntu package for Poppler 0.24.5. A crafted input will lead to a remote denial of service attack. Later Ubuntu packages such as for Poppler 0.41.0 are not affected.	poppler	Unchanged	Won't Fix	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3933
2599	CVE-2018-10754	MEDIUM	HIGH	In ncurses before 6.1.20180414, there is a NULL Pointer Dereference in the _nc_parse_entry function of tinfo/parse_entry.c. It could lead to a remote denial of service if the terminfo library code is used to process untrusted terminfo data in which a use-name is invalid syntax.	ncurses	Unchanged	8.0.0.27	9.0.0.17	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3932
2600	CVE-2018-1071	LOW	MEDIUM	zsh through version 5.4.2 is vulnerable to a stack-based buffer overflow in the exec.c:hashcmd() function. A local attacker could exploit this to cause a denial of service.	zsh	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3559
2601	CVE-2018-10689	MEDIUM	MEDIUM	blktrace (aka Block IO Tracing) 1.2.0, as used with the Linux kernel and Android, has a buffer overflow in the dev_map_read function in btt/devmap.c because the device and devno arrays are too small, as demonstrated by an invalid free when using the btt program with a crafted file.	blktrace	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	10.18.44.1	10.19.45.1	Not vulnerable	LIN10-3922
2602	CVE-2018-1068	HIGH	MEDIUM	A flaw was found in the Linux 4.x kernel's implementation of 32-bit syscall interface for bridging. This allowed a privileged user to arbitrarily write to a limited range of kernel memory.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3658
2603	CVE-2018-10675	HIGH	HIGH	The do_get_mempolicy function in mm/mempolicy.c in the Linux kernel before 4.12.9 allows local users to cause a denial of service (use-after-free) or possibly have unspecified other impact via crafted system calls.	linux	Unchanged	8.0.0.26	9.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3905
2604	CVE-2018-1066	HIGH	MEDIUM	The Linux kernel before version 4.11 is vulnerable to a NULL pointer dereference in fs/cifs/cifsencrypt.c:setup_ntlmv2_rsp() that allows an attacker controlling a CIFS server to kernel panic a client that has this server mounted, because an empty Targetinfo field in an NTLMSSP setup negotiation response is mishandled during session recovery.	linux	Unchanged	8.0.0.26	9.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3540
2605	CVE-2018-1065	MEDIUM	MEDIUM	The netfilter subsystem in the Linux kernel through 4.15.7 mishandles the case of a rule blob that contains a jump but lacks a user-defined chain, which allows local users to cause a denial of service (NULL pointer dereference) by leveraging the CAP_NET_RAW or CAP_NET_ADMIN capability, related to arpt_do_table in net/ipv4/netfilter/arp_tables.c, ipt_do_table in net/ipv4/netfilter/ip_tables.c, and ip6t_do_table in net/ipv6/netfilter/ip6_tables.c.	linux	Unchanged	Not vulnerable	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3561

	A	B	C	D	E	F	G	H	I	J	K	L	M
2606	CVE-2018-1064	MEDIUM	HIGH	libvirt version before 4.2.0-rc1 is vulnerable to a resource exhaustion as a result of an incomplete fix for CVE-2018-5748 that affects QEMU monitor but now also triggered via QEMU guest agent.	libvirt	Unchanged	8.0.0.26	9.0.0.16	10.17.41.6	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3665
2607	CVE-2018-1063	LOW	MEDIUM	Context relabeling of filesystems is vulnerable to symbolic link attack, allowing a local, unprivileged malicious entity to change the SELinux context of an arbitrary file to a context with few restrictions. This only happens when the relabeling process is done, usually when taking SELinux state from disabled to enable (permissive or enforcing). The issue was found in policycoreutils 2.5-11.	policycoreutils	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3585
2608	CVE-2018-1061	MEDIUM	HIGH	python before versions 2.7.15, 3.4.9, 3.5.6 and 3.7.0 is vulnerable to catastrophic backtracking in the difflib.IS_LINE_JUNK method. An attacker could use this flaw to cause denial of service.	python	Unchanged	8.0.0.27	9.0.0.18	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4201
2609	CVE-2018-1060	MEDIUM	HIGH	python before versions 2.7.15, 3.4.9, 3.5.6 and 3.7.0 is vulnerable to catastrophic backtracking in pop3lib's apop() method. An attacker could use this flaw to cause denial of service.	python	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4192
2610	CVE-2018-1059	LOW	MEDIUM	The DPDK vhost-user interface does not check to verify that all the requested guest physical range is mapped and contiguous when performing Guest Physical Addresses to Host Virtual Addresses translations. This may lead to a malicious guest exposing vhost-user backend process memory. All versions before 18.02.1 are vulnerable.	dpdk	Unchanged	8.0.0.29	9.0.0.20	10.17.41.14	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3198
2611	CVE-2018-1058	MEDIUM	HIGH	A flaw was found in the way Postgresql allowed a user to modify the behavior of a query for other users. An attacker with a user account could use this flaw to execute code with the permissions of superuser in the database. Versions 9.3 through 10 are affected.	postgresql	Unchanged	8.0.0.26	9.0.0.15	10.17.41.6	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3563
2612	CVE-2018-1057	MEDIUM	HIGH	On a Samba 4 AD DC the LDAP server in all versions of Samba from 4.0.0 onwards incorrectly validates permissions to modify passwords over LDAP allowing authenticated users to change any other users' passwords, including administrative users and privileged service accounts (eg Domain Controllers).	samba	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3534
2613	CVE-2018-10549	MEDIUM	HIGH	An issue was discovered in PHP before 5.6.36, 7.0.x before 7.0.30, 7.1.x before 7.1.17, and 7.2.x before 7.2.5. exif_read_data in ext/exif/exif.c has an out-of-bounds read for crafted JPEG data because exif_iif_add_value mishandles the case of a MakerNote that lacks a final \0' character.	php	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3860
2614	CVE-2018-10548	MEDIUM	HIGH	An issue was discovered in PHP before 5.6.36, 7.0.x before 7.0.30, 7.1.x before 7.1.17, and 7.2.x before 7.2.5. ext/ldap/ldap.c allows remote LDAP servers to cause a denial of service (NULL pointer dereference and application crash) because of mishandling of the ldap_get_dn return value.	php	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3857
2615	CVE-2018-10547	MEDIUM	MEDIUM	An issue was discovered in ext/phar/phar_object.c in PHP before 5.6.36, 7.0.x before 7.0.30, 7.1.x before 7.1.17, and 7.2.x before 7.2.5. There is Reflected XSS on the PHAR 403 and 404 error pages via request data of a request for a .phar file. NOTE: this vulnerability exists because of an incomplete fix for CVE-2018-5712.	php	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3822
2616	CVE-2018-10546	MEDIUM	HIGH	An issue was discovered in PHP before 5.6.36, 7.0.x before 7.0.30, 7.1.x before 7.1.17, and 7.2.x before 7.2.5. An infinite loop exists in ext/iconv/iconv.c because the iconv stream filter does not reject invalid multibyte sequences.	php	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3826
2617	CVE-2018-10545	LOW	MEDIUM	An issue was discovered in PHP before 5.6.35, 7.0.x before 7.0.29, 7.1.x before 7.1.16, and 7.2.x before 7.2.4. Dumpable FPM child processes allow bypassing opcache access controls because fpm_unix.c makes a PR_SET_DUMPABLE prctl call, allowing one user (in a multiuser environment) to obtain sensitive information from the process memory of a second user's PHP applications by running gcore on the PID of the PHP-FPM worker process.	php	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3824
2618	CVE-2018-10540	MEDIUM	MEDIUM	An issue was discovered in WavPack 5.1.0 and earlier for W64 input. Out-of-bounds writes can occur because ParseWave64HeaderConfig in wave64.c does not validate the sizes of unknown chunks before attempting memory allocation, related to a lack of integer-overflow protection within a bytes_to_copy calculation and subsequent malloc call, leading to insufficient memory allocation.	wavpack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3859
2619	CVE-2018-10539	MEDIUM	MEDIUM	An issue was discovered in WavPack 5.1.0 and earlier for DSDiff input. Out-of-bounds writes can occur because ParseDsdiffHeaderConfig in dsdiff.c does not validate the sizes of unknown chunks before attempting memory allocation, related to a lack of integer-overflow protection within a bytes_to_copy calculation and subsequent malloc call, leading to insufficient memory allocation.	wavpack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3801
2620	CVE-2018-10538	MEDIUM	MEDIUM	An issue was discovered in WavPack 5.1.0 and earlier for WAV input. Out-of-bounds writes can occur because ParseRiffHeaderConfig in riff.c does not validate the sizes of unknown chunks before attempting memory allocation, related to a lack of integer-overflow protection within a bytes_to_copy calculation and subsequent malloc call, leading to insufficient memory allocation.	wavpack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3867
2621	CVE-2018-10537	MEDIUM	HIGH	An issue was discovered in WavPack 5.1.0 and earlier. The W64 parser component contains a vulnerability that allows writing to memory because ParseWave64HeaderConfig in wave64.c does not reject multiple format chunks.	wavpack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3800

The WAV parser component contains a vulnerability that allows writing to memory because ParseRiffHeaderConfig in riff.c does not reject multiple format chunks.	wavpack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3840

	A	B	C	D	E	F	G	H	I	J	K	L	M
2623	CVE-2018-10535	MEDIUM	MEDIUM	The ignore_section_sym function in elf.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.30, does not validate the output_section pointer in the case of a symtab entry with a SECTION type that has a 0 value, which allows remote attackers to cause a denial of service (NULL pointer dereference and application crash) via a crafted file, as demonstrated by objcopy.	binutils	Unchanged	8.0.0.27	9.0.0.20	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3841
2624	CVE-2018-10534	MEDIUM	MEDIUM	The _bfd_XX_bfd_copy_private_bfd_data_common function in peXXigen.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.30, processes a negative Data Directory size with an unbounded loop that increases the value of (external_IMAGE_DEBUG_DIRECTORY) *edd so that the address exceeds its own memory region, resulting in an out-of-bounds memory write, as demonstrated by objcopy copying private info with _bfd_pex64_bfd_copy_private_bfd_data_common in pex64igen.c.	binutils	Unchanged	8.0.0.27	9.0.0.20	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3810
2625	CVE-2018-1053	LOW	HIGH	In postgresql 9.3.x before 9.3.21, 9.4.x before 9.4.16, 9.5.x before 9.5.11, 9.6.x before 9.6.7 and 10.x before 10.2, pg_upgrade creates file in current working directory containing the output of `pg_dumpall -g` under umask which was in effect when the user invoked pg_upgrade, and not under 0077 which is normally used for other temporary files. This can allow an authenticated attacker to read or modify the one file, which may contain encrypted or unencrypted database passwords. The attack is infeasible if a directory mode blocks the attacker searching the current working directory or if the prevailing umask blocks the attacker opening the file.	postgresql	Unchanged	8.0.0.26	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3370
2626	CVE-2018-1052	MEDIUM	MEDIUM	Memory disclosure vulnerability in table partitioning was found in postgresql 10.x before 10.2, allowing an authenticated attacker to read arbitrary bytes of server memory via purpose-crafted insert to a partitioned table.	postgresql	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3381
2627	CVE-2018-1050	LOW	LOW	All versions of Samba from 4.0.0 onwards are vulnerable to a denial of service attack when the RPC spoolss service is configured to be run as an external daemon. Missing input sanitization checks on some of the input parameters to spoolss RPC calls could cause the print spooler service to crash.	samba	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3532
2628	CVE-2018-1049	MEDIUM	MEDIUM	In systemd prior to 234 a race condition exists between .mount and .automount units such that automount requests from kernel may not be serviced by systemd resulting in kernel holding the mountpoint and any processes that try to use said mount will hang. A race condition like this may lead to denial of service, until mount points are unmounted.	systemd	Unchanged	8.0.0.26	9.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3328
2629	CVE-2018-10393	MEDIUM	HIGH	bark_noise_hybridmp in psy.c in Xiph.Org libvorbis 1.3.6 has a stack-based buffer over-read.	libvorbis	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	10.18.44.1	10.19.45.1	Not vulnerable	LIN10-3858
2630	CVE-2018-10392	MEDIUM	HIGH	mapping0_forward in mapping0.c in Xiph.Org libvorbis 1.3.6 does not validate the number of channels, which allows remote attackers to cause a denial of service (heap-based buffer overflow or over-read) or possibly have unspecified other impact via a crafted file.	libvorbis	Unchanged	8.0.0.27	9.0.0.17	10.17.41.8	10.18.44.1	10.19.45.1	Not vulnerable	LIN10-3806
2631	CVE-2018-10373	MEDIUM	MEDIUM	concat_filename in dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.30, allows remote attackers to cause a denial of service (NULL pointer dereference and application crash) via a crafted binary file, as demonstrated by nm-new.	binutils	Unchanged	8.0.0.27	9.0.0.20	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3823
2632	CVE-2018-10372	MEDIUM	MEDIUM	process_cu_tu_index in dwarf.c in GNU Binutils 2.30 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted binary file, as demonstrated by readelf.	binutils	Unchanged	8.0.0.27	9.0.0.20	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3834
2633	CVE-2018-10360	MEDIUM	MEDIUM	The do_core_note function in readelf.c in libmagic.a in file 5.33 allows remote attackers to cause a denial of service (out-of-bounds read and application crash) via a crafted ELF file.	file	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4101
2634	CVE-2018-10323	MEDIUM	MEDIUM	The xfs_bmap_extents_to_btree function in fs/xfs/libxfs/xfs_bmap.c in the Linux kernel through 4.16.3 allows local users to cause a denial of service (xfs_bmapi_write NULL pointer dereference) via a crafted xfs image.	linux	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3819
2635	CVE-2018-10322	MEDIUM	MEDIUM	The xfs_dinode_verify function in fs/xfs/libxfs/xfs_inode_buf.c in the Linux kernel through 4.16.3 allows local users to cause a denial of service (xfs_ilock_attr_map_shared invalid pointer dereference) via a crafted xfs image.	linux	Unchanged	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3844
2636	CVE-2018-10316	MEDIUM	MEDIUM	Netwide Assembler (NASM) 2.14rc0 has an endless while loop in the assemble_file function of asm/nasm.c because of a globallineno integer overflow.	nasm	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3799
2637	CVE-2018-10254	MEDIUM	HIGH	Netwide Assembler (NASM) 2.13 has a stack-based buffer over-read in the disasm function of the disasm/disasm.c file. Remote attackers could leverage this vulnerability to cause a denial of service or possibly have unspecified other impact via a crafted ELF file.	nasm	Unchanged	8.0.0.30	9.0.0.21	10.17.41.15	Investigate	Not vulnerable	Not vulnerable	LIN10-3833
2638	CVE-2018-10244	High	CRITICAL	Suricata version 4.0.4 incorrectly handles the parsing of an EtherNet/IP PDU. A malformed PDU can cause the parsing code to read beyond the allocated data because DecodeENIPPDU in app-layer-enip-commmon.c has an integer overflow during a length check.	suricata	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3847
2639	CVE-2018-10243	High	CRITICAL	htp_parse_authorization_digest in htp_parsers.c in LibHTP 0.5.26 allows remote attackers to cause a heap-based buffer over-read via an authorization digest header.	libhtp	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	LIN1018-3852
2640	CVE-2018-10242	Medium	HIGH	Suricata version 4.0.4 incorrectly handles the parsing of the SSH banner. A malformed SSH banner can cause the parsing code to read beyond the allocated data because SSHParseBanner in app-layer-ssh.c lacks a length check.	suricata	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3848

This vulnerability appears to have been fixed in curl < 7.54.1 and curl >= 7.60.0.	curl	Unchanged	Not vulnerable	Not vulnerable	10.17.41.9	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4033
2679	CVE-2018-1000222	MEDIUM	HIGH	Libgd version 2.2.5 contains a Double Free Vulnerability vulnerability in gdImageBmpPtr Function that can result in Remote Code Execution . This attack appear to be exploitable via Specially Crafted Jpeg Image can trigger double free. This vulnerability appears to have been fixed in after commit ac16bdf2d41724b5a65255d4c28fb0ec46bc42f5.	gd	Unchanged	8.0.0.28	9.0.0.18	10.17.41.12	10.18.44.1	10.19.45.1	Not vulnerable	LIN10-4637
2680	CVE-2018-1000221	HIGH	CRITICAL	pkgconf version 1.5.0 to 1.5.2 contains a Buffer Overflow vulnerability in dequote() that can result in dequote() function returns 1-byte allocation if initial length is 0, leading to buffer overflow. This attack appear to be exploitable via specially crafted .pc file. This vulnerability appears to have been fixed in 1.5.3.	pkgconf	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4601
2681	CVE-2018-1000205	MEDIUM	MEDIUM	U-Boot contains a CWE-20: Improper Input Validation vulnerability in Verified boot signature validation that can result in Bypass verified boot. This attack appear to be exploitable via Specially crafted FIT image and special device memory functionality.	u-boot	Unchanged	Won't Fix	Won't Fix	Won't Fix	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4207
2682	CVE-2018-1000204	MEDIUM	MEDIUM	Linux Kernel version 3.18 to 4.16 incorrectly handles an SG_IO ioctl on /dev/sg0 with dxfer_direction=SG_DXFER_FROM_DEV and an empty 6-byte cmdp. This may lead to copying up to 1000 kernel heap pages to the userspace. This has been fixed upstream already: https://github.com/torvalds/linux/commit/a45b599ad808c3c982fdcdc12b0b8611c2f92824 The problem has limited scope, as users don't usually have permissions to access SCSI devices. On the other hand, e.g. the Nero user manual suggests doing `chmod o+r+w /dev/sg*` to make the devices accessible.	linux	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4224
2683	CVE-2018-1000200	MEDIUM	MEDIUM	The Linux Kernel versions 4.14, 4.15, and 4.16 has a null pointer dereference which can result in an out of memory (OOM) killing of large mlocked processes. The issue arises from an oom killed process's final thread calling exit_mmap(), which calls munlock_vma_pages_all() for mlocked vmas.This can happen synchronously with the oom reaper's unmap_page_range() since the vma's VM_LOCKED bit is cleared before munlocking (to determine if any other vmas share the memory and are mlocked).	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4102
2684	CVE-2018-1000199	MEDIUM	MEDIUM	The Linux Kernel version 3.18 contains a dangerous feature vulnerability in modify_user_hw_breakpoint() that can result in crash and possibly memory corruption. This attack appear to be exploitable via local code execution and the ability to use ptrace. This vulnerability appears to have been fixed in git commit f67b15037a7a50c57f72e69a6d59941ad90a0f0f.	linux	Unchanged	8.0.0.27	9.0.0.17	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4043
2685	CVE-2018-1000168	MEDIUM	HIGH	nghttp2 version >= 1.10.0 and nghttp2 <= v1.31.0 contains an Improper Input Validation CWE-20 vulnerability in ALTSVC frame handling that can result in segmentation fault leading to denial of service. This attack appears to be exploitable via network client. This vulnerability appears to have been fixed in >= 1.31.1.	nghttp2	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3934
2686	CVE-2018-1000164	MEDIUM	HIGH	gunicorn version 19.4.5 contains a CWE-113: Improper Neutralization of CRLF Sequences in HTTP Headers vulnerability in process_headers function in gunicorn/http/wsgi.py that can result in an attacker causing the server to return arbitrary HTTP headers. This vulnerability appears to have been fixed in 19.5.0.	gunicorn	Unchanged	8.0.0.26	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3855

	A	B	C	D	E	F	G	H	I	J	K	L	M
2687	CVE-2018-1000161	LOW	MEDIUM	nmap version 6.49BETA6 through 7.60, up to and including SVN revision 37147 contains a Directory Traversal vulnerability in NSE script http-fetch that can result in file overwrite as the user is running it. This attack appears to be exploitable via a victim that runs NSE script http-fetch against a malicious web site. This vulnerability appears to have been fixed in 7.7.	nmap	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3837
2688	CVE-2018-1000156	MEDIUM	HIGH	GNU Patch version 2.7.6 contains an input validation vulnerability when processing patch files, specifically the EDITOR_PROGRAM invocation (using ed) can result in code execution. This attack appear to be exploitable via a patch file processed via the patch utility. This is similar to FreeBSD's CVE-2015-1418 however although they share a common ancestry the code bases have diverged over time.	patch	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3687
2689	CVE-2018-1000155	HIGH	CRITICAL	OpenFlow version 1.0 onwards contains a Denial of Service and Improper authorization vulnerability in OpenFlow handshake: The DPID (DataPath IDentifier) in the features_reply message are inherently trusted by the controller. that can result in Denial of Service, Unauthorized Access, Network Instability. This attack appear to be exploitable via Network connectivity: the attacker must first establish a transport connection with the OpenFlow controller and then initiate the OpenFlow handshake.	openflow	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4057
2690	CVE-2018-1000140	HIGH	CRITICAL	rsyslog librelp version 1.2.14 and earlier contains a Buffer Overflow vulnerability in the checking of x509 certificates from a peer that can result in Remote code execution. This attack appear to be exploitable a remote attacker that can connect to rsyslog and trigger a stack buffer overflow by sending a specially crafted x509 certificate.	rsyslog&librelp	Unchanged	Not vulnerable	9.0.0.16	10.17.41.6	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3642
2691	CVE-2018-1000132	MEDIUM	CRITICAL	Mercurial version 4.5 and earlier contains a Incorrect Access Control (CWE-285) vulnerability in Protocol server that can result in Unauthorized data access. This attack appear to be exploitable via network connectivity. This vulnerability appears to have been fixed in 4.5.1.	mercurial	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3525
2692	CVE-2018-1000127	MEDIUM	HIGH	memcached version prior to 1.4.37 contains an Integer Overflow vulnerability in items.c:item_free() that can result in data corruption and deadlocks due to items existing in hash table being reused from free list. This attack appear to be exploitable via network connectivity to the memcached service. This vulnerability appears to have been fixed in 1.4.37 and later.	memcached	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3557
2693	CVE-2018-1000122	MEDIUM	CRITICAL	A buffer over-read exists in curl 7.20.0 to and including curl 7.58.0 in the RTSP+RTP handling code that allows an attacker to cause a denial of service or information leakage	curl	Unchanged	8.0.0.26	9.0.0.15	10.17.41.6	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3555

	A	B	C	D	E	F	G	H	I	J	K	L	M
2716	CVE-2018-1000030	MEDIUM	HIGH	Python 2.7.14 is vulnerable to a Heap-Buffer-Overflow as well as a Heap-Use-After-Free. Python versions prior to 2.7.14 may also be vulnerable and it appears that Python 2.7.17 and prior may also be vulnerable however this has not been confirmed. The vulnerability lies when multiply threads are handling large amounts of data. In both cases there is essentially a race condition that occurs. For the Heap-Buffer-Overflow, Thread 2 is creating the size for a buffer, but Thread1 is already writing to the buffer without knowing how much to write. So when a large amount of data is being processed, it is very easy to cause memory corruption using a Heap-Buffer-Overflow. As for the Use-After-Free, Thread3->Malloc->Thread1->Free's->Thread2-Re-uses-Free'd Memory. The PSRT has stated that this is not a security vulnerability due to the fact that the attacker must be able to run code, however in some situations, such as function as a service, this vulnerability can potentially be used by an attacker to violate a trust boundary, as such the DWF feels this issue deserves a CVE.	python	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3420
2717	CVE-2018-1000028	MEDIUM	HIGH	Linux kernel version after commit bdcf0a423ea1 - 4.15-rc4+, 4.14.8+, 4.9.76+, 4.4.111+ contains a Incorrect Access Control vulnerability in NFS server (nfsd) that can result in remote users reading or writing files they should not be able to via NFS. This attack appear to be exploitable via NFS server must export a filesystem with the rootsquash options enabled. This vulnerability appears to have been fixed in after commit 1995266727fa.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3439
2718	CVE-2018-1000026	MEDIUM	HIGH	Linux Linux kernel version at least v4.8 onwards, probably well before contains a Insufficient input validation vulnerability in bnx2x network card driver that can result in DoS: Network card firmware assertion takes card off-line. This attack appear to be exploitable via An attacker on a must pass a very large, specially crafted packet to the bnx2x card. This can be done from an untrusted guest VM..	linux	Unchanged	8.0.0.27	9.0.0.17	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3318
2719	CVE-2018-1000021	MEDIUM	HIGH	GIT version 2.15.1 and earlier contains a Input Validation Error vulnerability in Client that can result in problems including messing up terminal configuration to RCE. This attack appear to be exploitable via The user must interact with a malicious git server, (or have their traffic modified in a MITM attack).	git	Unchanged	Investigate	Investigate	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3423
2720	CVE-2018-1000007	MEDIUM	CRITICAL	libcurl 7.1 through 7.57.0 might accidentally leak authentication data to third parties. When asked to send custom headers in its HTTP requests, libcurl will send that set of headers first to the host in the initial URL but also, if asked to follow redirects and a 30X HTTP response code is returned, to the host mentioned in URL in the `Location:` response header value. Sending the same set of headers to subsequest hosts is in particular a problem for applications that pass on custom `Authorization:` headers, as this header often contains privacy sensitive information or data that could allow others to impersonate the libcurl-using client's request.	curl	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3225
2721	CVE-2018-1000005	MEDIUM	CRITICAL	libcurl 7.49.0 to and including 7.57.0 contains an out bounds read in code handling HTTP/2 trailers. It was reported (https://github.com/curl/curl/pull/2231) that reading an HTTP/2 trailer could mess up future trailers since the stored size was one byte less than required. The problem is that the code that creates HTTP/1-like headers from the HTTP/2 trailer data once appended a string like `:` to the target buffer, while this was recently changed to `: ` (a space was added after the colon) but the following math wasn't updated correspondingly. When accessed, the data is read out of bounds and causes either a crash or that the (too large) data gets passed to client write. This could lead to a denial-of-service situation or an information disclosure if someone has a service that echoes back or uses the trailers for something.	curl	Unchanged	Not vulnerable	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3221
2722	CVE-2018-1000004	HIGH	MEDIUM	In the Linux kernel 4.12, 3.10, 2.6 and possibly earlier versions a race condition vulnerability exists in the sound system, this can lead to a deadlock and denial of service condition.	linux	Unchanged	8.0.0.27	9.0.0.17	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3229
2723	CVE-2018-1000001	High	High	In glibc 2.26 and earlier there is confusion in the usage of getcwd() by realpath() which can be used to write before the destination buffer leading to a buffer underflow and potential code execution.	glibc	Unchanged	8.0.0.26	9.0.0.15	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3344
2724	CVE-2018-0739	MEDIUM	MEDIUM	Constructed ASN.1 types with a recursive definition (such as can be found in PKCS7) could eventually exceed the stack given malicious input with excessive recursion. This could result in a Denial Of Service attack. There are no such structures used within SSL/TLS that come from untrusted sources so this is considered safe. Fixed in OpenSSL 1.1.0h (Affected 1.1.0-1.1.0g). Fixed in OpenSSL 1.0.2o (Affected 1.0.2b-1.0.2n).	openssl	Unchanged	8.0.0.26	9.0.0.16	10.17.41.6	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3640
2725	CVE-2018-0737	MEDIUM	MEDIUM	The OpenSSL RSA Key generation algorithm has been shown to be vulnerable to a cache timing side channel attack. An attacker with sufficient access to mount cache timing attacks during the RSA key generation process could recover the private key. Fixed in OpenSSL 1.1.0i-dev (Affected 1.1.0-1.1.0h). Fixed in OpenSSL 1.0.2p-dev (Affected 1.0.2b-1.0.2o).	openssl	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3832
2726	CVE-2018-0735	MEDIUM	MEDIUM	The OpenSSL ECDSA signature algorithm has been shown to be vulnerable to a timing side channel attack. An attacker could use variations in the signing algorithm to recover the private key. Fixed in OpenSSL 1.1.0j-dev (Affected 1.1.0-1.1.0i). Fixed in OpenSSL 1.1.1a-dev (Affected 1.1.1).	openssl	Unchanged	Not vulnerable	Not vulnerable	10.17.41.13	10.18.44.3	Not vulnerable	Vulnerable	LIN10-4907

This is related to a lack of an integer overflow check in base/gsalloc.c.	ghostscript	Unchanged	8.0.0.21	9.0.0.9	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4809
2765	CVE-2017-9832	MEDIUM	Medium	An integer overflow vulnerability in ptp-pack.c (ptp_unpack_OPL function) of libmtp (version 1.1.12 and below) allows attackers to cause a denial of service (out-of-bounds memory access) or maybe remote code execution by inserting a mobile device into a personal computer through a USB cable.	libmtp	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4492
2766	CVE-2017-9831	MEDIUM	Medium	An integer overflow vulnerability in the ptp_unpack_EOS_CustomFuncEx function of the ptp-pack.c file of libmtp (version 1.1.12 and below) allows attackers to cause a denial of service (out-of-bounds memory access) or maybe remote code execution by inserting a mobile device into a personal computer through a USB cable.	libmtp	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4539
2767	CVE-2017-9815	MEDIUM	Medium	In LibTIFF 4.0.7, the TIFFReadDirEntryLong8Array function in libtiff/tif_dirread.c mishandles a malloc operation, which allows attackers to cause a denial of service (memory leak within the function _TIFFmalloc in tif_unix.c) via a crafted file.	libtiff	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4521
2768	CVE-2017-9814	Medium	High	cairo-truetype-subset.c in cairo 1.15.6 and earlier allows remote attackers to cause a denial of service (out-of-bounds read) because of mishandling of an unexpected malloc(0) call.	cairo	Unchanged	8.0.0.30	9.0.0.21	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-4839
2769	CVE-2017-9800	HIGH	Critical	A maliciously constructed svn+ssh:// URL would cause Subversion clients before 1.8.19, 1.9.x before 1.9.7, and 1.10.0.x through 1.10.0-alpha3 to run an arbitrary shell command. Such a URL could be generated by a malicious server, by a malicious user committing to a honest server (to attack another user of that server's repositories), or by a proxy server. The vulnerability affects all clients, including those that use file://, http://, and plain (untunneled) svn://.	subversion	Unchanged	8.0.0.22	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5151
2770	CVE-2017-9798	MEDIUM	High	Apache httpd allows remote attackers to read secret data from process memory if the Limit directive can be set in a user's .htaccess file, or if httpd.conf has certain misconfigurations, aka Optionsbleed. This affects the Apache HTTP Server through 2.2.34 and 2.4.x through 2.4.27. The attacker sends an unauthenticated OPTIONS HTTP request when attempting to read secret data. This is a use-after-free issue and thus secret data is not always sent, and the specific data depends on many factors including configuration. Exploitation with .htaccess can be blocked with a patch to the ap_limit_section function in server/core.c.	apache2	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5474
2771	CVE-2017-9789	Medium	High	When under stress, closing many connections, the HTTP/2 handling code in Apache httpd 2.4.26 would sometimes access memory after it has been freed, resulting in potentially erratic behaviour.	apache2	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4851
2772	CVE-2017-9788	Medium	Critical	In Apache httpd before 2.2.34 and 2.4.x before 2.4.27, the value placeholder in [Proxy-]Authorization headers of type 'Digest' was not initialized or reset before or between successive key=value assignments by mod_auth_digest. Providing an initial key with no '=' assignment could reflect the stale value of uninitialized pool memory used by the prior request, leading to leakage of potentially confidential information, and a segfault in other cases resulting in denial of service.	apache2	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4795
2773	CVE-2017-9782	MEDIUM	Medium	JasPer 2.0.12 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted image, related to the jp2_decode function in libjasper/jp2/jp2_dec.c.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4556
2774	CVE-2017-9778	MEDIUM	Medium	GNU Debugger (GDB) 8.0 and earlier fails to detect a negative length field in a DWARF section. A malformed section in an ELF binary or a core file can cause GDB to repeatedly allocate memory until a process limit is reached. This can, for example, impede efforts to analyze malware with GDB.	gdb	Unchanged	8.0.0.31	9.0.0.24	10.17.41.20	10.18.44.12	10.19.45.1	Not vulnerable	LIN9-4566

	A	B	C	D	E	F	G	H	I	J	K	L	M
2775	CVE-2017-9776	MEDIUM	High	Integer overflow leading to Heap buffer overflow in JBIG2Stream.cc in pdftocairo in Poppler before 0.56 allows remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted PDF document.	poppler	Unchanged	Won't Fix	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4551
2776	CVE-2017-9775	MEDIUM	Medium	Stack buffer overflow in GfxState.cc in pdftocairo in Poppler before 0.56 allows remote attackers to cause a denial of service (application crash) via a crafted PDF document.	poppler	Unchanged	Won't Fix	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4562
2777	CVE-2017-9766	MEDIUM	High	In Wireshark 2.2.7, PROFINET IO data with a high recursion depth allows remote attackers to cause a denial of service (stack exhaustion) in the dissect_IODWriteReq function in plugins/profinet/packet-dcerpc-pn-io.c.	wireshark	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4543
2778	CVE-2017-9763	MEDIUM	High	The grub_ext2_read_block function in fs/ext2.c in GNU GRUB before 2013-11-12, as used in shlr/grub/fs/ext2.c in radare2 1.5.0, allows remote attackers to cause a denial of service (excessive stack use and application crash) via a crafted binary file, related to use of a variable-size stack array.	grub	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4520
2779	CVE-2017-9756	Medium	High	The aarch64_ext_ldst_reglist function in opcodes/aarch64-dis.c in GNU Binutils 2.28 allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of this file during objdump -D execution.	binutils	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4513
2780	CVE-2017-9755	Medium	High	opcodes/i386-dis.c in GNU Binutils 2.28 does not consider the number of registers for bnd mode, which allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of this file during objdump -D execution.	binutils	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4487
2781	CVE-2017-9754	Medium	High	The process_otr function in bfd/versados.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, does not validate a certain offset, which allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of this file during objdump -D execution.	binutils	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4546
2782	CVE-2017-9753	Medium	High	The versados_mkobject function in bfd/versados.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, does not initialize a certain data structure, which allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of this file during objdump -D execution.	binutils	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4525
2783	CVE-2017-9752	Medium	High	bfd/vms-alpha.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of this file in the _bfd_vms_get_value and _bfd_vms_slurp_etir functions during objdump -D execution.	binutils	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4571
2784	CVE-2017-9751	Medium	High	opcodes/rl78-decode.opc in GNU Binutils 2.28 has an unbounded GETBYTE macro, which allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of this file during objdump -D execution.	binutils	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4507
2785	CVE-2017-9750	Medium	High	opcodes/rx-decode.opc in GNU Binutils 2.28 lacks bounds checks for certain scale arrays, which allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of this file during objdump -D execution.	binutils	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4523
2786	CVE-2017-9749	Medium	High	The *regs* macros in opcodes/bfin-dis.c in GNU Binutils 2.28 allow remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of this file during objdump -D execution.	binutils	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4554
2787	CVE-2017-9748	Medium	High	The ieee_object_p function in bfd/ieee.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, might allow remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of this file during objdump -D execution. NOTE: this may be related to a compiler bug.	binutils	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4531
2788	CVE-2017-9747	Medium	High	The ieee_archive_p function in bfd/ieee.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, might allow remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of this file during objdump -D execution. NOTE: this may be related to a compiler bug.	binutils	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4524
2789	CVE-2017-9746	Medium	High	The disassemble_bytes function in objdump.c in GNU Binutils 2.28 allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of rae insns printing for this file during objdump -D execution.	binutils	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4547
2790	CVE-2017-9745	Medium	High	The _bfd_vms_slurp_etir function in bfd/vms-alpha.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of this file during objdump -D execution.	binutils	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4519

	A	B	C	D	E	F	G	H	I	J	K	L	M
2791	CVE-2017-9744	Medium	High	The sh_elf_set_mach_from_flags function in bfd/elf32-sh.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of this file during objdump -D execution.	binutils	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4508
2792	CVE-2017-9743	Medium	High	The print_insn_score32 function in opcodes/score7-dis.c:552 in GNU Binutils 2.28 allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of this file during objdump -D execution.	binutils	Unchanged	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4569
2793	CVE-2017-9742	Medium	High	The score_opcodes function in opcodes/score7-dis.c in GNU Binutils 2.28 allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file, as demonstrated by mishandling of this file during objdump -D execution.	binutils	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4495
2794	CVE-2017-9740	MEDIUM	High	The xps_decode_font_char_imp function in xps/xpsfont.c in Artifex Ghostscript GhostXPS 9.22 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) or possibly have unspecified other impact via a crafted document.	ghostscript	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4852
2795	CVE-2017-9739	MEDIUM	High	The Ins_JMPR function in base/ttinterp.c in Artifex Ghostscript GhostXPS 9.22 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) or possibly have unspecified other impact via a crafted document.	ghostscript	Unchanged	8.0.0.21	9.0.0.9	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4760
2796	CVE-2017-9731	MEDIUM	High	In meta/classes/package_ipk.bbclass in Poky in poky-pyro 17.0.0 for Yocto Project through YP Core - Pyro 2.3, attackers can obtain sensitive information by reading a URL in a Source entry in an ipk package.	yocto	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4545
2797	CVE-2017-9727	MEDIUM	High	The gx_ttfReader__Read function in base/gxttfb.c in Artifex Ghostscript GhostXPS 9.22 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) or possibly have unspecified other impact via a crafted document.	ghostscript	Unchanged	8.0.0.21	9.0.0.9	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4812
2798	CVE-2017-9726	MEDIUM	High	The Ins_MDRP function in base/ttinterp.c in Artifex Ghostscript GhostXPS 9.22 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) or possibly have unspecified other impact via a crafted document.	ghostscript	Unchanged	8.0.0.21	9.0.0.9	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4759
2799	CVE-2017-9725	HIGH	High	In all Qualcomm products with Android releases from CAF using the Linux kernel, during DMA allocation, due to wrong data type of size, allocation size gets truncated which makes allocation succeed when it should fail.	linux	Unchanged	8.0.0.31	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Investigate	LIN1018-4337
2800	CVE-2017-9670	MEDIUM	High	An uninitialized stack variable vulnerability in load_tic_series() in set.c in gnuplot 5.2.rc1 allows an attacker to cause Denial of Service (Segmentation fault and Memory Corruption) or possibly have unspecified other impact when a victim opens a specially crafted file.	gnuplot	Unchanged	8.0.0.20	9.0.0.9	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4565
2801	CVE-2017-9620	MEDIUM	High	The xps_select_font_encoding function in xps/xpsfont.c in Artifex Ghostscript GhostXPS 9.22 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) or possibly have unspecified other impact via a crafted document, related to the xps_encode_font_char_imp function.	ghostscript	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4847
2802	CVE-2017-9619	MEDIUM	High	The xps_true_callback_glyph_name function in xps/xpsttf.c in Artifex Ghostscript GhostXPS 9.22 allows remote attackers to cause a denial of service (Segmentation Violation and application crash) via a crafted file.	ghostscript	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4767
2803	CVE-2017-9618	MEDIUM	High	The xps_load_sfnt_name function in xps/xpsfont.c in Artifex Ghostscript GhostXPS 9.22 allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted document.	ghostscript	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4830
2804	CVE-2017-9617	Medium	High	In Wireshark 2.2.7, deeply nested DAAP data may cause stack exhaustion (uncontrolled recursion) in the dissect_daap_one_tag function in epan/dissectors/packet-daap.c in the DAAP dissector.	wireshark	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4528
2805	CVE-2017-9616	Medium	Medium	In Wireshark 2.2.7, overly deep mp4 chunks may cause stack exhaustion (uncontrolled recursion) in the dissect_mp4_box function in epan/dissectors/file-mp4.c.	wireshark	Unchanged	8.0.0.28	9.0.0.19	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4498
2806	CVE-2017-9614	MEDIUM	High	The fill_input_buffer function in jdatasrc.c in libjpeg-turbo 1.5.1 allows remote attackers to cause a denial of service (invalid memory access and application crash) or possibly have unspecified other impact via a crafted jpg file.	libjpeg-turbo	Unchanged	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4766
2807	CVE-2017-9612	MEDIUM	High	The Ins_IP function in base/ttinterp.c in Artifex Ghostscript GhostXPS 9.22 allows remote attackers to cause a denial of service (use-after-free and application crash) or possibly have unspecified other impact via a crafted document.	ghostscript	Unchanged	8.0.0.21	9.0.0.9	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4783
2808	CVE-2017-9611	MEDIUM	High	The Ins_MIRP function in base/ttinterp.c in Artifex Ghostscript GhostXPS 9.22 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) or possibly have unspecified other impact via a crafted document.	ghostscript	Unchanged	8.0.0.21	9.0.0.9	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4848
2809	CVE-2017-9610	MEDIUM	High	The xps_load_sfnt_name function in xps/xpsfont.c in Artifex Ghostscript GhostXPS 9.22 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) or possibly have unspecified other impact via a crafted document.	ghostscript	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4829
2810	CVE-2017-9608	MEDIUM	Medium	The dnxhd decoder in FFmpeg before 3.2.6, and 3.3.x before 3.3.3 allows remote attackers to cause a denial of service (NULL pointer dereference) via a crafted mov file.	ffmpeg	Unchanged	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2945

	A	B	C	D	E	F	G	H	I	J	K	L	M
2811	CVE-2017-9605	MEDIUM	Medium	The vmw_gb_surface_define_ioctl function (accessible via DRM_IOCTL_VMW_GB_SURFACE_CREATE) in drivers/gpu/drm/vmwgfx/vmwgfx_surface.c in the Linux kernel through 4.11.4 defines a backup_handle variable but does not give it an initial value. If one attempts to create a GB surface, with a previously allocated DMA buffer to be used as a backup buffer, the backup_handle variable does not get written to and is then later returned to user space, allowing local users to obtain sensitive information from uninitialized kernel memory via a crafted ioctl call.	linux	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4496
2812	CVE-2017-9545	MEDIUM	Medium	The next_text function in src/libmpg123/id3.c in mpg123 1.24.0 allows remote attackers to cause a denial of service (buffer over-read) via a crafted mp3 file.	mpg123	Unchanged	Won't Fix	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4790
2813	CVE-2017-9526	MEDIUM	Medium	In Libgcrypt before 1.7.7, an attacker who learns the EdDSA session key (from side-channel observation during the signing process) can easily recover the long-term secret key. 1.7.7 makes a cipher/ecc-eddsa.c change to store this session key in secure memory, to ensure that constant-time point operations are used in the MPI library.	libgcrypt	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4434
2814	CVE-2017-9524	MEDIUM	High	The qemu-nbd server in QEMU (aka Quick Emulator), when built with the Network Block Device (NBD) Server support, allows remote attackers to cause a denial of service (segmentation fault and server crash) by leveraging failure to ensure that all initialization occurs before talking to a client in the nbd_negotiate function.	qemu	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4637
2815	CVE-2017-9503	Low	Medium	QEMU (aka Quick Emulator), when built with MegaRAID SAS 8708EM2 Host Bus Adapter emulation support, allows local guest OS privileged users to cause a denial of service (NULL pointer dereference and QEMU process crash) via vectors involving megasas command processing.	qemu	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4537
2816	CVE-2017-9502	MEDIUM	Medium	In curl before 7.54.1 on Windows and DOS, libcurl's default protocol function, which is the logic that allows an application to set which protocol libcurl should attempt to use when given a URL without a scheme part, had a flaw that could lead to it overwriting a heap based memory buffer with seven bytes. If the default protocol is specified to be FILE or a file: URL lacks two slashes, the given URL starts with a drive letter, and libcurl is built for Windows or DOS, then libcurl would copy the path 7 bytes off, so that the end of the given path would write beyond the malloc buffer (7 bytes being the length in bytes of the ascii string file://).	curl	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4559
2817	CVE-2017-9501	MEDIUM	Medium	In ImageMagick 7.0.5-7 Q16, an assertion failure was found in the function LockSemaphoreInfo, which allows attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4380
2818	CVE-2017-9500	MEDIUM	Medium	In ImageMagick 7.0.5-8 Q16, an assertion failure was found in the function ResetImageProfileIterator, which allows attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4419
2819	CVE-2017-9499	MEDIUM	Medium	In ImageMagick 7.0.5-7 Q16, an assertion failure was found in the function SetPixelChannelAttributes, which allows attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4404
2820	CVE-2017-9469	MEDIUM	High	In Irssi before 1.0.3, when receiving certain incorrectly quoted DCC files, it tries to find the terminating quote one byte before the allocated memory. Thus, remote attackers might be able to cause a crash.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4411
2821	CVE-2017-9468	MEDIUM	High	In Irssi before 1.0.3, when receiving a DCC message without source nick/host, it attempts to dereference a NULL pointer. Thus, remote IRC servers can cause a crash.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4438
2822	CVE-2017-9462	HIGH	High	In Mercurial before 4.1.3, hg serve --stdio allows remote authenticated users to launch the Python debugger, and consequently execute arbitrary code, by using --debugger as a repository name.	mercurial	Unchanged	8.0.0.19	9.0.0.8	10.0.0.0	Won't Fix	Won't Fix	Won't Fix	LIN9-4396
2823	CVE-2017-9461	HIGH	High	smbd in Samba before 4.4.10 and 4.5.x before 4.5.6 has a denial of service vulnerability (fd_open_atomic infinite loop with high CPU usage and memory consumption) due to wrongly handling dangling symlinks.	samba	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4407
2824	CVE-2017-9445	MEDIUM	High	In systemd through 233, certain sizes passed to dns_packet_new in systemd-resolved can cause it to allocate a buffer that's too small. A malicious DNS server can exploit this via a response with a specially crafted TCP payload to trick systemd-resolved into allocating a buffer that's too small, and subsequently write arbitrary data beyond the end of it.	systemd	Unchanged	Investigate	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4534
2825	CVE-2017-9440	MEDIUM	Medium	In ImageMagick 7.0.5-5, a memory leak was found in the function ReadPSDChannel in coders/psd.c, which allows attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4418
2826	CVE-2017-9439	MEDIUM	Medium	In ImageMagick 7.0.5-5, a memory leak was found in the function ReadPDBImage in coders/pdb.c, which allows attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4435
2827	CVE-2017-9412	MEDIUM	Medium	The unpack_read_samples function in frontend/get_audio.c in LAME 3.99.5 allows remote attackers to cause a denial of service (invalid memory read and application crash) via a crafted wav file.	lame	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4792
2828	CVE-2017-9411	MEDIUM	Medium	The fill_buffer_resample function in libmp3lame/util.c in LAME 3.99.5 allows remote attackers to cause a denial of service (invalid memory read and application crash) via a crafted wav file.	lame	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4800
2829	CVE-2017-9410	MEDIUM	Medium	The fill_buffer_resample function in libmp3lame/util.c in LAME 3.99.5 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted wav file.	lame	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4862
2830	CVE-2017-9409	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadMPCImage function in mpc.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4403

	A	B	C	D	E	F	G	H	I	J	K	L	M
2831	CVE-2017-9408	MEDIUM	Medium	In Poppler 0.54.0, a memory leak vulnerability was found in the function Object::initArray in Object.cc, which allows attackers to cause a denial of service via a crafted file.	poppler	Unchanged	Won't Fix	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4384
2832	CVE-2017-9407	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadPALMImage function in palm.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4421
2833	CVE-2017-9406	MEDIUM	Medium	In Poppler 0.54.0, a memory leak vulnerability was found in the function gmalloc in gmem.cc, which allows attackers to cause a denial of service via a crafted file.	poppler	Unchanged	Won't Fix	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4399
2834	CVE-2017-9405	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadICONImage function in icon.c:452 allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4394
2835	CVE-2017-9404	MEDIUM	Medium	In LibTIFF 4.0.7, a memory leak vulnerability was found in the function OJPEGReadHeaderInfoSecTablesQTable in tif_ojpeg.c, which allows attackers to cause a denial of service via a crafted file.	libtiff	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4379
2836	CVE-2017-9403	MEDIUM	Medium	In LibTIFF 4.0.7, a memory leak vulnerability was found in the function TIFFReadDirEntryLong8Array in tif_dirread.c, which allows attackers to cause a denial of service via a crafted file.	libtiff	Unchanged	8.0.0.19	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4409
2837	CVE-2017-9375	Low	Medium	QEMU (aka Quick Emulator), when built with USB xHCI controller emulator support, allows local guest OS privileged users to cause a denial of service (infinite recursive call) via vectors involving control transfer descriptors sequencing.	qemu	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4503
2838	CVE-2017-9374	Low	Medium	Memory leak in QEMU (aka Quick Emulator), when built with USB EHCI Emulation support, allows local guest OS privileged users to cause a denial of service (memory consumption) by repeatedly hot-unplugging the device.	qemu	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4485
2839	CVE-2017-9373	Low	Medium	Memory leak in QEMU (aka Quick Emulator), when built with IDE AHCI Emulation support, allows local guest OS privileged users to cause a denial of service (memory consumption) by repeatedly hot-unplugging the AHCI device.	qemu	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4516
2840	CVE-2017-9354	MEDIUM	High	In Wireshark 2.2.0 to 2.2.6 and 2.0.0 to 2.0.12, the RGMP dissector could crash. This was addressed in epan/dissectors/packet-rgmp.c by validating an IPv4 address.	wireshark	Unchanged	8.0.0.22	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4417
2841	CVE-2017-9353	MEDIUM	High	In Wireshark 2.2.0 to 2.2.6, the IPv6 dissector could crash. This was addressed in epan/dissectors/packet-ipv6.c by validating an IPv6 address.	wireshark	Unchanged	8.0.0.22	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4428
2842	CVE-2017-9352	HIGH	High	In Wireshark 2.2.0 to 2.2.6 and 2.0.0 to 2.0.12, the Bazaar dissector could go into an infinite loop. This was addressed in epan/dissectors/packet-bzr.c by ensuring that backwards parsing cannot occur.	wireshark	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4406
2843	CVE-2017-9351	MEDIUM	High	In Wireshark 2.2.0 to 2.2.6 and 2.0.0 to 2.0.12, the DHCP dissector could read past the end of a buffer. This was addressed in epan/dissectors/packet-bootp.c by extracting the Vendor Class Identifier more carefully.	wireshark	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4392
2844	CVE-2017-9350	HIGH	High	In Wireshark 2.2.0 to 2.2.6 and 2.0.0 to 2.0.12, the openSAFETY dissector could crash or exhaust system memory. This was addressed in epan/dissectors/packet-opensafety.c by checking for a negative length.	wireshark	Unchanged	8.0.0.22	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4424
2845	CVE-2017-9349	HIGH	High	In Wireshark 2.2.0 to 2.2.6 and 2.0.0 to 2.0.12, the DICOM dissector has an infinite loop. This was addressed in epan/dissectors/packet-dcm.c by validating a length value.	wireshark	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4377
2846	CVE-2017-9348	MEDIUM	High	In Wireshark 2.2.0 to 2.2.6, the DOF dissector could read past the end of a buffer. This was addressed in epan/dissectors/packet-dof.c by validating a size value.	wireshark	Unchanged	Not vulnerable	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4388
2847	CVE-2017-9347	MEDIUM	High	In Wireshark 2.2.0 to 2.2.6, the ROS dissector could crash with a NULL pointer dereference. This was addressed in epan/dissectors/asn1/ros/packet-ros-template.c by validating an OID.	wireshark	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4402
2848	CVE-2017-9346	HIGH	High	In Wireshark 2.2.0 to 2.2.6 and 2.0.0 to 2.0.12, the SoulSeek dissector could go into an infinite loop. This was addressed in epan/dissectors/packet-slsk.c by making loop bounds more explicit.	wireshark	Unchanged	8.0.0.22	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4429
2849	CVE-2017-9345	HIGH	High	In Wireshark 2.2.0 to 2.2.6 and 2.0.0 to 2.0.12, the DNS dissector could go into an infinite loop. This was addressed in epan/dissectors/packet-dns.c by trying to detect self-referencing pointers.	wireshark	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4383
2850	CVE-2017-9344	MEDIUM	High	In Wireshark 2.2.0 to 2.2.6 and 2.0.0 to 2.0.12, the Bluetooth L2CAP dissector could divide by zero. This was addressed in epan/dissectors/packet-btl2cap.c by validating an interval value.	wireshark	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4395
2851	CVE-2017-9343	MEDIUM	High	In Wireshark 2.2.0 to 2.2.6 and 2.0.0 to 2.0.12, the MSNIP dissector misuses a NULL pointer. This was addressed in epan/dissectors/packet-msnip.c by validating an IPv4 address.	wireshark	Unchanged	8.0.0.22	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4422
2852	CVE-2017-9330	LOW	Medium	QEMU (aka Quick Emulator), when built with the USB OHCI Emulation support, allows local guest OS users to cause a denial of service (infinite loop) by leveraging an incorrect return value.	qemu	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4431
2853	CVE-2017-9310	LOW	Medium	QEMU (aka Quick Emulator), when built with the e1000e NIC emulation support, allows local guest OS privileged users to cause a denial of service (infinite loop) via vectors related to setting the initial receive / transmit descriptor head (TDH/RDH) outside the allocated descriptor buffer.	qemu	Unchanged	Not vulnerable	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4410
2854	CVE-2017-9287	MEDIUM	Medium	servers/slapd/back-mdb/search.c in OpenLDAP through 2.4.44 is prone to a double free vulnerability. A user with access to search the directory can crash slapd by issuing a search including the Paged Results control with a page size of 0.	openldap	Unchanged	8.0.0.28	9.0.0.18	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4584
2855	CVE-2017-9265	HIGH	Critical	In Open vSwitch (OvS) v2.7.0, there is a buffer over-read while parsing the group mod OpenFlow message sent from the controller in `lib/ofp-util.c` in the function `ofputil_pull_ofp15_group_mod`.	openvswitch	Unchanged	8.0.0.28	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4398

	A	B	C	D	E	F	G	H	I	J	K	L	M
2856	CVE-2017-9264	HIGH	Critical	In lib/conntrack.c in the firewall implementation in Open vSwitch (OvS) 2.6.1, there is a buffer over-read while parsing malformed TCP, UDP, and IPv6 packets in the functions `extract_l3_ipv6`, `extract_l4_tcp`, and `extract_l4_udp` that can be triggered remotely.	openvswitch	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4390
2857	CVE-2017-9263	LOW	Medium	In Open vSwitch (OvS) 2.7.0, while parsing an OpenFlow role status message, there is a call to the abort() function for undefined role status reasons in the function `ofp_print_role_status_message` in `lib/ofp-print.c` that may be leveraged toward a remote DoS attack by a malicious switch.	openvswitch	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4433
2858	CVE-2017-9262	MEDIUM	Medium	In ImageMagick 7.0.5-6 Q16, the ReadJNGImage function in coders/png.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4426
2859	CVE-2017-9261	MEDIUM	Medium	In ImageMagick 7.0.5-6 Q16, the ReadMNGImage function in coders/png.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4387
2860	CVE-2017-9257	HIGH	Medium	The mp4ff_read_ctts function in common/mp4ff/mp4atom.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.7 allows remote attackers to cause a denial of service (large loop and CPU consumption) via a crafted mp4 file.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4572
2861	CVE-2017-9256	HIGH	Medium	The mp4ff_read_stco function in common/mp4ff/mp4atom.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.7 allows remote attackers to cause a denial of service (large loop and CPU consumption) via a crafted mp4 file.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4502
2862	CVE-2017-9255	HIGH	Medium	The mp4ff_read_stsc function in common/mp4ff/mp4atom.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.7 allows remote attackers to cause a denial of service (large loop and CPU consumption) via a crafted mp4 file.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4509
2863	CVE-2017-9254	HIGH	Medium	The mp4ff_read_stts function in common/mp4ff/mp4atom.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.7 allows remote attackers to cause a denial of service (large loop and CPU consumption) via a crafted mp4 file.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4530
2864	CVE-2017-9253	HIGH	Medium	The mp4ff_read_stsd function in common/mp4ff/mp4atom.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.7 allows remote attackers to cause a denial of service (large loop and CPU consumption) via a crafted mp4 file.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4500
2865	CVE-2017-9242	MEDIUM	Medium	The __ip6_append_data function in net/ipv6/ip6_output.c in the Linux kernel through 4.11.3 is too late in checking whether an overwrite of an skb data structure may occur, which allows local users to cause a denial of service (system crash) via crafted system calls.	linux	Unchanged	8.0.0.20	9.0.0.9	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4423
2866	CVE-2017-9233	MEDIUM	High	XML External Entity vulnerability in libexpat 2.2.0 and earlier (Expat XML Parser Library) allows attackers to put the parser in an infinite loop using a malformed external entity definition from an external DTD.	expat	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4717
2867	CVE-2017-9229	MEDIUM	High	An issue was discovered in Oniguruma 6.2.0, as used in Oniguruma-mod in Ruby through 2.4.1 and mbstring in PHP through 7.1.5. A SIGSEGV occurs in left_adjust_char_head() during regular expression compilation. Invalid handling of reg->dmax in forward_search_range() could result in an invalid pointer dereference, normally as an immediate denial-of-service condition.	ruby & php	Unchanged	8.0.0.20	9.0.0.9	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4695
2868	CVE-2017-9228	HIGH	Critical	An issue was discovered in Oniguruma 6.2.0, as used in Oniguruma-mod in Ruby through 2.4.1 and mbstring in PHP through 7.1.5. A heap out-of-bounds write occurs in bitset_set_range() during regular expression compilation due to an uninitialized variable from an incorrect state transition. An incorrect state transition in parse_char_class() could create an execution path that leaves a critical local variable uninitialized until it's used as an index, resulting in an out-of-bounds write memory corruption.	ruby & php	Unchanged	8.0.0.20	9.0.0.9	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4694
2869	CVE-2017-9227	HIGH	Critical	An issue was discovered in Oniguruma 6.2.0, as used in Oniguruma-mod in Ruby through 2.4.1 and mbstring in PHP through 7.1.5. A stack out-of-bounds read occurs in mbc_enc_len() during regular expression searching. Invalid handling of reg->dmin in forward_search_range() could result in an invalid pointer dereference, as an out-of-bounds read from a stack buffer.	ruby & php	Unchanged	8.0.0.20	9.0.0.9	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4696
2870	CVE-2017-9226	HIGH	Critical	An issue was discovered in Oniguruma 6.2.0, as used in Oniguruma-mod in Ruby through 2.4.1 and mbstring in PHP through 7.1.5. A heap out-of-bounds write or read occurs in next_state_val() during regular expression compilation. Octal numbers larger than 0xff are not handled correctly in fetch_token() and fetch_token_in_cc(). A malformed regular expression containing an octal number in the form of '\700' would produce an invalid code point value larger than 0xff in next_state_val(), resulting in an out-of-bounds write memory corruption.	ruby & php	Unchanged	8.0.0.20	9.0.0.9	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4698
2871	CVE-2017-9224	HIGH	Critical	An issue was discovered in Oniguruma 6.2.0, as used in Oniguruma-mod in Ruby through 2.4.1 and mbstring in PHP through 7.1.5. A stack out-of-bounds read occurs in match_at() during regular expression searching. A logical error involving order of validation and access in match_at() could result in an out-of-bounds read from a stack buffer.	ruby & php	Unchanged	8.0.0.20	9.0.0.9	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4697
2872	CVE-2017-9223	MEDIUM	Medium	The mp4ff_read_stts function in common/mp4ff/mp4atom.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.7 allows remote attackers to cause a denial of service (invalid memory read and application crash) via a crafted mp4 file.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4497

	A	B	C	D	E	F	G	H	I	J	K	L	M
2873	CVE-2017-9222	HIGH	Medium	The mp4ff_parse_tag function in common/mp4ff/mp4meta.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.7 allows remote attackers to cause a denial of service (infinite loop and CPU consumption) via a crafted mp4 file.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4555
2874	CVE-2017-9221	MEDIUM	Medium	The mp4ff_read_mdhd function in common/mp4ff/mp4atom.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.7 allows remote attackers to cause a denial of service (invalid memory read and application crash) via a crafted mp4 file.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4505
2875	CVE-2017-9220	MEDIUM	Medium	The mp4ff_read_stco function in common/mp4ff/mp4atom.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.7 allows remote attackers to cause a denial of service (memory allocation error) via a crafted mp4 file.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4560
2876	CVE-2017-9219	MEDIUM	Medium	The mp4ff_read_stsc function in common/mp4ff/mp4atom.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.7 allows remote attackers to cause a denial of service (memory allocation error and application crash) via a crafted mp4 file.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4548
2877	CVE-2017-9218	MEDIUM	Medium	The mp4ff_read_stsd function in common/mp4ff/mp4atom.c in Freeware Advanced Audio Decoder 2 (FAAD2) 2.7 allows remote attackers to cause a denial of service (invalid memory read and application crash) via a crafted mp4 file.	faad2	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4536
2878	CVE-2017-9217	MEDIUM	High	systemd-resolved through 233 allows remote attackers to cause a denial of service (daemon crash) via a crafted DNS response with an empty question section.	systemd	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4415
2879	CVE-2017-9216	MEDIUM	Medium	libjbig2dec.a in Artifex jbig2dec 0.13, as used in MuPDF and Ghostscript, has a NULL pointer dereference in the jbig2_huffman_get function in jbig2_huffman.c. For example, the jbig2dec utility will crash (segmentation fault) when parsing an invalid file.	ghostscript	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4298
2880	CVE-2017-9214	HIGH	Critical	In Open vSwitch (OvS) 2.7.0, while parsing an OFPT_QUEUE_GET_CONFIG_REPLY type OFP 1.0 message, there is a buffer over-read that is caused by an unsigned integer underflow in the function `ofputil_pull_queue_get_config_reply10` in `lib/ofp-util.c`.	openvswitch	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4408
2881	CVE-2017-9211	MEDIUM	Medium	The crypto_skcipher_init_tfm function in crypto/skcipher.c in the Linux kernel through 4.11.2 relies on a setkey function that lacks a key-size check, which allows local users to cause a denial of service (NULL pointer dereference) via a crafted application.	linux	Unchanged	Not vulnerable	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4296
2882	CVE-2017-9150	LOW	Medium	The do_check function in kernel/bpf/verifier.c in the Linux kernel before 4.11.1 does not make the allow_ptr_leaks value available for restricting the output of the print_bpf_insn function, which allows local users to obtain sensitive address information via crafted bpf system calls.	linux	Unchanged	Not vulnerable	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4294
2883	CVE-2017-9148	HIGH	Critical	The TLS session cache in FreeRADIUS 2.1.1 through 2.1.7, 3.0.x before 3.0.14, 3.1.x before 2017-02-04, and 4.0.x before 2017-02-04 fails to reliably prevent resumption of an unauthenticated session, which allows remote attackers (such as malicious 802.1X supplicants) to bypass authentication via PEAP or TTLS.	freeradius	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4381
2884	CVE-2017-9147	MEDIUM	Medium	LibTIFF 4.0.7 has an invalid read in the _TIFFVGetField function in tif_dir.c, which might allow remote attackers to cause a denial of service (crash) via a crafted TIFF file.	libtiff	Unchanged	8.0.0.19	9.0.0.8	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-4277
2885	CVE-2017-9144	MEDIUM	Medium	In ImageMagick 7.0.5-5, a crafted RLE image can trigger a crash because of incorrect EOF handling in coders/rle.c.	imagemagick	Unchanged	8.0.0.19	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4301
2886	CVE-2017-9143	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadARTImage function in coders/art.c allows attackers to cause a denial of service (memory leak) via a crafted .art file.	imagemagick	Unchanged	8.0.0.19	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4312
2887	CVE-2017-9142	MEDIUM	Medium	In ImageMagick 7.0.5-7 Q16, a crafted file could trigger an assertion failure in the WriteBlob function in MagickCore/blob.c because of missing checks in the ReadOneJNGImage function in coders/png.c.	imagemagick	Unchanged	8.0.0.19	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4307
2888	CVE-2017-9141	MEDIUM	Medium	In ImageMagick 7.0.5-7 Q16, a crafted file could trigger an assertion failure in the ResetImageProfileIterator function in MagickCore/profile.c because of missing checks in the ReadDDSImage function in coders/dds.c.	imagemagick	Unchanged	8.0.0.19	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4304
2889	CVE-2017-9120	HIGH	CRITICAL	PHP 7.x through 7.1.5 allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a long string because of an Integer overflow in mysqli_real_escape_string.	php	Unchanged	Not vulnerable	Not vulnerable	10.17.41.11	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4553
2890	CVE-2017-9119	HIGH	Critical	The i_zval_ptr_dtor function in Zend/zend_variables.h in PHP 7.1.5 allows attackers to cause a denial of service (memory consumption and application crash) or possibly have unspecified other impact by triggering crafted operations on array data structures.	php	Unchanged	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4311
2891	CVE-2017-9118	MEDIUM	HIGH	PHP 7.1.5 has an Out of bounds access in php_pcre_replace_impl via a crafted preg_replace call.	php	Unchanged	Not vulnerable	Not vulnerable	Vulnerable	Investigate	Not vulnerable	Not vulnerable	LIN10-4545
2892	CVE-2017-9117	HIGH	Critical	In LibTIFF 4.0.7, the program processes BMP images without verifying that biWidth and biHeight in the bitmap-information header match the actual input, leading to a heap-based buffer over-read in bmp2tiff.	libtiff	Unchanged	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4288
2893	CVE-2017-9098	MEDIUM	High	ImageMagick before 7.0.5-2 and GraphicsMagick before 1.3.24 use uninitialized memory in the RLE decoder, allowing an attacker to leak sensitive information from process memory space, as demonstrated by remote attacks against ImageMagick code in a long-running server process that converts image data on behalf of multiple users. This is caused by a missing initialization step in the ReadRLEImage function in coders/rle.c.	imagemagick	Unchanged	8.0.0.19	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4310

	A	B	C	D	E	F	G	H	I	J	K	L	M
2894	CVE-2017-9083	MEDIUM	Medium	poppler 0.54.0, as used in Evince and other products, has a NULL pointer dereference in the JPXStream::readUByte function in JPXStream.cc. For example, the perf_test utility will crash (segmentation fault) when parsing an invalid PDF file.	poppler	Unchanged	Won't Fix	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4292
2895	CVE-2017-9079	MEDIUM	Medium	Dropbear before 2017.75 might allow local users to read certain files as root, if the file has the authorized_keys file format with a command= option. This occurs because ~/.ssh/authorized_keys is read with root privileges and symlinks are followed.	dropbear	Unchanged	8.0.0.19	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4281
2896	CVE-2017-9078	HIGH	High	The server in Dropbear before 2017.75 might allow post-authentication root remote code execution because of a double free in cleanup of TCP listeners when the -a option is enabled.	dropbear	Unchanged	8.0.0.19	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4279
2897	CVE-2017-9077	HIGH	High	The tcp_v6_syn_recv_sock function in net/ipv6/tcp_ipv6.c in the Linux kernel through 4.11.1 mishandles inheritance, which allows local users to cause a denial of service or possibly have unspecified other impact via crafted system calls, a related issue to CVE-2017-8890.	linux	Unchanged	Investigate	Investigate	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4305
2898	CVE-2017-9076	HIGH	High	The dccp_v6_request_recv_sock function in net/dccp/ipv6.c in the Linux kernel through 4.11.1 mishandles inheritance, which allows local users to cause a denial of service or possibly have unspecified other impact via crafted system calls, a related issue to CVE-2017-8890.	linux	Unchanged	8.0.0.19	9.0.0.8	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4285
2899	CVE-2017-9075	HIGH	High	The sctp_v6_create_accept_sk function in net/sctp/ipv6.c in the Linux kernel through 4.11.1 mishandles inheritance, which allows local users to cause a denial of service or possibly have unspecified other impact via crafted system calls, a related issue to CVE-2017-8890.	linux	Unchanged	8.0.0.19	9.0.0.8	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4297
2900	CVE-2017-9074	HIGH	High	The IPv6 fragmentation implementation in the Linux kernel through 4.11.1 does not consider that the nexthdr field may be associated with an invalid option, which allows local users to cause a denial of service (out-of-bounds read and BUG) or possibly have unspecified other impact via crafted socket and send system calls.	linux	Unchanged	8.0.0.19	9.0.0.8	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4291
2901	CVE-2017-9060	MEDIUM	Medium	Memory leak in the virtio_gpu_set_scanout function in hw/display/virtio-gpu.c in QEMU (aka Quick Emulator) allows local guest OS users to cause a denial of service (memory consumption) via a large number of VIRTIO_GPU_CMD_SET_SCANOUT: commands.	qemu	Unchanged	Not vulnerable	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4405
2902	CVE-2017-9059	MEDIUM	Medium	The NFSv4 implementation in the Linux kernel through 4.11.1 allows local users to cause a denial of service (resource consumption) by leveraging improper channel callback shutdown when unmounting an NFSv4 filesystem, aka a module reference and kernel daemon leak.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4275
2903	CVE-2017-9051	HIGH	Critical	libav before 12.1 is vulnerable to an invalid read of size 1 due to NULL pointer dereferencing in the nsv_read_chunk function in libavformat/nsvdec.c.	libav	Unchanged	8.0.0.19	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4280
2904	CVE-2017-9050	MEDIUM	High	libxml2 20904-GITv2.9.4-16-g0741801 is vulnerable to a heap-based buffer over-read in the xmlDictAddString function in dict.c. This vulnerability causes programs that use libxml2, such as PHP, to crash. This vulnerability exists because of an incomplete fix for CVE-2016-1839.	libxml2	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4289
2905	CVE-2017-9049	MEDIUM	High	libxml2 20904-GITv2.9.4-16-g0741801 is vulnerable to a heap-based buffer over-read in the xmlDictComputeFastKey function in dict.c. This vulnerability causes programs that use libxml2, such as PHP, to crash. This vulnerability exists because of an incomplete fix for libxml2 Bug 759398.	libxml2	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4282
2906	CVE-2017-9048	MEDIUM	High	libxml2 20904-GITv2.9.4-16-g0741801 is vulnerable to a stack-based buffer overflow. The function xmlSnprintfElementContent in valid.c is supposed to recursively dump the element content definition into a char buffer 'buf' of size 'size'. At the end of the routine, the function may strcat two more characters without checking whether the current strlen(buf) + 2 < size. This vulnerability causes programs that use libxml2, such as PHP, to crash.	libxml2	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4314
2907	CVE-2017-9047	MEDIUM	High	A buffer overflow was discovered in libxml2 20904-GITv2.9.4-16-g0741801. The function xmlSnprintfElementContent in valid.c is supposed to recursively dump the element content definition into a char buffer 'buf' of size 'size'. The variable len is assigned strlen(buf). If the content->type is XML_ELEMENT_CONTENT_ELEMENT, then (i) the content->prefix is appended to buf (if it actually fits) whereupon (ii) content->name is written to the buffer. However, the check for whether the content->name actually fits also uses 'len' rather than the updated buffer length strlen(buf). This allows us to write about size many bytes beyond the allocated memory. This vulnerability causes programs that use libxml2, such as PHP, to crash.	libxml2	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4302
2908	CVE-2017-9044	MEDIUM	Medium	The print_symbol_for_build_attribute function in readelf.c in GNU Binutils 2017-04-12 allows remote attackers to cause a denial of service (invalid read and SEGV) via a crafted ELF file.	binutils	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4286
2909	CVE-2017-9043	MEDIUM	High	readelf.c in GNU Binutils 2017-04-12 has a shift exponent too large for type unsigned long issue, which might allow remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted ELF file.	binutils	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4300
2910	CVE-2017-9042	MEDIUM	High	readelf.c in GNU Binutils 2017-04-12 has a cannot be represented in type long issue, which might allow remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted ELF file.	binutils	Unchanged	8.0.0.23	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4315

	A	B	C	D	E	F	G	H	I	J	K	L	M
2911	CVE-2017-9041	MEDIUM	Medium	GNU Binutils 2.28 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted ELF file, related to MIPS GOT mishandling in the process_mips_specific function in readelf.c.	binutils	Unchanged	8.0.0.23	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4283
2912	CVE-2017-9040	MEDIUM	Medium	GNU Binutils 2017-04-03 allows remote attackers to cause a denial of service (NULL pointer dereference and application crash), related to the process_mips_specific function in readelf.c, via a crafted ELF file that triggers a large memory-allocation attempt.	binutils	Unchanged	8.0.0.23	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4308
2913	CVE-2017-9039	MEDIUM	Medium	GNU Binutils 2.28 allows remote attackers to cause a denial of service (memory consumption) via a crafted ELF file with many program headers, related to the get_program_headers function in readelf.c.	binutils	Unchanged	8.0.0.23	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4306
2914	CVE-2017-9038	MEDIUM	Medium	GNU Binutils 2.28 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted ELF file, related to the byte_get_little_endian function in elfcomm.c, the get_unwind_section_word function in readelf.c, and ARM unwind information that contains invalid word offsets.	binutils	Unchanged	8.0.0.23	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4313
2915	CVE-2017-9023	MEDIUM	High	The ASN.1 parser in strongSwan before 5.5.3 improperly handles CHOICE types when the x509 plugin is enabled, which allows remote attackers to cause a denial of service (infinite loop) via a crafted certificate.	strongswan	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4341
2916	CVE-2017-9022	MEDIUM	High	The gmp plugin in strongSwan before 5.5.3 does not properly validate RSA public keys before calling mpz_powm_sec, which allows remote peers to cause a denial of service (floating point exception and process crash) via a crafted certificate.	strongswan	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4340
2917	CVE-2017-8925	LOW	Medium	The omninet_open function in drivers/usb/serial/omninet.c in the Linux kernel before 4.10.4 allows local users to cause a denial of service (tty exhaustion) by leveraging reference count mishandling.	linux	Unchanged	8.0.0.19	9.0.0.8	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4191
2918	CVE-2017-8924	LOW	Medium	The edge_bulk_in_callback function in drivers/usb/serial/io_ti.c in the Linux kernel before 4.10.4 allows local users to obtain sensitive information (in the dmesg ringbuffer and syslog) from uninitialized kernel memory by using a crafted USB device (posing as an io_ti USB serial device) to trigger an integer underflow.	linux	Unchanged	8.0.0.19	9.0.0.8	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4240
2919	CVE-2017-8923	HIGH	Critical	The zend_string_extend function in Zend/zend_string.h in PHP through 7.1.5 does not prevent changes to string objects that result in a negative length, which allows remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact by leveraging a script's use of .= with a long string.	php	Unchanged	Investigate	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4238
2920	CVE-2017-8890	HIGH	Critical	The inet_csk_clone_lock function in net/ipv4/inet_connection_sock.c in the Linux kernel through 4.10.15 allows attackers to cause a denial of service (double free) or possibly have unspecified other impact by leveraging use of the accept system call.	linux	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4218
2921	CVE-2017-8872	MEDIUM	Critical	The htmlParseTryOrFinish function in HTMLparser.c in libxml2 2.9.4 allows attackers to cause a denial of service (buffer over-read) or information disclosure.	libxml2	Unchanged	8.0.0.28	9.0.0.18	10.0.0.0	10.18.44.1	10.19.45.1	Not vulnerable	LIN9-4183
2922	CVE-2017-8871	HIGH	Medium	The cr_parser_parse_selector_core function in cr-parser.c in libcroco 0.6.12 allows remote attackers to cause a denial of service (infinite loop and CPU consumption) via a crafted CSS file.	libcroco	Unchanged	Vulnerable	Vulnerable	Investigate	Investigate	Investigate	Not vulnerable	LIN9-4391
2923	CVE-2017-8855	MEDIUM	High	wolfSSL before 3.11.0 does not prevent wc_DhAgree from accepting a malformed DH key.	wolfssl	Unchanged	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4215
2924	CVE-2017-8854	MEDIUM	High	wolfSSL before 3.10.2 has an out-of-bounds memory access with loading crafted DH parameters, aka a buffer overflow triggered by a malformed temporary DH file.	wolfssl	Unchanged	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4212
2925	CVE-2017-8834	MEDIUM	Medium	The cr_tknzr_parse_comment function in cr-tknzr.c in libcroco 0.6.12 allows remote attackers to cause a denial of service (memory allocation error) via a crafted CSS file.	libcroco	Unchanged	Vulnerable	Vulnerable	Investigate	Investigate	Investigate	Not vulnerable	LIN9-4397
2926	CVE-2017-8831	HIGH	High	The saa7164_bus_get function in drivers/media/pci/saa7164/saa7164-bus.c in the Linux kernel through 4.10.14 allows local users to cause a denial of service (out-of-bounds array access) or possibly have unspecified other impact by changing a certain sequence-number value, aka a double fetch vulnerability.	linux	Unchanged	8.0.0.28	9.0.0.18	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4217
2927	CVE-2017-8830	MEDIUM	Medium	In ImageMagick 7.0.5-6, the ReadBMPImage function in bmp.c:1379 allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4194
2928	CVE-2017-8824	HIGH	High	The dccp_disconnect function in net/dccp/proto.c in the Linux kernel through 4.14.3 allows local users to gain privileges or cause a denial of service (use-after-free) via an AF_UNSPEC connect system call during the DCCP_LISTEN state.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2761
2929	CVE-2017-8818	HIGH	Critical	curl and libcurl before 7.57.0 on 32-bit platforms allow attackers to cause a denial of service (out-of-bounds access and application crash) or possibly have unspecified other impact because too little memory is allocated for interfacing to an SSL library.	curl	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2616
2930	CVE-2017-8817	HIGH	Critical	The FTP wildcard function in curl and libcurl before 7.57.0 allows remote attackers to cause a denial of service (out-of-bounds read and application crash) or possibly have unspecified other impact via a string that ends with an '[' character.	curl	Unchanged	8.0.0.24	9.0.0.13	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2612
2931	CVE-2017-8816	HIGH	Critical	The NTLM authentication feature in curl and libcurl before 7.57.0 on 32-bit platforms allows attackers to cause a denial of service (integer overflow and resultant buffer overflow, and application crash) or possibly have unspecified other impact via vectors involving long user and password fields.	curl	Unchanged	8.0.0.24	9.0.0.13	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2634

	A	B	C	D	E	F	G	H	I	J	K	L	M
2932	CVE-2017-8804	HIGH	High	The xdr_bytes and xdr_string functions in the GNU C Library (aka glibc or libc6) 2.25 mishandle failures of buffer deserialization, which allows remote attackers to cause a denial of service (virtual memory allocation, or memory consumption if an overcommit setting is not used) via a crafted UDP packet to port 111, a related issue to CVE-2017-8779.	glibc	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4226
2933	CVE-2017-8797	HIGH	High	The NFSv4 server in the Linux kernel before 4.11.3 does not properly validate the layout type when processing the NFSv4 pNFS GETDEVICEINFO or LAYOUTGET operand in a UDP packet from a remote attacker. This type value is uninitialized upon encountering certain error conditions. This value is used as an array index for dereferencing, which leads to an OOPS and eventually a DoS of knfsd and a soft-lockup of the whole system.	linux	Unchanged	8.0.0.20	9.0.0.9	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4660
2934	CVE-2017-8786	HIGH	Critical	pcre2test.c in PCRE2 10.23 allows remote attackers to cause a denial of service (heap-based buffer overflow) or possibly have unspecified other impact via a crafted regular expression.	pcre	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4233
2935	CVE-2017-8779	HIGH	High	rpcbind through 0.2.4, LIBTIRPC through 1.0.1 and 1.0.2-rc through 1.0.2-rc3, and NTIRPC through 1.4.3 do not consider the maximum RPC data size during memory allocation for XDR strings, which allows remote attackers to cause a denial of service (memory consumption with no subsequent free) via a crafted UDP packet to port 111, aka rpcbomb.	rpcbind	Unchanged	8.0.0.21	9.0.0.9	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4207
2936	CVE-2017-8765	HIGH	Medium	The function named ReadICONImage in coders\icon.c in ImageMagick 7.0.5-5 has a memory leak vulnerability which can cause memory exhaustion via a crafted ICON file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4213
2937	CVE-2017-8421	HIGH	Medium	The function coff_set_alignment_hook in coffcode.h in Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, has a memory leak vulnerability which can cause memory exhaustion in objdump via a crafted PE file. Additional validation in dump_relocs_in_section in objdump.c can resolve this.	binutils	Unchanged	8.0.0.23	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4192
2938	CVE-2017-8419	MEDIUM	High	LAME through 3.99.5 relies on the signed integer data type for values in a WAV or AIFF header, which allows remote attackers to cause a denial of service (stack-based buffer overflow or heap-based buffer overflow) or possibly have unspecified other impact via a crafted file, as demonstrated by mishandling of num_channels.	lame	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4221
2939	CVE-2017-8399	HIGH	Critical	PCRE2 before 2017-03-10 has an out-of-bounds write caused by a stack-based buffer overflow in pcre2_match.c, related to a pattern with very many captures.	pcre	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4182
2940	CVE-2017-8398	MEDIUM	High	dwarf.c in GNU Binutils 2.28 is vulnerable to an invalid read of size 1 during dumping of debug information from a corrupt binary. This vulnerability causes programs that conduct an analysis of binary programs, such as objdump and readelf, to crash.	binutils	Unchanged	8.0.0.23	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4222
2941	CVE-2017-8397	MEDIUM	High	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, is vulnerable to an invalid read of size 1 and an invalid write of size 1 during processing of a corrupt binary containing reloc(s) with negative addresses. This vulnerability causes programs that conduct an analysis of binary programs using the libbfd library, such as objdump, to crash.	binutils	Unchanged	8.0.0.23	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4187
2942	CVE-2017-8396	MEDIUM	High	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, is vulnerable to an invalid read of size 1 because the existing reloc offset range tests didn't catch small negative offsets less than the size of the reloc field. This vulnerability causes programs that conduct an analysis of binary programs using the libbfd library, such as objdump, to crash.	binutils	Unchanged	8.0.0.23	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4205
2943	CVE-2017-8395	MEDIUM	High	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, is vulnerable to an invalid write of size 8 because of missing a malloc() return-value check to see if memory had actually been allocated in the _bfd_generic_get_section_contents function. This vulnerability causes programs that conduct an analysis of binary programs using the libbfd library, such as objcopy, to crash.	binutils	Unchanged	8.0.0.23	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4229
2944	CVE-2017-8394	MEDIUM	High	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, is vulnerable to an invalid read of size 4 due to NULL pointer dereferencing of _bfd_elf_large_com_section. This vulnerability causes programs that conduct an analysis of binary programs using the libbfd library, such as objcopy, to crash.	binutils	Unchanged	8.0.0.23	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4184
2945	CVE-2017-8393	MEDIUM	High	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, is vulnerable to a global buffer over-read error because of an assumption made by code that runs for objcopy and strip, that SHT_REL/SHR_RELA sections are always named starting with a .rel/.rela prefix. This vulnerability causes programs that conduct an analysis of binary programs using the libbfd library, such as objcopy and strip, to crash.	binutils	Unchanged	8.0.0.23	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4230
2946	CVE-2017-8392	MEDIUM	High	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, is vulnerable to an invalid read of size 8 because of missing a check to determine whether symbols are NULL in the _bfd_dwarf2_find_nearest_line function. This vulnerability causes programs that conduct an analysis of binary programs using the libbfd library, such as objdump, to crash.	binutils	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4186

2947	CVE-2017-8386	MEDIUM	High	git-shell in git before 2.4.12, 2.5.x before 2.5.6, 2.6.x before 2.6.7, 2.7.x before 2.7.5, 2.8.x before 2.8.5, 2.9.x before 2.9.4, 2.10.x before 2.10.3, 2.11.x before 2.11.2, and 2.12.x before 2.12.3 might allow remote authenticated users to gain privileges via a repository name that starts with a - (dash) character.	git	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4401
2948	CVE-2017-8380	High	Critical	Buffer overflow in the megasas_mmio_write function in Qemu 2.9.0 allows remote attackers to have unspecified impact via unknown vectors.	qemu	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5288
2949	CVE-2017-8379	MEDIUM	Medium	Memory leak in the keyboard input event handlers support in QEMU (aka Quick Emulator) allows local guest OS privileged users to cause a denial of service (host memory consumption) by rapidly generating large keyboard events.	qemu	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4309
2950	CVE-2017-8365	MEDIUM	Medium	The i2les_array function in pcm.c in libsndfile 1.0.28 allows remote attackers to cause a denial of service (buffer over-read and application crash) via a crafted audio file.	libsndfile	Unchanged	8.0.0.19	9.0.0.8	10.0.0.0	10.18.44.1	10.19.45.1	Not vulnerable	LIN9-4188
2951	CVE-2017-8363	MEDIUM	Medium	The flac_buffer_copy function in flac.c in libsndfile 1.0.28 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted audio file.	libsndfile	Unchanged	8.0.0.19	9.0.0.8	10.0.0.0	10.18.44.1	10.19.45.1	Not vulnerable	LIN9-4236
2952	CVE-2017-8362	MEDIUM	Medium	The flac_buffer_copy function in flac.c in libsndfile 1.0.28 allows remote attackers to cause a denial of service (invalid read and application crash) via a crafted audio file.	libsndfile	Unchanged	8.0.0.19	9.0.0.8	10.0.0.0	10.18.44.1	10.19.45.1	Not vulnerable	LIN9-4197
2953	CVE-2017-8361	MEDIUM	Medium	The flac_buffer_copy function in flac.c in libsndfile 1.0.28 allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted audio file.	libsndfile	Unchanged	8.0.0.19	9.0.0.8	10.0.0.0	10.18.44.1	10.19.45.1	Not vulnerable	LIN9-4190
2954	CVE-2017-8357	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadEPTImage function in ept.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4200
2955	CVE-2017-8356	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadSUNImage function in sun.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4224
2956	CVE-2017-8355	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadMTVImage function in mtv.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4219
2957	CVE-2017-8354	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadBMPImage function in bmp.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4196
2958	CVE-2017-8353	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadPICTImage function in pict.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4209
2959	CVE-2017-8352	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadXWDImage function in xwd.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4231
2960	CVE-2017-8351	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadPCDImage function in pcd.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4216
2961	CVE-2017-8350	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadJNGImage function in png.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4198
2962	CVE-2017-8349	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadSFWImage function in sfw.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4227
2963	CVE-2017-8348	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadMATImage function in mat.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4210
2964	CVE-2017-8347	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadEXRImage function in exr.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4211
2965	CVE-2017-8346	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadDCMImage function in dcm.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4181
2966	CVE-2017-8345	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadMNGImage function in png.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.28	9.0.0.19	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4189
2967	CVE-2017-8344	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadPCXImage function in pcx.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4206
2968	CVE-2017-8343	MEDIUM	Medium	In ImageMagick 7.0.5-5, the ReadAAIImage function in aai.c allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4237
2969	CVE-2017-8309	HIGH	High	Memory leak in the audio/audio.c in QEMU (aka Quick Emulator) allows remote attackers to cause a denial of service (memory consumption) by repeatedly starting and stopping audio capture.	qemu	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4299
2970	CVE-2017-8287	HIGH	Critical	FreeType 2 before 2017-03-26 has an out-of-bounds write caused by a heap-based buffer overflow related to the t1_builder_close_contour function in psaux/psobjs.c.	freetype	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4193
2971	CVE-2017-8284	MEDIUM	HIGH	** DISPUTED ** The disas_insn function in target/i386/translate.c in QEMU before 2.9.0, when TCG mode without hardware acceleration is used, does not limit the instruction size, which allows local users to gain privileges by creating a modified basic block that injects code into a setuid program, as demonstrated by procmail. NOTE: the vendor has stated this bug does not violate any security guarantees QEMU makes.	qemu	Unchanged	8.0.0.32	9.0.0.25	Not vulnerable	Not vulnerable	Not vulnerable	Investigate	LIN1019-3675
2972	CVE-2017-8283	HIGH	Critical	dpkg-source in dpkg 1.3.0 through 1.18.23 is able to use a non-GNU patch program and does not offer a protection mechanism for blank-indented diff hunks, which allows remote attackers to conduct directory traversal attacks via a crafted Debian source package, as demonstrated by use of dpkg-source on NetBSD.	dpkg	Unchanged	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4228

	A	B	C	D	E	F	G	H	I	J	K	L	M
2973	CVE-2017-8112	MEDIUM	Medium	hw/scsi/vmw_pvscsi.c in QEMU (aka Quick Emulator) allows local guest OS privileged users to cause a denial of service (infinite loop and CPU consumption) via the message ring page count.	qemu	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4185
2974	CVE-2017-8106	MEDIUM	Medium	The handle_invept function in arch/x86/kvm/vmx.c in the Linux kernel 3.12 through 3.15 allows privileged KVM guest OS users to cause a denial of service (NULL pointer dereference and host OS crash) via a single-context INVEPT instruction with a NULL EPT pointer.	linux	Unchanged	8.0.0.18	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4130
2975	CVE-2017-8105	HIGH	Critical	FreeType 2 before 2017-03-24 has an out-of-bounds write caused by a heap-based buffer overflow related to the t1_decoder_parse_charstrings function in psaux/t1decode.c.	freetype	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4069
2976	CVE-2017-8086	MEDIUM	Medium	Memory leak in the v9fs_list_xattr function in hw/9pfs/9p-xattr.c in QEMU (aka Quick Emulator) allows local guest OS privileged users to cause a denial of service (memory consumption) via vectors involving the orig_value variable.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4201
2977	CVE-2017-8072	HIGH	High	The cp2112_gpio_direction_input function in drivers/hid/hid-cp2112.c in the Linux kernel 4.9.x before 4.9.9 does not have the expected EIO error status for a zero-length report, which allows local users to have an unspecified impact via unknown vectors.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4092
2978	CVE-2017-8071	LOW	Medium	drivers/hid/hid-cp2112.c in the Linux kernel 4.9.x before 4.9.9 uses a spinlock without considering that sleeping is possible in a USB HID request callback, which allows local users to cause a denial of service (deadlock) via unspecified vectors.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4038
2979	CVE-2017-8070	HIGH	High	drivers/net/usb/catc.c in the Linux kernel 4.9.x before 4.9.11 interacts incorrectly with the CONFIG_VMAP_STACK option, which allows local users to cause a denial of service (system crash or memory corruption) or possibly have unspecified other impact by leveraging use of more than one virtual page for a DMA scatterlist.	linux	Unchanged	8.0.0.18	9.0.0.7	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4044
2980	CVE-2017-8069	HIGH	High	drivers/net/usb/rtl8150.c in the Linux kernel 4.9.x before 4.9.11 interacts incorrectly with the CONFIG_VMAP_STACK option, which allows local users to cause a denial of service (system crash or memory corruption) or possibly have unspecified other impact by leveraging use of more than one virtual page for a DMA scatterlist.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4047
2981	CVE-2017-8068	HIGH	High	drivers/net/usb/pegasus.c in the Linux kernel 4.9.x before 4.9.11 interacts incorrectly with the CONFIG_VMAP_STACK option, which allows local users to cause a denial of service (system crash or memory corruption) or possibly have unspecified other impact by leveraging use of more than one virtual page for a DMA scatterlist.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4068
2982	CVE-2017-8067	HIGH	High	drivers/char/virtio_console.c in the Linux kernel 4.9.x and 4.10.x before 4.10.12 interacts incorrectly with the CONFIG_VMAP_STACK option, which allows local users to cause a denial of service (system crash or memory corruption) or possibly have unspecified other impact by leveraging use of more than one virtual page for a DMA scatterlist.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4037
2983	CVE-2017-8066	HIGH	High	drivers/net/can/usb/gs_usb.c in the Linux kernel 4.9.x and 4.10.x before 4.10.2 interacts incorrectly with the CONFIG_VMAP_STACK option, which allows local users to cause a denial of service (system crash or memory corruption) or possibly have unspecified other impact by leveraging use of more than one virtual page for a DMA scatterlist.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4122
2984	CVE-2017-8065	HIGH	High	crypto/ccm.c in the Linux kernel 4.9.x and 4.10.x through 4.10.12 interacts incorrectly with the CONFIG_VMAP_STACK option, which allows local users to cause a denial of service (system crash or memory corruption) or possibly have unspecified other impact by leveraging use of more than one virtual page for a DMA scatterlist.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4012
2985	CVE-2017-8064	HIGH	High	drivers/media/usb/dvb-usb-v2/dvb_usb_core.c in the Linux kernel 4.9.x and 4.10.x before 4.10.12 interacts incorrectly with the CONFIG_VMAP_STACK option, which allows local users to cause a denial of service (system crash or memory corruption) or possibly have unspecified other impact by leveraging use of more than one virtual page for a DMA scatterlist.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4042
2986	CVE-2017-8063	HIGH	High	drivers/media/usb/dvb-usb/cxusb.c in the Linux kernel 4.9.x and 4.10.x before 4.10.12 interacts incorrectly with the CONFIG_VMAP_STACK option, which allows local users to cause a denial of service (system crash) or possibly have unspecified other impact by leveraging use of more than one virtual page for a DMA scatterlist.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4107
2987	CVE-2017-8062	HIGH	High	drivers/media/usb/dvb-usb/dw2102.c in the Linux kernel 4.9.x and 4.10.x before 4.10.4 interacts incorrectly with the CONFIG_VMAP_STACK option, which allows local users to cause a denial of service (system crash or memory corruption) or possibly have unspecified other impact by leveraging use of more than one virtual page for a DMA scatterlist.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4049
2988	CVE-2017-8061	HIGH	High	drivers/media/usb/dvb-usb/dvb-usb-firmware.c in the Linux kernel 4.9.x and 4.10.x before 4.10.7 interacts incorrectly with the CONFIG_VMAP_STACK option, which allows local users to cause a denial of service (system crash or memory corruption) or possibly have unspecified other impact by leveraging use of more than one virtual page for a DMA scatterlist.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4067

	A	B	C	D	E	F	G	H	I	J	K	L	M
2989	CVE-2017-7982	MEDIUM	Medium	Integer overflow in the plist_from_bin function in bplist.c in libimobiledevice/libplist before 2017-04-19 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted plist file.	libplist	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4099
2990	CVE-2017-7980	MEDIUM	High	Heap-based buffer overflow in Cirrus CLGD 54xx VGA Emulator in Quick Emulator (Qemu) 2.8 and earlier allows local guest OS users to execute arbitrary code or cause a denial of service (crash) via vectors related to a VNC client updating its display after a VGA operation.	qemu	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4836
2991	CVE-2017-7979	HIGH	High	The cookie feature in the packet action API implementation in net/sched/act_api.c in the Linux kernel 4.11.x through 4.11-rc7 mishandles the tb nlattr array, which allows local users to cause a denial of service (uninitialized memory access and refcount underflow, and system hang or crash) or possibly have unspecified other impact via tc filter add commands in certain contexts. NOTE: this does not affect stable kernels, such as 4.10.x, from kernel.org.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4026
2992	CVE-2017-7975	MEDIUM	High	Artifex jbig2dec 0.13, as used in Ghostscript, allows out-of-bounds writes because of an integer overflow in the jbig2_build_huffman_table function in jbig2_huffman.c during operations on a crafted JBIG2 file, leading to a denial of service (application crash) or possibly execution of arbitrary code.	ghostscript	Unchanged	8.0.0.18	9.0.0.7	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4024
2993	CVE-2017-7961	MEDIUM	HIGH	** DISPUTED ** The cr_tknzr_parse_rgb function in cr-tknzr.c in libcroco 0.6.11 and 0.6.12 has an outside the range of representable values of type long undefined behavior issue, which might allow remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted CSS file. NOTE: third-party analysis reports This is not a security issue in my view. The conversion surely is truncating the double into a long value, but there is no impact as the value is one of the RGB components.	libcroco	Unchanged	8.0.0.32	9.0.0.25	10.17.41.19	10.18.44.14	Not vulnerable	Investigate	LIN1019-3677
2994	CVE-2017-7960	MEDIUM	Medium	The cr_input_new_from_uri function in cr-input.c in libcroco 0.6.11 and 0.6.12 allows remote attackers to cause a denial of service (heap-based buffer over-read) via a crafted CSS file.	libcroco	Unchanged	8.0.0.18	9.0.0.7	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-4145
2995	CVE-2017-7948	MEDIUM	High	Integer overflow in the mark_curve function in Artifex Ghostscript 9.21 allows remote attackers to cause a denial of service (out-of-bounds write and application crash) or possibly have unspecified other impact via a crafted PostScript document.	ghostscript	Unchanged	Not vulnerable	Not vulnerable	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4133
2996	CVE-2017-7943	MEDIUM	Medium	The ReadSVGImage function in svg.c in ImageMagick 7.0.5-4 allows remote attackers to consume an amount of available memory via a crafted file.	imagemagick	Unchanged	Vulnerable	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4117
2997	CVE-2017-7942	MEDIUM	Medium	The ReadAVSImage function in avs.c in ImageMagick 7.0.5-4 allows remote attackers to consume an amount of available memory via a crafted file.	imagemagick	Unchanged	8.0.0.28	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4078
2998	CVE-2017-7941	MEDIUM	Medium	The ReadSGIImage function in sgi.c in ImageMagick 7.0.5-4 allows remote attackers to consume an amount of available memory via a crafted file.	imagemagick	Unchanged	8.0.0.28	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4131
2999	CVE-2017-7895	HIGH	Critical	The NFSv2 and NFSv3 server implementations in the Linux kernel through 4.10.13 lack certain checks for the end of a buffer, which allows remote attackers to trigger pointer-arithmetic errors or possibly have unspecified other impact via crafted requests, related to fs/nfsd/nfs3xdr.c and fs/nfsd/nfsxdr.c.	linux	Unchanged	8.0.0.18	9.0.0.7	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4204
3000	CVE-2017-7890	MEDIUM	Medium	The GIF decoding function gdImageCreateFromGifCtx in gd_gif_in.c in the GD Graphics Library (aka libgd), as used in PHP before 5.6.31 and 7.x before 7.1.7, does not zero colorMap arrays before use. A specially crafted GIF image could use the uninitialized tables to read −700 bytes from the top of the stack, potentially disclosing sensitive information.	php	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5048
3001	CVE-2017-7889	HIGH	High	The mm subsystem in the Linux kernel through 4.10.10 does not properly enforce the CONFIG_STRICT_DEVMEM protection mechanism, which allows local users to read or write to kernel memory locations in the first megabyte (and bypass slab-allocation access restrictions) via an application that opens the /dev/mem file, related to arch/x86/mm/init.c and drivers/char/mem.c.	linux	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4076
3002	CVE-2017-7869	MEDIUM	High	GnuTLS before 2017-02-20 has an out-of-bounds write caused by an integer overflow and heap-based buffer overflow related to the cdk_pkt_read function in opencdk/read-packet.c. This issue (which is a subset of the vendor's GNUTLS-SA-2017-3 report) is fixed in 3.5.10.	gnutls	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4034
3003	CVE-2017-7868	MEDIUM	High	International Components for Unicode (ICU) for C/C++ before 2017-02-13 has an out-of-bounds write caused by a heap-based buffer overflow related to the utf8TextAccess function in common/utext.cpp and the utext_moveIndex32* function.	icu	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4061
3004	CVE-2017-7867	MEDIUM	High	International Components for Unicode (ICU) for C/C++ before 2017-02-13 has an out-of-bounds write caused by a heap-based buffer overflow related to the utf8TextAccess function in common/utext.cpp and the utext_setNativeIndex* function.	icu	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4119
3005	CVE-2017-7866	HIGH	Critical	FFmpeg before 2017-01-23 has an out-of-bounds write caused by a stack-based buffer overflow related to the decode_zbuf function in libavcodec/pngdec.c.	ffmpeg	Unchanged	Won't Fix	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4079
3006	CVE-2017-7865	HIGH	Critical	FFmpeg before 2017-01-24 has an out-of-bounds write caused by a heap-based buffer overflow related to the ipvideo_decode_block_opcode_0xA function in libavcodec/interplayvideo.c and the avcodec_align_dimensions2 function in libavcodec/utils.c.	ffmpeg	Unchanged	Won't Fix	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4141
3007	CVE-2017-7864	HIGH	Critical	FreeType 2 before 2017-02-02 has an out-of-bounds write caused by a heap-based buffer overflow related to the tt_size_reset function in truetype/ttobjs.c.	freetype	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4096

	A	B	C	D	E	F	G	H	I	J	K	L	M
3008	CVE-2017-7863	HIGH	Critical	FFmpeg before 2017-02-04 has an out-of-bounds write caused by a heap-based buffer overflow related to the decode_frame_common function in libavcodec/pngdec.c.	ffmpeg	Unchanged	Won't Fix	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4127
3009	CVE-2017-7862	HIGH	Critical	FFmpeg before 2017-02-07 has an out-of-bounds write caused by a heap-based buffer overflow related to the decode_frame function in libavcodec/pictordec.c.	ffmpeg	Unchanged	Won't Fix	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4020
3010	CVE-2017-7859	HIGH	Critical	FFmpeg before 2017-03-05 has an out-of-bounds write caused by a heap-based buffer overflow related to the ff_h264_slice_context_init function in libavcodec/h264dec.c.	ffmpeg	Unchanged	Won't Fix	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4118
3011	CVE-2017-7858	HIGH	Critical	FreeType 2 before 2017-03-07 has an out-of-bounds write related to the TT_Get_MM_Var function in truetype/ttgxvar.c and the sfnt_init_face function in sfnt/sfobjs.c.	freetype	Unchanged	Not vulnerable	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4109
3012	CVE-2017-7857	HIGH	Critical	FreeType 2 before 2017-03-08 has an out-of-bounds write caused by a heap-based buffer overflow related to the TT_Get_MM_Var function in truetype/ttgxvar.c and the sfnt_init_face function in sfnt/sfobjs.c.	freetype	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4115
3013	CVE-2017-7748	HIGH	High	In Wireshark 2.2.0 to 2.2.5 and 2.0.0 to 2.0.11, the WSP dissector could go into an infinite loop, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-wsp.c by adding a length check.	wireshark	Unchanged	8.0.0.18	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4139
3014	CVE-2017-7747	MEDIUM	High	In Wireshark 2.2.0 to 2.2.5 and 2.0.0 to 2.0.11, the PacketBB dissector could crash, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-packetbb.c by restricting additions to the protocol tree.	wireshark	Unchanged	8.0.0.18	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4015
3015	CVE-2017-7746	HIGH	High	In Wireshark 2.2.0 to 2.2.5 and 2.0.0 to 2.0.11, the SLSK dissector could go into an infinite loop, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-slsk.c by adding checks for the remaining length.	wireshark	Unchanged	8.0.0.18	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4055
3016	CVE-2017-7745	HIGH	High	In Wireshark 2.2.0 to 2.2.5 and 2.0.0 to 2.0.11, the SIGCOMP dissector could go into an infinite loop, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-sigcomp.c by correcting a memory-size check.	wireshark	Unchanged	8.0.0.18	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4063
3017	CVE-2017-7742	MEDIUM	Medium	In libsndfile before 1.0.28, an error in the flac_buffer_copy() function (flac.c) can be exploited to cause a segmentation violation (with read memory access) via a specially crafted FLAC file during a resample attempt, a similar issue to CVE-2017-7585.	libsndfile	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4128
3018	CVE-2017-7741	MEDIUM	Medium	In libsndfile before 1.0.28, an error in the flac_buffer_copy() function (flac.c) can be exploited to cause a segmentation violation (with write memory access) via a specially crafted FLAC file during a resample attempt, a similar issue to CVE-2017-7585.	libsndfile	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4066
3019	CVE-2017-7718	LOW	Medium	hw/display/cirrus_vga_rop.h in QEMU (aka Quick Emulator) allow local guest OS privileged users to cause a denial of service (out-of-bounds read and QEMU process crash) via vectors related to copying VGA data via the cirrus_bitblt_rop_fwd_transp_ and cirrus_bitblt_rop_fwd_ functions.	qemu	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4033
3020	CVE-2017-7705	HIGH	High	In Wireshark 2.2.0 to 2.2.5 and 2.0.0 to 2.0.11, the RPC over RDMA dissector could go into an infinite loop, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-rpcrdma.c by correctly checking for going beyond the maximum offset.	wireshark	Unchanged	Not vulnerable	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4046
3021	CVE-2017-7704	HIGH	High	In Wireshark 2.2.0 to 2.2.5, the DOF dissector could go into an infinite loop, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-dof.c by using a different integer data type and adjusting a return value.	wireshark	Unchanged	Not vulnerable	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4048
3022	CVE-2017-7703	MEDIUM	High	In Wireshark 2.2.0 to 2.2.5 and 2.0.0 to 2.0.11, the IMAP dissector could crash, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-imap.c by calculating a line's end correctly.	wireshark	Unchanged	8.0.0.18	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4105
3023	CVE-2017-7702	HIGH	High	In Wireshark 2.2.0 to 2.2.5 and 2.0.0 to 2.0.11, the WBXML dissector could go into an infinite loop, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-wbxml.c by adding length validation.	wireshark	Unchanged	8.0.0.28	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4100
3024	CVE-2017-7701	HIGH	High	In Wireshark 2.2.0 to 2.2.5 and 2.0.0 to 2.0.11, the BGP dissector could go into an infinite loop, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-bgp.c by using a different integer data type.	wireshark	Unchanged	8.0.0.18	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4124
3025	CVE-2017-7700	HIGH	Medium	In Wireshark 2.2.0 to 2.2.5 and 2.0.0 to 2.0.11, the NetScaler file parser could go into an infinite loop, triggered by a malformed capture file. This was addressed in wiretap/netscaler.c by ensuring a nonzero record size.	wireshark	Unchanged	8.0.0.18	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4050
3026	CVE-2017-7679	HIGH	Critical	In Apache httpd 2.2.x before 2.2.33 and 2.4.x before 2.4.26, mod_mime can read one byte past the end of a buffer when sending a malicious Content-Type response header.	apache2	Unchanged	8.0.0.20	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4557
3027	CVE-2017-7668	HIGH	Critical	The HTTP strict parsing changes added in Apache httpd 2.2.32 and 2.4.24 introduced a bug in token list parsing, which allows ap_find_token() to search past the end of its input string. By maliciously crafting a sequence of request headers, an attacker may be able to cause a segmentation fault, or to force ap_find_token() to return an incorrect value.	apache2	Unchanged	8.0.0.20	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4486
3028	CVE-2017-7659	MEDIUM	High	A maliciously constructed HTTP/2 request could cause mod_http2 2.4.24, 2.4.25 to dereference a NULL pointer and crash the server process.	apache2	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4823
3029	CVE-2017-7655	Medium	HIGH	In Eclipse Mosquitto version from 1.0 to 1.4.15, a Null Dereference vulnerability was found in the Mosquitto library which could lead to crashes for those applications using the library.	mosquitto	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-3813

	A	B	C	D	E	F	G	H	I	J	K	L	M
3030	CVE-2017-7654	MEDIUM	HIGH	In Eclipse Mosquitto 1.4.15 and earlier, a Memory Leak vulnerability was found within the Mosquitto Broker. Unauthenticated clients can send crafted CONNECT packets which could cause a denial of service in the Mosquitto Broker.	mosquitto	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4125
3031	CVE-2017-7653	LOW	MEDIUM	The Eclipse Mosquitto broker up to version 1.4.15 does not reject strings that are not valid UTF-8. A malicious client could cause other clients that do reject invalid UTF-8 strings to disconnect themselves from the broker by sending a topic string which is not valid UTF-8, and so cause a denial of service for the clients.	mosquitto	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4110
3032	CVE-2017-7645	HIGH	High	The NFSv2/NFSv3 server in the nfsd subsystem in the Linux kernel through 4.10.11 allows remote attackers to cause a denial of service (system crash) via a long RPC reply, related to net/sunrpc/svc.c, fs/nfsd/nfs3xdr.c, and fs/nfsd/nfsxdr.c.	linux	Unchanged	8.0.0.19	9.0.0.8	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4123
3033	CVE-2017-7619	MEDIUM	High	In ImageMagick 7.0.4-9, an infinite loop can occur because of a floating-point rounding error in some of the color algorithms. This affects ModulateHSL, ModulateHCL, ModulateHCLp, ModulateHSB, ModulateHSI, ModulateHSV, ModulateHWB, ModulateLCHab, and ModulateLCHuv.	imagemagick	Unchanged	8.0.0.28	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3960
3034	CVE-2017-7618	HIGH	High	crypto/ahash.c in the Linux kernel through 4.10.9 allows attackers to cause a denial of service (API operation calling its own callback, and infinite recursion) by triggering EBUSY on a full queue.	linux	Unchanged	8.0.0.17	9.0.0.6	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3971
3035	CVE-2017-7616	LOW	Medium	Incorrect error handling in the set_mempolicy and mbind compat syscalls in mm/mempolicy.c in the Linux kernel through 4.10.9 allows local users to obtain sensitive information from uninitialized stack data by triggering failure of a certain bitmap operation.	linux	Unchanged	8.0.0.17	9.0.0.6	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3957
3036	CVE-2017-7614	HIGH	Critical	elflink.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, has a member access within null pointer undefined behavior issue, which might allow remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via an int main() {return 0;} program.	binutils	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3945
3037	CVE-2017-7613	MEDIUM	Medium	elflint.c in elfutils 0.168 does not validate the number of sections and the number of segments, which allows remote attackers to cause a denial of service (memory consumption) via a crafted ELF file.	elfutils	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3965
3038	CVE-2017-7612	MEDIUM	Medium	The check_sysv_hash function in elflint.c in elfutils 0.168 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted ELF file.	elfutils	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3892
3039	CVE-2017-7611	MEDIUM	Medium	The check_symtab_shndx function in elflint.c in elfutils 0.168 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted ELF file.	elfutils	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3922
3040	CVE-2017-7610	MEDIUM	Medium	The check_group function in elflint.c in elfutils 0.168 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted ELF file.	elfutils	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3931
3041	CVE-2017-7609	MEDIUM	Medium	elf_compress.c in elfutils 0.168 does not validate the zlib compression factor, which allows remote attackers to cause a denial of service (memory consumption) via a crafted ELF file.	elfutils	Unchanged	Not vulnerable	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3954
3042	CVE-2017-7608	MEDIUM	Medium	The ebl_object_note_type_name function in eblobjnotetypename.c in elfutils 0.168 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted ELF file.	elfutils	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3926
3043	CVE-2017-7607	MEDIUM	Medium	The handle_gnu_hash function in readelf.c in elfutils 0.168 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted ELF file.	elfutils	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3939
3044	CVE-2017-7606	MEDIUM	Medium	coders/rle.c in ImageMagick 7.0.5-4 has an outside the range of representable values of type unsigned char undefined behavior issue, which might allow remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted image.	imagemagick	Unchanged	8.0.0.28	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3893
3045	CVE-2017-7602	MEDIUM	High	LibTIFF 4.0.7 has a signed integer overflow, which might allow remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted image.	tiff	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3880
3046	CVE-2017-7601	MEDIUM	High	LibTIFF 4.0.7 has a shift exponent too large for 64-bit type long undefined behavior issue, which might allow remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted image.	tiff	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3909
3047	CVE-2017-7600	MEDIUM	High	LibTIFF 4.0.7 has an outside the range of representable values of type unsigned char undefined behavior issue, which might allow remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted image.	tiff	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3891
3048	CVE-2017-7599	MEDIUM	High	LibTIFF 4.0.7 has an outside the range of representable values of type short undefined behavior issue, which might allow remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted image.	tiff	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3936
3049	CVE-2017-7598	MEDIUM	High	tif_dirread.c in LibTIFF 4.0.7 might allow remote attackers to cause a denial of service (divide-by-zero error and application crash) via a crafted image.	tiff	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3949
3050	CVE-2017-7597	MEDIUM	High	tif_dirread.c in LibTIFF 4.0.7 has an outside the range of representable values of type float undefined behavior issue, which might allow remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted image.	tiff	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3963

	A	B	C	D	E	F	G	H	I	J	K	L	M
3051	CVE-2017-7596	MEDIUM	High	LibTIFF 4.0.7 has an outside the range of representable values of type float undefined behavior issue, which might allow remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted image.	tiff	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3918
3052	CVE-2017-7595	MEDIUM	Medium	The JPEGSetupEncode function in tiff_jpeg.c in LibTIFF 4.0.7 allows remote attackers to cause a denial of service (divide-by-zero error and application crash) via a crafted image.	tiff	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3890
3053	CVE-2017-7594	MEDIUM	Medium	The OJPEGReadHeaderInfoSecTablesDcTable function in tif_ojpeg.c in LibTIFF 4.0.7 allows remote attackers to cause a denial of service (memory leak) via a crafted image.	tiff	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3914
3054	CVE-2017-7593	MEDIUM	Medium	tif_read.c in LibTIFF 4.0.7 does not ensure that tif_rawdata is properly initialized, which might allow remote attackers to obtain sensitive information from process memory via a crafted image.	tiff	Unchanged	8.0.0.18	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3972
3055	CVE-2017-7592	MEDIUM	High	The putagreytile function in tif_getimage.c in LibTIFF 4.0.7 has a left-shift undefined behavior issue, which might allow remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted image.	tiff	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3964
3056	CVE-2017-7586	MEDIUM	Medium	In libsndfile before 1.0.28, an error in the header_read() function (common.c) when handling ID3 tags can be exploited to cause a stack-based buffer overflow via a specially crafted FLAC file.	libsndfile	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3968
3057	CVE-2017-7585	MEDIUM	Medium	In libsndfile before 1.0.28, an error in the flac_buffer_copy() function (flac.c) can be exploited to cause a stack-based buffer overflow via a specially crafted FLAC file.	libsndfile	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3934
3058	CVE-2017-7562	MEDIUM	MEDIUM	A flaw was found in krb5 certificate EKU validation which could lead to improper authorization if a forged certificate with the right EKU and no SAN is used.	krb5	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4278
3059	CVE-2017-7558	MEDIUM	HIGH	A kernel data leak due to an out-of-bound read was found in Linux kernel in inet_diag_msg_sctp{,l}addr_fill() and sctp_get_sctp_info() functions present since v4.7-rc1 upto v4.13 including. A data leak happens when these functions fill in sockaddr data structures used to export socket's diagnostic information. As a result upto 100 bytes of the slab data could be leaked to a userspace.	linux	Unchanged	Not vulnerable	9.0.0.17	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4174
3060	CVE-2017-7548	MEDIUM	High	PostgreSQL versions before 9.4.13, 9.5.8 and 9.6.4 are vulnerable to authorization flaw allowing remote authenticated attackers with no privileges on a large object to overwrite the entire contents of the object, resulting in a denial of service.	postgresql	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5154
3061	CVE-2017-7547	MEDIUM	High	PostgreSQL versions before 9.2.22, 9.3.18, 9.4.13, 9.5.8 and 9.6.4 are vulnerable to authorization flaw allowing remote authenticated attackers to retrieve passwords from the user mappings defined by the foreign server owners without actually having the privileges to do so.	postgresql	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5133
3062	CVE-2017-7546	High	Critical	PostgreSQL versions before 9.2.22, 9.3.18, 9.4.13, 9.5.8 and 9.6.4 are vulnerable to incorrect authentication flaw allowing remote attackers to gain access to database accounts with an empty password.	postgresql	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5119
3063	CVE-2017-7544	MEDIUM	Critical	libexif through 0.6.21 is vulnerable to out-of-bounds heap read vulnerability in exif_data_save_data_entry function in libexif/exif-data.c caused by improper length computation of the allocated data of an ExifMnote entry which can cause denial-of-service or possibly information disclosure.	libexif	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5436
3064	CVE-2017-7542	MEDIUM	Medium	The ip6_find_1stfragopt function in net/ipv6/output_core.c in the Linux kernel through 4.12.3 allows local users to cause a denial of service (integer overflow and infinite loop) by leveraging the ability to open a raw socket.	linux	Unchanged	8.0.0.21	9.0.0.10	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4822
3065	CVE-2017-7541	HIGH	High	The brcmf_cfg80211_mgmt_tx function in drivers/net/wireless/broadcom/brcm80211/brcmfmac/cfg80211.c in the Linux kernel before 4.12.3 allows local users to cause a denial of service (buffer overflow and system crash) or possibly gain privileges via a crafted NL80211_CMD_FRAME Netlink packet.	linux	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4768
3066	CVE-2017-7539	MEDIUM	HIGH	Quick Emulator(Qemu) built with the Network Block Device(NBD) Server support is vulnerable to a crash via assertion failure. It could occur if a client sent undue data during initial connection negotiation.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4281
3067	CVE-2017-7533	Medium	High	Race condition in the fsnotify implementation in the Linux kernel through 4.12.4 allows local users to gain privileges or cause a denial of service (memory corruption) via a crafted application that leverages simultaneous execution of the inotify_handle_event and vfs_rename functions.	linux	Unchanged	8.0.0.21	9.0.0.10	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5065
3068	CVE-2017-7529	MEDIUM	High	Nginx versions since 0.5.6 up to and including 1.13.2 are vulnerable to integer overflow vulnerability in nginx range filter module resulting into leak of potentially sensitive information triggered by specially crafted request.	nginx	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4757
3069	CVE-2017-7526	MEDIUM	MEDIUM	Libgcrypt's RSA-1024 implementation using left-to-right method for computing the sliding-window expansion was found to be vulnerable to cache side-channel attack resulting into complete break of RSA-1024. The same attack is believed to work on RSA-2048 with moderately more computation. This side-channel requires that attacker can run arbitrary software on the hardware where the private RSA key is used.	libgcrypt	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4733
3070	CVE-2017-7522	MEDIUM	Medium	OpenVPN versions before 2.4.3 and before 2.3.17 are vulnerable to denial-of-service by authenticated remote attacker via sending a certificate with an embedded NULL character.	openvpn	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4504
3071	CVE-2017-7521	MEDIUM	Medium	OpenVPN versions before 2.4.3 and before 2.3.17 are vulnerable to remote denial-of-service due to memory exhaustion caused by memory leaks and double-free issue in extract_x509_extension().	openvpn	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4550

	A	B	C	D	E	F	G	H	I	J	K	L	M
3072	CVE-2017-7520	MEDIUM	High	OpenVPN versions before 2.4.3 and before 2.3.17 are vulnerable to denial-of-service and/or possibly sensitive memory leak triggered by man-in-the-middle attacker.	openvpn	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4549
3073	CVE-2017-7519	LOW	MEDIUM	In Ceph, a format string flaw was found in the way libradosstriper parses input from user. A user could crash an application or service using the libradosstriper library.	ceph	Unchanged	8.0.0.27	9.0.0.18	Won't Fix	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4392
3074	CVE-2017-7518	MEDIUM	HIGH	Linux kernel built with the Kernel-based Virtual Machine(CONFIG_KVM) support is vulnerable to an incorrect debug exception(#DB) error. It could occur while emulating a syscall instruction. A user/process inside guest could use this flaw to potentially escalate their privileges inside guest.	linux	Unchanged	8.0.0.27	9.0.0.18	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4172
3075	CVE-2017-7516			It was found that the cpio --no-absolute-filenames option since version 2.7 did not verify paths during extraction. A specially crafted cpio archive could bypass this option and write to an arbitrary location, outside of the extraction directory.	cpio	Updated	8.0.0.30	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3232
3076	CVE-2017-7515	MEDIUM	Medium	poppler through version 0.55.0 is vulnerable to an uncontrolled recursion in pdfunite resulting into potential denial-of-service.	poppler	Unchanged	Won't Fix	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4432
3077	CVE-2017-7511	MEDIUM	Medium	poppler since version 0.17.3 has been vulnerable to NULL pointer dereference in pdfunite triggered by specially crafted documents.	poppler	Unchanged	Won't Fix	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4427
3078	CVE-2017-7510	Medium	HIGH	In ovirt-engine 4.1, if a host was provisioned with cloud-init, the root password could be revealed through the REST interface.	ovirt-engine	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	New
3079	CVE-2017-7508	MEDIUM	High	OpenVPN versions before 2.4.3 and before 2.3.17 are vulnerable to remote denial-of-service when receiving malformed IPv6 packet.	openvpn	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4522
3080	CVE-2017-7507	MEDIUM	High	GnuTLS version 3.5.12 and earlier is vulnerable to a NULL pointer dereference while decoding a status response TLS extension with valid contents. This could lead to a crash of the GnuTLS server application.	gnutls	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4489
3081	CVE-2017-7506	MEDIUM	High	spice versions though 0.13 are vulnerable to out-of-bounds memory access when processing specially crafted messages from authenticated attacker to the spice server resulting into crash and/or server memory leak.	spice	Unchanged	8.0.0.30	9.0.0.21	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4799
3082	CVE-2017-7502	MEDIUM	High	Null pointer dereference vulnerability in NSS since 3.24.0 was found when server receives empty SSLv2 messages resulting into denial of service by remote attacker.	nss	Unchanged	Not vulnerable	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4389
3083	CVE-2017-7501	MEDIUM	High	It was found that versions of rpm before 4.13.0.2 use temporary files with predictable names when installing an RPM. An attacker with ability to write in a directory where files will be installed could create symbolic links to an arbitrary location and modify content, and possibly permissions to arbitrary files, which could be used for denial of service or possibly privilege escalation.	rpm	Unchanged	Vulnerable	Not vulnerable	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2619
3084	CVE-2017-7495	LOW	Medium	fs/ext4/inode.c in the Linux kernel before 4.6.2, when ext4 data=ordered mode is used, mishandles a needs-flushing-before-commit list, which allows local users to obtain sensitive information from other users' files in opportunistic circumstances by waiting for a hardware reset, creating a new file, making write system calls, and reading this file.	linux	Unchanged	8.0.0.20	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4276
3085	CVE-2017-7494	HIGH	Critical	Samba since version 3.5.0 is vulnerable to remote code execution vulnerability, allowing a malicious client to upload a shared library to a writable share, and then cause the server to load and execute it.	samba	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4416
3086	CVE-2017-7493	MEDIUM	High	Quick Emulator (Qemu) built with the VirtFS, host directory sharing via Plan 9 File System(9pfs) support, is vulnerable to an improper access control issue. It could occur while accessing virtfs metadata files in mapped-file security mode. A guest user could use this flaw to escalate their privileges inside guest.	qemu	Unchanged	8.0.0.27	9.0.0.17	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4214
3087	CVE-2017-7487	HIGH	High	The ipxitf_ioctl function in net/ipx/af_ipx.c in the Linux kernel through 4.11.1 mishandles reference counts, which allows local users to cause a denial of service (use-after-free) or possibly have unspecified other impact via a failed SIOCGIFADDR ioctl call for an IPX interface.	linux	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4284
3088	CVE-2017-7486	MEDIUM	High	PostgreSQL versions 8.4 - 9.6 are vulnerable to information leak in pg_user_mappings view which discloses foreign server passwords to any user having USAGE privilege on the associated foreign server.	postgresql	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4202
3089	CVE-2017-7485	MEDIUM	Medium	In PostgreSQL 9.3.x before 9.3.17, 9.4.x before 9.4.12, 9.5.x before 9.5.7, and 9.6.x before 9.6.3, it was found that the PGREQUIRESSL environment variable was no longer enforcing a SSL/TLS connection to a PostgreSQL server. An active Man-in-the-Middle attacker could use this flaw to strip the SSL/TLS protection from a connection between a client and a server.	postgresql	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4208
3090	CVE-2017-7484	MEDIUM	High	It was found that some selectivity estimation functions in PostgreSQL before 9.2.21, 9.3.x before 9.3.17, 9.4.x before 9.4.12, 9.5.x before 9.5.7, and 9.6.x before 9.6.3 did not check user privileges before providing information from pg_statistic, possibly leaking information. An unprivileged attacker could use this flaw to steal some information from tables they are otherwise not allowed to access.	postgresql	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4223

	A	B	C	D	E	F	G	H	I	J	K	L	M
3091	CVE-2017-7482	HIGH	HIGH	When a kerberos 5 ticket is being decoded so that it can be loaded into an rxrpc-type key, the length of a variable-length field is checked to make sure that it's not going to overrun the allocated buffer space. The data is padded to the nearest four-byte boundary and the code doesn't check for this extra four-byte aligned padding. This can lead to the size-remaining variable wrapping and the data pointer accessing or reading past the end of the buffer. The read functionality could allow for a 3 byte infoleak and the write flaw could allow for an uncontrolled 3 byte write to kernels slab memory. This could lead to memory corruption and possible privilege escalation although no known exploit exists at the time of writing.	linux	Unchanged	8.0.0.27	9.0.0.17	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4178
3092	CVE-2017-7479	MEDIUM	Medium	OpenVPN versions before 2.3.15 and before 2.4.2 are vulnerable to reachable assertion when packet-ID counter rolls over resulting into Denial of Service of server by authenticated attacker.	openvpn	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4303
3093	CVE-2017-7478	MEDIUM	High	OpenVPN version 2.3.12 and newer is vulnerable to unauthenticated Denial of Service of server via received large control packet. Note that this issue is fixed in 2.3.15 and 2.4.2.	openvpn	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4274
3094	CVE-2017-7477	MEDIUM	High	Heap-based buffer overflow in drivers/net/macsec.c in the MACsec module in the Linux kernel through 4.10.12 allows attackers to cause a denial of service or possibly have unspecified other impact by leveraging the use of a MAX_SKB_FRAGS+1 size in conjunction with the NETIF_F_FRAGLIST feature, leading to an error in the skb_to_sgvec function.	linux	Unchanged	Not vulnerable	9.0.0.7	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4214
3095	CVE-2017-7476	HIGH	Critical	Gnulib before 2017-04-26 has a heap-based buffer overflow with the TZ environment variable. The error is in the save_abbr function in time_rz.c.	gnulib	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4203
3096	CVE-2017-7475	MEDIUM	Medium	Cairo version 1.15.4 is vulnerable to a NULL pointer dereference related to the FT_Load_Glyph and FT_Render_Glyph resulting in an application crash.	cairo	Unchanged	8.0.0.30	9.0.0.21	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4293
3097	CVE-2017-7472	MEDIUM	Medium	The KEYS subsystem in the Linux kernel before 4.10.13 allows local users to cause a denial of service (memory consumption) via a series of KEY_REQKEY_DEFL_THREAD_KEYRING keyctl_set_reqkey_keyring calls.	linux	Unchanged	8.0.0.18	9.0.0.7	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4225
3098	CVE-2017-7471	HIGH	CRITICAL	Quick Emulator(Qemu) built with the VirtFS, host directory sharing via Plan 9 File System(9pfs) support, is vulnerable to an improper access control issue. It could occur while accessing files on a shared host directory.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4202
3099	CVE-2017-7468	MEDIUM	HIGH	libcurl would attempt to resume a TLS session even if the client certificate had changed. That is unacceptable since a server by specification is allowed to skip the client certificate check on resume, and may instead use the old identity which was established by the previous certificate (or no certificate). unexpectedly with an assertion failure via a specially crafted command.	curl	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4035
3100	CVE-2017-7467	HIGH	CRITICAL	A buffer overflow flaw was found in the way minicom before version 2.7.1 handled VT100 escape sequences. A malicious terminal device could potentially use this flaw to crash minicom, or execute arbitrary code in the context of the minicom process.	minicom	Unchanged	8.0.0.27	9.0.0.17	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4306
3101	CVE-2017-7418	LOW	Medium	ProFTPD before 1.3.5e and 1.3.6 before 1.3.6rc5 controls whether the home directory of a user could contain a symbolic link through the AllowChrootSymlinks configuration option, but checks only the last path component when enforcing AllowChrootSymlinks. Attackers with local access could bypass the AllowChrootSymlinks control by replacing a path component (other than the last one) with a symbolic link. The threat model includes an attacker who is not granted full filesystem access by a hosting provider, but can reconfigure the home directory of an FTP user.	proftpd	Unchanged	8.0.0.18	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3879
3102	CVE-2017-7407	LOW	Low	The ourWriteOut function in tool_writeout.c in curl 7.53.1 might allow physically proximate attackers to obtain sensitive information from process memory in opportunistic circumstances by reading a workstation screen during use of a --write-out argument ending in a '%' character, which leads to a heap-based buffer over-read.	curl	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3902
3103	CVE-2017-7401	MEDIUM	High	Incorrect interaction of the parse_packet() and parse_part_sign_sha256() functions in network.c in collectd 5.7.1 and earlier allows remote attackers to cause a denial of service (infinite loop) of a collectd instance (configured with SecurityLevel None and with empty AuthFile options) via a crafted UDP packet.	collectd	Unchanged	8.0.0.18	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3944
3104	CVE-2017-7396	MEDIUM	High	In TigerVNC 1.7.1 (CConnection.cxx CConnection::CConnection), an unauthenticated client can cause a small memory leak in the server.	tigervnc	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3928
3105	CVE-2017-7395	MEDIUM	Medium	In TigerVNC 1.7.1 (SMsgReader.cxx SMsgReader::readClientCutText), by causing an integer overflow, an authenticated client can crash the server.	tigervnc	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3935
3106	CVE-2017-7394	MEDIUM	High	In TigerVNC 1.7.1 (SSecurityPlain.cxx SSecurityPlain::processMsg), unauthenticated users can crash the server by sending long usernames.	tigervnc	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3908
3107	CVE-2017-7393	MEDIUM	High	In TigerVNC 1.7.1 (VNCSConnectionST.cxx VNCSConnectionST::fence), an authenticated client can cause a double free, leading to denial of service or potentially code execution.	tigervnc	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3887
3108	CVE-2017-7392	MEDIUM	High	In TigerVNC 1.7.1 (SSecurityVeNCrypt.cxx SSecurityVeNCrypt::SSecurityVeNCrypt), an unauthenticated client can cause a small memory leak in the server.	tigervnc	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3969
3109	CVE-2017-7377	LOW	Medium	The (1) v9fs_create and (2) v9fs_lcreate functions in hw/9pfs/9p.c in QEMU (aka Quick Emulator) allow local guest OS privileged users to cause a denial of service (file descriptor or memory consumption) via vectors related to an already in-use fid.	qemu	Unchanged	8.0.0.18	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3947

	A	B	C	D	E	F	G	H	I	J	K	L	M
3110	CVE-2017-7376	HIGH	CRITICAL	Buffer overflow in libxml2 allows remote attackers to execute arbitrary code by leveraging an incorrect limit for port values when handling redirects.	libxml2	Unchanged	8.0.0.26	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3315
3111	CVE-2017-7375	HIGH	CRITICAL	A flaw in libxml2 allows remote XML entity inclusion with default parser flags (i.e., when the caller did not request entity substitution, DTD validation, external DTD subset loading, or default DTD attributes). Depending on the context, this may expose a higher-risk attack surface in libxml2 not usually reachable with default parser flags, and expose content from local files, HTTP, or FTP servers (which might be otherwise unreachable).	libxml2	Unchanged	8.0.0.26	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3368
3112	CVE-2017-7374	HIGH	High	Use-after-free vulnerability in fs/crypto/ in the Linux kernel before 4.10.7 allows local users to cause a denial of service (NULL pointer dereference) or possibly gain privileges by revoking keyring keys being used for ext4, f2fs, or ubifs encryption, causing cryptographic transform objects to be freed prematurely.	linux	Unchanged	Not vulnerable	9.0.0.6	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3937
3113	CVE-2017-7346	MEDIUM	Medium	The vmw_gb_surface_define_ioctl function in drivers/gpu/drm/vmwgfx/vmwgfx_surface.c in the Linux kernel through 4.10.7 does not validate certain levels data, which allows local users to cause a denial of service (system hang) via a crafted ioctl call for a /dev/dri/renderD* device.	linux	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3958
3114	CVE-2017-7319			A vulnerability in the Linux kernel package 3.16.0-28 on Ubuntu 14.04 LTS allows any user to send a SIGIO signal to any process. If the process does not catch or ignore the signal, it will exit.	linux	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3881
3115	CVE-2017-7308	HIGH	High	The packet_set_ring function in net/packet/af_packet.c in the Linux kernel through 4.10.6 does not properly validate certain block-size data, which allows local users to cause a denial of service (overflow) or possibly have unspecified other impact via crafted system calls.	linux	Unchanged	8.0.0.17	9.0.0.6	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3904
3116	CVE-2017-7304	MEDIUM	High	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, is vulnerable to an invalid read (of size 8) because of missing a check (in the copy_special_section_fields function) for an invalid sh_link field before attempting to follow it. This vulnerability causes Binutils utilities like strip to crash.	binutils	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3961
3117	CVE-2017-7303	MEDIUM	High	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, is vulnerable to an invalid read (of size 4) because of missing a check (in the find_link function) for null headers before attempting to match them. This vulnerability causes Binutils utilities like strip to crash.	binutils	Unchanged	Not vulnerable	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3900
3118	CVE-2017-7302	MEDIUM	High	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, has a swap_std_reloc_out function in bfd/aoutx.h that is vulnerable to an invalid read (of size 4) because of missing checks for relocs that could not be recognised. This vulnerability causes Binutils utilities like strip to crash.	binutils	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3888
3119	CVE-2017-7301	MEDIUM	High	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, has an aout_link_add_symbols function in bfd/aoutx.h that has an off-by-one vulnerability because it does not carefully check the string offset. The vulnerability could lead to a GNU linker (ld) program crash.	binutils	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3950
3120	CVE-2017-7300	MEDIUM	High	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, has an aout_link_add_symbols function in bfd/aoutx.h that is vulnerable to a heap-based buffer over-read (off-by-one) because of an incomplete check for invalid string offsets while loading symbols, leading to a GNU linker (ld) program crash.	binutils	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3941
3121	CVE-2017-7299	MEDIUM	Medium	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, has an invalid read (of size 8) because the code to emit relocs (bfd_elf_final_link function in bfd/elflink.c) does not check the format of the input file before trying to read the ELF reloc section header. The vulnerability leads to a GNU linker (ld) program crash.	binutils	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3956
3122	CVE-2017-7294	HIGH	High	The vmw_surface_define_ioctl function in drivers/gpu/drm/vmwgfx/vmwgfx_surface.c in the Linux kernel through 4.10.6 does not validate addition of certain levels data, which allows local users to trigger an integer overflow and out-of-bounds write, and cause a denial of service (system hang or crash) or possibly gain privileges, via a crafted ioctl call for a /dev/dri/renderD* device.	linux	Unchanged	8.0.0.17	9.0.0.6	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3929
3123	CVE-2017-7286			The Linux kernel package 3.16.0-28 on Ubuntu 14.04 LTS mishandles a series of mmap system calls for /dev/zero with different starting addresses, with a stated impact of allowing for a local user to possibly gain root access, aka an inode integer overflow.	linux	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3959
3124	CVE-2017-7277	MEDIUM	High	The TCP stack in the Linux kernel through 4.10.6 mishandles the SCM_TIMESTAMPING_OPT_STATS feature, which allows local users to obtain sensitive information from the kernel's internal socket data structures or cause a denial of service (out-of-bounds read) via crafted system calls, related to net/core/skbuff.c and net/socket.c.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3687
3125	CVE-2017-7275	MEDIUM	Medium	The ReadPCXImage function in coders/pcx.c in ImageMagick 7.0.4.9 allows remote attackers to cause a denial of service (attempted large memory allocation and application crash) via a crafted file. NOTE: this vulnerability exists because of an incomplete fix for CVE-2016-8862 and CVE-2016-8866.	imagemagick	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3815

	A	B	C	D	E	F	G	H	I	J	K	L	M
3126	CVE-2017-7273	MEDIUM	Medium	The cp_report_fixup function in drivers/hid/hid-cypress.c in the Linux kernel 4.x before 4.9.4 allows physically proximate attackers to cause a denial of service (integer underflow) or possibly have unspecified other impact via a crafted HID report.	linux	Unchanged	8.0.0.16	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3717
3127	CVE-2017-7272	MEDIUM	High	PHP through 7.1.3 enables potential SSRF in applications that accept an fsockopen hostname argument with an expectation that the port number is constrained. Because a :port syntax is recognized, fsockopen will use the port number that is specified in the hostname argument, instead of the port number in the second argument of the function.	php	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3781
3128	CVE-2017-7261	MEDIUM	Medium	The vmw_surface_define_ioctl function in drivers/gpu/drm/vmwgfx/vmwgfx_surface.c in the Linux kernel through 4.10.5 does not check for a zero value of certain levels data, which allows local users to cause a denial of service (ZERO_SIZE_PTR dereference, and GPF and possibly panic) via a crafted ioctl call for a /dev/dri/renderD* device.	linux	Unchanged	8.0.0.23	9.0.0.11	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3664
3129	CVE-2017-7246	MEDIUM	High	Stack-based buffer overflow in the pcre32_copy_substring function in pcre_get.c in libpcre1 in PCRE 8.40 allows remote attackers to cause a denial of service (WRITE of size 268) or possibly have unspecified other impact via a crafted file.	pcre	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3728
3130	CVE-2017-7245	MEDIUM	High	Stack-based buffer overflow in the pcre32_copy_substring function in pcre_get.c in libpcre1 in PCRE 8.40 allows remote attackers to cause a denial of service (WRITE of size 4) or possibly have unspecified other impact via a crafted file.	pcre	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3774
3131	CVE-2017-7244	MEDIUM	Medium	The _pcre32_xclass function in pcre_xclass.c in libpcre1 in PCRE 8.40 allows remote attackers to cause a denial of service (invalid memory read) via a crafted file.	pcre	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3765
3132	CVE-2017-7227	MEDIUM	High	GNU linker (ld) in GNU Binutils 2.28 is vulnerable to a heap-based buffer overflow while processing a bogus input script, leading to a program crash. This relates to lack of '\0' termination of a name field in ldlex.l.	binutils	Unchanged	8.0.0.19	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3809
3133	CVE-2017-7226	MEDIUM	Critical	The pe_ILF_object_p function in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.28, is vulnerable to a heap-based buffer over-read of size 4049 because it uses the strlen function instead of strnlen, leading to program crashes in several utilities such as addr2line, size, and strings. It could lead to information disclosure as well.	binutils	Unchanged	8.0.0.19	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3640
3134	CVE-2017-7225	MEDIUM	High	The find_nearest_line function in addr2line in GNU Binutils 2.28 does not handle the case where the main file name and the directory name are both empty, triggering a NULL pointer dereference and an invalid write, and leading to a program crash.	binutils	Unchanged	8.0.0.19	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3735
3135	CVE-2017-7224	MEDIUM	Medium	The find_nearest_line function in objdump in GNU Binutils 2.28 is vulnerable to an invalid write (of size 1) while disassembling a corrupt binary that contains an empty function name, leading to a program crash.	binutils	Unchanged	8.0.0.19	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3721
3136	CVE-2017-7223	MEDIUM	High	GNU assembler in GNU Binutils 2.28 is vulnerable to a global buffer overflow (of size 1) while attempting to unget an EOF character from the input stream, potentially leading to a program crash.	binutils	Unchanged	8.0.0.19	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3710
3137	CVE-2017-7210	MEDIUM	Medium	objdump in GNU Binutils 2.28 is vulnerable to multiple heap-based buffer over-reads (of size 1 and size 8) while handling corrupt STABS enum type strings in a crafted object file, leading to program crash.	binutils	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3793
3138	CVE-2017-7209	MEDIUM	Medium	The dump_section_as_bytes function in readelf in GNU Binutils 2.28 accesses a NULL pointer while reading section contents in a corrupt binary, leading to a program crash.	binutils	Unchanged	Not vulnerable	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3817
3139	CVE-2017-7208	MEDIUM	High	The decode_residual function in libavcodec in libav 9.21 allows remote attackers to cause a denial of service (buffer over-read) or obtain sensitive information from process memory via a crafted h264 video file.	libav	Unchanged	8.0.0.18	9.0.0.6	10.17.41.3	10.18.44.1	Won't Fix	Won't Fix	LIN9-3812
3140	CVE-2017-7207	MEDIUM	Medium	The mem_get_bits_rectangle function in Artifex Software, Inc. Ghostscript 9.20 allows remote attackers to cause a denial of service (NULL pointer dereference) via a crafted PostScript document.	ghostscript	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3736
3141	CVE-2017-7206	MEDIUM	High	The ff_h2645_extract_rbsp function in libavcodec in libav 9.21 allows remote attackers to cause a denial of service (heap-based buffer over-read) or obtain sensitive information from process memory via a crafted h264 video file.	libav	Unchanged	Not vulnerable	9.0.0.19	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3688
3142	CVE-2017-7191	HIGH	Critical	The netjoin processing in Irssi 1.x before 1.0.2 allows attackers to cause a denial of service (use-after-free) and possibly execute arbitrary code via unspecified vectors.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3787
3143	CVE-2017-7189	MEDIUM	HIGH	main/streams/xp_socket.c in PHP 7.x before 2017-03-07 misparses fsockopen calls, such as by interpreting fsockopen('127.0.0.1:80', 443) as if the address/port were 127.0.0.1:80:443, which is later truncated to 127.0.0.1:80. This behavior has a security risk if the explicitly provided port number (i.e., 443 in this example) is hardcoded into an application as a security policy, but the hostname argument (i.e., 127.0.0.1:80 in this example) is obtained from untrusted input.	php	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	LIN1018-4419
3144	CVE-2017-7187	HIGH	High	The sg_ioctl function in drivers/scsi/sg.c in the Linux kernel through 4.10.4 allows local users to cause a denial of service (stack-based buffer overflow) or possibly have unspecified other impact via a large command size in an SG_NEXT_CMD_LEN ioctl call, leading to out-of-bounds write access in the sg_write function.	linux	Unchanged	8.0.0.17	9.0.0.6	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3816
3145	CVE-2017-7186	MEDIUM	High	libpcre1 in PCRE 8.40 and libpcre2 in PCRE2 10.23 allow remote attackers to cause a denial of service (segmentation violation for read access, and application crash) by triggering an invalid Unicode property lookup.	pcre	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3671

	A	B	C	D	E	F	G	H	I	J	K	L	M
3146	CVE-2017-7184	HIGH	High	The linux-image-* package 4.8.0.41.52 for the Linux kernel on Ubuntu 16.10 allows local users to obtain root privileges or cause a denial of service (heap-based out-of-bounds access) via unspecified vectors, as demonstrated during a Pwn2Own competition at CanSecWest 2017.	linux	Unchanged	8.0.0.28	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4209
3147	CVE-2017-7177	MEDIUM	High	Suricata before 3.2.1 has an IPv4 defragmentation evasion issue caused by lack of a check for the IP protocol during fragment matching.	suricata	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3655
3148	CVE-2017-6969	MEDIUM	Critical	readelf in GNU Binutils 2.28 is vulnerable to a heap-based buffer over-read while processing corrupt RL78 binaries. The vulnerability can trigger program crashes. It may lead to an information leak as well.	binutils	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3709
3149	CVE-2017-6966	MEDIUM	Medium	readelf in GNU Binutils 2.28 has a use-after-free (specifically read-after-free) error while processing multiple, relocated sections in an MSP430 binary. This is caused by mishandling of an invalid symbol index, and mishandling of state across invocations.	binutils	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3639
3150	CVE-2017-6965	MEDIUM	Medium	readelf in GNU Binutils 2.28 writes to illegal addresses while processing corrupt input files containing symbol-difference relocations, leading to a heap-based buffer overflow.	binutils	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3682
3151	CVE-2017-6964	HIGH	High	dmcrypt-get-device, as shipped in the eject package of Debian and Ubuntu, does not check the return value of the (1) setuid or (2) setgid function, which might cause dmcrypt-get-device to execute code, which was intended to run as an unprivileged user, as root. This affects eject through 2.1.5+deb1+cvs20081104-13.1 on Debian, eject before 2.1.5+deb1+cvs20081104-13.1ubuntu0.16.10.1 on Ubuntu 16.10, eject before 2.1.5+deb1+cvs20081104-13.1ubuntu0.16.04.1 on Ubuntu 16.04 LTS, eject before 2.1.5+deb1+cvs20081104-13.1ubuntu0.14.04.1 on Ubuntu 14.04 LTS, and eject before 2.1.5+deb1+cvs20081104-9ubuntu0.1 on Ubuntu 12.04 LTS.	eject	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3686
3152	CVE-2017-6951	MEDIUM	Medium	The keyring_search_aux function in security/keys/keyring.c in the Linux kernel through 3.14.79 allows local users to cause a denial of service (NULL pointer dereference and OOPS) via a request_key system call for the dead type.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3789
3153	CVE-2017-6892	MEDIUM	High	In libsndfile version 1.0.28, an error in the aiff_read_chanmap() function (aiff.c) can be exploited to cause an out-of-bounds read memory access via a specially crafted AIFF file.	libsndfile	Unchanged	8.0.0.19	9.0.0.8	10.0.0.0	10.18.44.1	10.19.45.1	Not vulnerable	LIN9-4420
3154	CVE-2017-6891	MEDIUM	High	Two errors in the asn1_find_node() function (lib/parser_aux.c) within GnuTLS libtasn1 version 4.10 can be exploited to cause a stacked-based buffer overflow by tricking a user into processing a specially crafted assignments file via the e.g. asn1Coding utility.	gnutls&libtasn1	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4295
3155	CVE-2017-6888	MEDIUM	MEDIUM	An error in the read_metadata_vorbiscomment_() function (src/libFLAC/stream_decoder.c) in FLAC version 1.3.2 can be exploited to cause a memory leak via a specially crafted FLAC file.	flac	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	10.18.44.1	10.19.45.1	Not vulnerable	LIN10-3873
3156	CVE-2017-6874	MEDIUM	High	Race condition in kernel/ucount.c in the Linux kernel through 4.10.2 allows local users to cause a denial of service (use-after-free and system crash) or possibly have unspecified other impact via crafted system calls that leverage certain decrement behavior that causes incorrect interaction between put_ucounts and get_ucounts.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3705
3157	CVE-2017-6852	MEDIUM	High	Heap-based buffer overflow in the jpc_dec_decodepkt function in jpc_t2dec.c in JasPer 2.0.10 allows remote attackers to have unspecified impact via a crafted image.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3677
3158	CVE-2017-6851	MEDIUM	Medium	The jas_matrix_bindsub function in jas_seq.c in JasPer 2.0.10 allows remote attackers to cause a denial of service (invalid read) via a crafted image.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3811
3159	CVE-2017-6850	MEDIUM	Medium	The jp2_cdef_destroy function in jp2_cod.c in JasPer before 2.0.13 allows remote attackers to cause a denial of service (NULL pointer dereference) via a crafted image.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3755
3160	CVE-2017-6839	MEDIUM	Medium	Integer overflow in modules/MSADPCM.cpp in Audio File Library (aka audiofile) 0.3.6 allows remote attackers to cause a denial of service (crash) via a crafted file.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3822
3161	CVE-2017-6838	MEDIUM	Medium	Integer overflow in sfcommands/sfconvert.c in Audio File Library (aka audiofile) 0.3.6 allows remote attackers to cause a denial of service (crash) via a crafted file.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3754
3162	CVE-2017-6837	MEDIUM	Medium	WAVE.cpp in Audio File Library (aka audiofile) 0.3.6 allows remote attackers to cause a denial of service (crash) via vectors related to a large number of coefficients.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3642
3163	CVE-2017-6836	MEDIUM	Medium	Heap-based buffer overflow in the Expand3To4Module::run function in libaudiofile/modules/SimpleModule.h in Audio File Library (aka audiofile) 0.3.6 allows remote attackers to cause a denial of service (crash) via a crafted file.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3643
3164	CVE-2017-6835	MEDIUM	Medium	The reset1 function in libaudiofile/modules/BlockCodec.cpp in Audio File Library (aka audiofile) 0.3.6 allows remote attackers to cause a denial of service (divide-by-zero error and crash) via a crafted file.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3726
3165	CVE-2017-6834	MEDIUM	Medium	Heap-based buffer overflow in the ulaw2linear_buf function in G711.cpp in Audio File Library (aka audiofile) 0.3.6 allows remote attackers to cause a denial of service (crash) via a crafted file.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3794
3166	CVE-2017-6833	MEDIUM	Medium	The runPull function in libaudiofile/modules/BlockCodec.cpp in Audio File Library (aka audiofile) 0.3.6 allows remote attackers to cause a denial of service (divide-by-zero error and crash) via a crafted file.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3742
3167	CVE-2017-6832	MEDIUM	Medium	Heap-based buffer overflow in the decodeBlock in MSADPCM.cpp in Audio File Library (aka audiofile) 0.3.6 allows remote attackers to cause a denial of service (crash) via a crafted file.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3740

3168	CVE-2017-6831	MEDIUM	Medium	Heap-based buffer overflow in the decodeBlockWAVE function in IMA.cpp in Audio File Library (aka audiofile) 0.3.6 allows remote attackers to cause a denial of service (crash) via a crafted file.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3706
3169	CVE-2017-6830	MEDIUM	Medium	Heap-based buffer overflow in the alaw2linear_buf function in G711.cpp in Audio File Library (aka audiofile) 0.3.6 allows remote attackers to cause a denial of service (crash) via a crafted file.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3741
3170	CVE-2017-6829	MEDIUM	Medium	The decodeSample function in IMA.cpp in Audio File Library (aka audiofile) 0.3.6 allows remote attackers to cause a denial of service (crash) via a crafted file.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3679
3171	CVE-2017-6828	MEDIUM	High	Heap-based buffer overflow in the readValue function in FileHandle.cpp in audiofile (aka libaudiofile and Audio File Library) 0.3.6 allows remote attackers to have unspecified impact via a crafted WAV file.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3799
3172	CVE-2017-6827	MEDIUM	High	Heap-based buffer overflow in the MSADPCM::initializeCoefficients function in MSADPCM.cpp in audiofile (aka libaudiofile and Audio File Library) 0.3.6 allows remote attackers to have unspecified impact via a crafted audio file.	audiofile	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3685
3173	CVE-2017-6519	MEDIUM	Critical	avahi-daemon in Avahi through 0.6.32 inadvertently responds to IPv6 unicast queries with source addresses that are not on-link, which allows remote attackers to cause a denial of service (traffic amplification) or obtain potentially sensitive information via port-5353 UDP packets. NOTE: this may overlap CVE-2015-2809.	avahi	Unchanged	Investigate	Investigate	Investigate	Investigate	10.19.45.1	Not vulnerable	LIN1018-3493
3174	CVE-2017-6508	MEDIUM	Medium	CRLF injection vulnerability in the url_parse function in url.c in Wget through 1.19.1 allows remote attackers to inject arbitrary HTTP headers via CRLF sequences in the host subcomponent of a URL.	wget	Unchanged	8.0.0.16	9.0.0.5	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3519
3175	CVE-2017-6505	LOW	Medium	The ohci_service_ed_list function in hw/usb/hcd-ohci.c in QEMU (aka Quick Emulator) allows local guest OS users to cause a denial of service (infinite loop) via vectors involving the number of link endpoint list descriptors.	qemu	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3803
3176	CVE-2017-6502	MEDIUM	Medium	An issue was discovered in ImageMagick 6.9.7. A specially crafted webp file could lead to a file-descriptor leak in libmagickcore (thus, a DoS).	imagemagick	Unchanged	8.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3500
3177	CVE-2017-6501	MEDIUM	Medium	An issue was discovered in ImageMagick 6.9.7. A specially crafted xcf file could lead to a NULL pointer dereference.	imagemagick	Unchanged	8.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3509
3178	CVE-2017-6500	MEDIUM	Medium	An issue was discovered in ImageMagick 6.9.7. A specially crafted sun file triggers a heap-based buffer over-read.	imagemagick	Unchanged	8.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3533
3179	CVE-2017-6499	MEDIUM	Medium	An issue was discovered in Magick++ in ImageMagick 6.9.7. A specially crafted file creating a nested exception could lead to a memory leak (thus, a DoS).	imagemagick	Unchanged	8.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3588
3180	CVE-2017-6498	MEDIUM	Medium	An issue was discovered in ImageMagick 6.9.7. Incorrect TGA files could trigger assertion failures, thus leading to DoS.	imagemagick	Unchanged	8.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3510
3181	CVE-2017-6497	MEDIUM	High	An issue was discovered in ImageMagick 6.9.7. A specially crafted psd file could lead to a NULL pointer dereference (thus, a DoS).	imagemagick	Unchanged	8.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3534
3182	CVE-2017-6474	MEDIUM	High	In Wireshark 2.2.0 to 2.2.4 and 2.0.0 to 2.0.10, there is a NetScaler file parser infinite loop, triggered by a malformed capture file. This was addressed in wiretap/netscaler.c by validating record sizes.	wireshark	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3508
3183	CVE-2017-6473	MEDIUM	High	In Wireshark 2.2.0 to 2.2.4 and 2.0.0 to 2.0.10, there is a K12 file parser crash, triggered by a malformed capture file. This was addressed in wiretap/k12.c by validating the relationships between lengths and offsets.	wireshark	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3587
3184	CVE-2017-6472	MEDIUM	High	In Wireshark 2.2.0 to 2.2.4 and 2.0.0 to 2.0.10, there is an RTMPT dissector infinite loop, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-rtmpt.c by properly incrementing a certain sequence value.	wireshark	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3520
3185	CVE-2017-6471	MEDIUM	High	In Wireshark 2.2.0 to 2.2.4 and 2.0.0 to 2.0.10, there is a WSP infinite loop, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-wsp.c by validating the capability length.	wireshark	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3507
3186	CVE-2017-6470	HIGH	High	In Wireshark 2.2.0 to 2.2.4 and 2.0.0 to 2.0.10, there is an IAX2 infinite loop, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-iax2.c by constraining packet lateness.	wireshark	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3527
3187	CVE-2017-6469	MEDIUM	High	In Wireshark 2.2.0 to 2.2.4 and 2.0.0 to 2.0.10, there is an LDSS dissector crash, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-ldss.c by ensuring that memory is allocated for a certain data structure.	wireshark	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3536
3188	CVE-2017-6468	MEDIUM	High	In Wireshark 2.2.0 to 2.2.4 and 2.0.0 to 2.0.10, there is a NetScaler file parser crash, triggered by a malformed capture file. This was addressed in wiretap/netscaler.c by validating the relationship between pages and records.	wireshark	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3584
3189	CVE-2017-6467	MEDIUM	High	In Wireshark 2.2.0 to 2.2.4 and 2.0.0 to 2.0.10, there is a Netscaler file parser infinite loop, triggered by a malformed capture file. This was addressed in wiretap/netscaler.c by changing the restrictions on file size.	wireshark	Unchanged	8.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3537
3190	CVE-2017-6464	MEDIUM	Medium	NTP before 4.2.8p10 and 4.3.x before 4.3.94 allows remote attackers to cause a denial of service (ntpd crash) via a malformed mode configuration directive.	ntp	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3616
3191	CVE-2017-6463	MEDIUM	Medium	NTP before 4.2.8p10 and 4.3.x before 4.3.94 allows remote authenticated users to cause a denial of service (daemon crash) via an invalid setting in a :config directive, related to the unpeer option.	ntp	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3618
3192	CVE-2017-6462	MEDIUM	High	Buffer overflow in the legacy Datum Programmable Time Server (DPTS) refclock driver in NTP before 4.2.8p10 and 4.3.x before 4.3.94 allows local users to have unspecified impact via a crafted /dev/datum device.	ntp	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3617

	A	B	C	D	E	F	G	H	I	J	K	L	M
3193	CVE-2017-6460	MEDIUM	High	Stack-based buffer overflow in the resIist function in ntpq in NTP before 4.2.8p10 and 4.3.x before 4.3.94 allows remote servers have unspecified impact via a long flagstr variable in a restriction list response.	ntp	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3624
3194	CVE-2017-6459	LOW	Medium	The Windows installer for NTP before 4.2.8p10 and 4.3.x before 4.3.94 allows local users to have unspecified impact via vectors related to an argument with multiple null bytes.	ntp	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3621
3195	CVE-2017-6458	MEDIUM	High	Multiple buffer overflows in the ctl_put* functions in NTP before 4.2.8p10 and 4.3.x before 4.3.94 allow remote authenticated users to have unspecified impact via a long variable.	ntp	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3622
3196	CVE-2017-6455	MEDIUM	High	NTP before 4.2.8p10 and 4.3.x before 4.3.94, when using PPSAPI, allows local users to gain privileges via a DLL in the PPSAPI_DLLS environment variable.	ntp	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3619
3197	CVE-2017-6452	MEDIUM	High	Stack-based buffer overflow in the Windows installer for NTP before 4.2.8p10 and 4.3.x before 4.3.94 allows local users to have unspecified impact via an application path on the command line.	ntp	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3620
3198	CVE-2017-6451	MEDIUM	High	The mx4200_send function in the legacy MX4200 refclock in NTP before 4.2.8p10 and 4.3.x before 4.3.94 does not properly handle the return value of the snprintf function, which allows local users to execute arbitrary code via unspecified vectors, which trigger an out-of-bounds memory write.	ntp	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3623
3199	CVE-2017-6440	LOW	Medium	The parse_data_node function in bplist.c in libimobiledevice libplist 1.12 allows local users to cause a denial of service (memory allocation error) via a crafted plist file.	libplist	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3648
3200	CVE-2017-6439	LOW	Medium	Heap-based buffer overflow in the parse_string_node function in bplist.c in libimobiledevice libplist 1.12 allows local users to cause a denial of service (out-of-bounds write) via a crafted plist file.	libplist	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3776
3201	CVE-2017-6438	MEDIUM	High	Heap-based buffer overflow in the parse_unicode_node function in bplist.c in libimobiledevice libplist 1.12 allows local users to cause a denial of service (out-of-bounds write) and possibly code execution via a crafted plist file.	libplist	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3730
3202	CVE-2017-6437	LOW	Medium	The base64encode function in base64.c in libimobiledevice libplist 1.12 allows local users to cause a denial of service (out-of-bounds read) via a crafted plist file.	libplist	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3698
3203	CVE-2017-6436	LOW	Medium	The parse_string_node function in bplist.c in libimobiledevice libplist 1.12 allows local users to cause a denial of service (memory allocation error) via a crafted plist file.	libplist	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3756
3204	CVE-2017-6435	LOW	Medium	The parse_string_node function in bplist.c in libimobiledevice libplist 1.12 allows local users to cause a denial of service (memory corruption) via a crafted plist file.	libplist	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3788
3205	CVE-2017-6429	MEDIUM	High	Buffer overflow in the tcpcapinfo utility in Tcpreplay before 4.2.0 Beta 1 allows remote attackers to have unspecified impact via a pcap file with an over-size packet.	tcpreplay	Unchanged	Not vulnerable	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3780
3206	CVE-2017-6420	Medium	Medium	The wwunpack function in libclamav/wwunpack.c in ClamAV 0.99.2 allows remote attackers to cause a denial of service (use-after-free) via a crafted PE file with WWPack compression.	clamav	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4994
3207	CVE-2017-6419	Medium	High	mspack/lzxd.c in libmspack 0.5alpha, as used in ClamAV 0.99.2, allows remote attackers to cause a denial of service (heap-based buffer overflow and application crash) or possibly have unspecified other impact via a crafted CHM file.	clamav	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5091
3208	CVE-2017-6418	Medium	Medium	libclamav/message.c in ClamAV 0.99.2 allows remote attackers to cause a denial of service (out-of-bounds read) via a crafted e-mail message.	clamav	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4976
3209	CVE-2017-6363	MEDIUM	HIGH	** DISPUTED ** In the GD Graphics Library (aka LibGD) through 2.2.5, there is a heap-based buffer over-read in tiffWriter in gd_tiff.c. NOTE: the vendor says In my opinion this issue should not have a CVE, since the GD and GD2 formats are documented to be 'obsolete, and should only be used for development and testing purposes.'	gd	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.6	Vulnerable	LIN1019-4099
3210	CVE-2017-6353	MEDIUM	Medium	net/sctp/socket.c in the Linux kernel through 4.10.1 does not properly restrict association peel-off operations during certain wait states, which allows local users to cause a denial of service (invalid unlock and double free) via a multithreaded application. NOTE: this vulnerability exists because of an incorrect fix for CVE-2017-5986.	linux	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3549
3211	CVE-2017-6350	HIGH	Critical	An integer overflow at an unserialize_uep memory allocation site would occur for vim before patch 8.0.0378, if it does not properly validate values for tree length when reading a corrupted undo file, which may lead to resultant buffer overflows.	vim	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3551
3212	CVE-2017-6349	HIGH	Critical	An integer overflow at a u_read_undo memory allocation site would occur for vim before patch 8.0.0377, if it does not properly validate values for tree length when reading a corrupted undo file, which may lead to resultant buffer overflows.	vim	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3503
3213	CVE-2017-6348	MEDIUM	Medium	The hashbin_delete function in net/irda/irqueue.c in the Linux kernel before 4.9.13 improperly manages lock dropping, which allows local users to cause a denial of service (deadlock) via crafted operations on IrDA devices.	linux	Unchanged	8.0.0.16	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3532
3214	CVE-2017-6347	HIGH	High	The ip_cmsg_recv_checksum function in net/ipv4/ip_sockglue.c in the Linux kernel before 4.10.1 has incorrect expectations about skb data layout, which allows local users to cause a denial of service (buffer over-read) or possibly have unspecified other impact via crafted system calls, as demonstrated by use of the MSG_MORE flag in conjunction with loopback UDP transmission.	linux	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3581
3215	CVE-2017-6346	MEDIUM	High	Race condition in net/packet/af_packet.c in the Linux kernel before 4.9.13 allows local users to cause a denial of service (use-after-free) or possibly have unspecified other impact via a multithreaded application that makes PACKET_FANOUT setsockopt system calls.	linux	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3511

	A	B	C	D	E	F	G	H	I	J	K	L	M
3216	CVE-2017-6345	MEDIUM	High	The LLC subsystem in the Linux kernel before 4.9.13 does not ensure that a certain destructor exists in required circumstances, which allows local users to cause a denial of service (BUG_ON) or possibly have unspecified other impact via crafted system calls.	linux	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3580
3217	CVE-2017-6314	MEDIUM	Medium	The make_available_at_least function in io-tiff.c in gdk-pixbuf allows context-dependent attackers to cause a denial of service (infinite loop) via a large TIFF file.	gdk-pixbuf	Unchanged	8.0.0.25	9.0.0.15	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3530
3218	CVE-2017-6313	MEDIUM	Medium	Integer underflow in the load_resources function in io-icns.c in gdk-pixbuf allows context-dependent attackers to cause a denial of service (out-of-bounds read and program crash) via a crafted image entry size in an ICO file.	gdk-pixbuf	Unchanged	8.0.0.25	9.0.0.15	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3568
3219	CVE-2017-6312	MEDIUM	Medium	Integer overflow in io-ico.c in gdk-pixbuf allows context-dependent attackers to cause a denial of service (segmentation fault and application crash) via a crafted image entry offset in an ICO file, which triggers an out-of-bounds read, related to compiler optimizations.	gdk-pixbuf	Unchanged	8.0.0.25	9.0.0.15	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3567
3220	CVE-2017-6311	MEDIUM	High	gdk-pixbuf-thumbnailer.c in gdk-pixbuf allows context-dependent attackers to cause a denial of service (NULL pointer dereference and application crash) via vectors related to printing an error message.	gdk-pixbuf	Unchanged	8.0.0.25	9.0.0.15	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3528
3221	CVE-2017-6214	MEDIUM	High	The tcp_splice_read function in net/ipv4/tcp.c in the Linux kernel before 4.9.11 allows remote attackers to cause a denial of service (infinite loop and soft lockup) via vectors involving a TCP packet with the URG flag.	linux	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3409
3222	CVE-2017-6196	MEDIUM	High	Multiple use-after-free vulnerabilities in the gx_image_enum_begin function in base/gximage.c in Ghostscript before ecceafe3abba2714ef9b432035fe0739d9b1a283 allow remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted PostScript document.	ghostscript	Unchanged	8.0.0.26	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3385
3223	CVE-2017-6181	MEDIUM	High	The parse_char_class function in regparse.c in the Onigmo (aka Oniguruma-mod) regular expression library, as used in Ruby 2.4.0, allows remote attackers to cause a denial of service (deep recursion and application crash) via a crafted regular expression.	ruby	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3911
3224	CVE-2017-6076	LOW	Medium	In versions of wolfSSL before 3.10.2 the function fp_mul_comba makes it easier to extract RSA key information for a malicious user who has access to view cache on a machine.	wolfssl	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3405
3225	CVE-2017-6074	HIGH	High	The dccp_rcv_state_process function in net/dccp/input.c in the Linux kernel through 4.9.11 mishandles DCCP_PKT_REQUEST packet data structures in the LISTEN state, which allows local users to obtain root privileges or cause a denial of service (double free) via an application that makes an IPV6_RECVPKTINFO setsockopt system call.	linux	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3353
3226	CVE-2017-6058	MEDIUM	High	Buffer overflow in NetRxPkt::ehdr_buf in hw/net/net_rx_pkt.c in QEMU (aka Quick Emulator), when the VLANSTRIP feature is enabled on the vmxnet3 device, allows remote attackers to cause a denial of service (out-of-bounds access and QEMU process crash) via vectors related to VLAN stripping.	qemu	Unchanged	Not vulnerable	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3747
3227	CVE-2017-6014	HIGH	High	In Wireshark 2.2.4 and earlier, a crafted or malformed STANAG 4607 capture file will cause an infinite loop and memory exhaustion. If the packet size field in a packet header is null, the offset to read from will not advance, causing continuous attempts to read the same zero length packet. This will quickly exhaust all system memory.	wireshark	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3377
3228	CVE-2017-6004	MEDIUM	High	The compile_bracket_matchingpath function in pcre_jit_compile.c in PCRE through 8.x before revision 1680 (e.g., the PHP 7.1.1 bundled version) allows remote attackers to cause a denial of service (out-of-bounds read and application crash) via a crafted regular expression.	pcre	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3387
3229	CVE-2017-6001	HIGH	High	Race condition in kernel/events/core.c in the Linux kernel before 4.9.7 allows local users to gain privileges via a crafted application that makes concurrent perf_event_open system calls for moving a software group into a hardware context. NOTE: this vulnerability exists because of an incomplete fix for CVE-2016-6786.	linux	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3386
3230	CVE-2017-5987	LOW	Medium	The sdhci_sdma_transfer_multi_blocks function in hw/sd/sdhci.c in QEMU (aka Quick Emulator) allows local OS guest privileged users to cause a denial of service (infinite loop and QEMU process crash) via vectors involving the transfer mode register during multi block transfer.	qemu	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3712
3231	CVE-2017-5986	HIGH	Medium	Race condition in the sctp_wait_for_sndbuf function in net/sctp/socket.c in the Linux kernel before 4.9.11 allows local users to cause a denial of service (assertion failure and panic) via a multithreaded application that peels off an association in a certain buffer-full state.	linux	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3429
3232	CVE-2017-5985	LOW	Low	lxc-user-nic in Linux Containers (LXC) allows local users with a lxc-usernet allocation to create network interfaces on the host and choose the name of those interfaces by leveraging lack of netns ownership check.	lxc	Unchanged	8.0.0.18	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3678
3233	CVE-2017-5984	Medium	MEDIUM	In libavcodec in Libav 9.21, ff_h264_execute_ref_pic_marking() has a heap-based buffer over-read.	libav	Unchanged	Vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN8-10956
3234	CVE-2017-5973	LOW	Medium	The xhci_kick_epctx function in hw/usb/hcd-xhci.c in QEMU (aka Quick Emulator) allows local guest OS privileged users to cause a denial of service (infinite loop and QEMU process crash) via vectors related to control transfer descriptor sequence.	qemu	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3673

	A	B	C	D	E	F	G	H	I	J	K	L	M
3235	CVE-2017-5972	HIGH	High	The TCP stack in the Linux kernel 3.x does not properly implement a SYN cookie protection mechanism for the case of a fast network connection, which allows remote attackers to cause a denial of service (CPU consumption) by sending many TCP SYN packets, as demonstrated by an attack against the kernel-3.10.0 package in CentOS Linux 7.	linux	Unchanged	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3379
3236	CVE-2017-5970	MEDIUM	High	The ipv4_pktinfo_prepare function in net/ipv4/ip_sockglue.c in the Linux kernel through 4.9.9 allows attackers to cause a denial of service (system crash) via (1) an application that makes crafted system calls or possibly (2) IPv4 traffic with invalid IP options.	linux	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3395
3237	CVE-2017-5969	LOW	Medium	libxml2 2.9.4, when used in recover mode, allows remote attackers to cause a denial of service (NULL pointer dereference) via a crafted XML document. NOTE: The maintainer states "I would disagree of a CVE with the Recover parsing option which should only be used for manual recovery at least for XML parser."	libxmi2	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4386
3238	CVE-2017-5967	LOW	Medium	The time subsystem in the Linux kernel through 4.9.9, when CONFIG_TIMER_STATS is enabled, allows local users to discover real PID values (as distinguished from PID values inside a PID namespace) by reading the /proc/timer_list file, related to the print_timer function in kernel/time/timer_list.c and the __timer_stats_timer_set_start_info function in kernel/time/timer.c.	linux	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3408
3239	CVE-2017-5953	HIGH	Critical	vim before patch 8.0.0322 does not properly validate values for tree length when handling a spell file, which may result in an integer overflow at a memory allocation site and a resultant buffer overflow.	vim	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3393
3240	CVE-2017-5951	MEDIUM	Medium	The mem_get_bits_rectangle function in base/gdevmem.c in Artifex Software, Inc. Ghostscript 9.20 allows remote attackers to cause a denial of service (NULL pointer dereference and application crash) via a crafted file.	ghostscript	Unchanged	8.0.0.18	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3932
3241	CVE-2017-5950	MEDIUM	Medium	The SingleDocParser::HandleNode function in yaml-cpp (aka LibYaml-C++) 0.5.3 allows remote attackers to cause a denial of service (stack consumption and application crash) via a crafted YAML file.	libyaml	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3878
3242	CVE-2017-5946	HIGH	Critical	The Zip::File component in the rubyzip gem before 1.2.1 for Ruby has a directory traversal vulnerability. If a site allows uploading of .zip files, an attacker can upload a malicious file that uses ../ pathname substrings to write arbitrary files to the filesystem.	ruby	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3539
3243	CVE-2017-5932	MEDIUM	High	The path autocompletion feature in Bash 4.4 allows local users to gain privileges via a crafted filename starting with a (double quote) character and a command substitution metacharacter.	bash	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3753
3244	CVE-2017-5931	HIGH	High	Integer overflow in hw/virtio/virtio-crypto.c in QEMU (aka Quick Emulator) allows local guest OS privileged users to cause a denial of service (QEMU process crash) or possibly execute arbitrary code on the host via a crafted virtio-crypto request, which triggers a heap-based buffer overflow.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3790
3245	CVE-2017-5898	LOW	Medium	Integer overflow in the emulated_apdu_from_guest function in usb/dev-smartcard-reader.c in Quick Emulator (Qemu), when built with the CCID Card device emulator support, allows local users to cause a denial of service (application crash) via a large Application Protocol Data Units (APDU) unit.	qemu	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3715
3246	CVE-2017-5897	HIGH	Critical	The ip6gre_err function in net/ipv6/ip6_gre.c in the Linux kernel allows remote attackers to have unspecified impact via vectors involving GRE flags in an IPv6 packet, which trigger an out-of-bounds access.	linux	Unchanged	8.0.0.16	9.0.0.5	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3752
3247	CVE-2017-5857	MEDIUM	Medium	Memory leak in the virgl_cmd_resource_unref function in hw/display/virtio-gpu-3d.c in QEMU (aka Quick Emulator) allows local guest OS users to cause a denial of service (host memory consumption) via a large number of VIRTIO_GPU_CMD_RESOURCE_UNREF commands sent without detaching the backing storage beforehand.	qemu	Unchanged	Not vulnerable	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3824
3248	CVE-2017-5856	MEDIUM	Medium	Memory leak in the megasas_handle_dcmd function in hw/scsi/megasas.c in QEMU (aka Quick Emulator) allows local guest OS privileged users to cause a denial of service (host memory consumption) via MegaRAID Firmware Interface (MFI) commands with the sglist size set to a value over 2 Gb.	qemu	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3722
3249	CVE-2017-5848	MEDIUM	High	The gst_ps_demux_parse_psm function in gst/mpegdemux/gstmpegdemux.c in gst-plugins-bad in GStreamer allows remote attackers to cause a denial of service (invalid memory read and crash) via vectors involving PSM parsing.	gstreamer	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3417
3250	CVE-2017-5847	MEDIUM	High	The gst_asf_demux_process_ext_content_desc function in gst/asfdemux/gstasfdemux.c in gst-plugins-ugly in GStreamer allows remote attackers to cause a denial of service (out-of-bounds heap read) via vectors involving extended content descriptors.	gstreamer	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3399
3251	CVE-2017-5846	MEDIUM	Medium	The gst_asf_demux_process_ext_stream_pro ps function in gst/asfdemux/gstasfdemux.c in gst-plugins-ugly in GStreamer before 1.10.3 allows remote attackers to cause a denial of service (invalid memory read and crash) via vectors related to the number of languages in a video file.	gstreamer	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3397
3252	CVE-2017-5845	MEDIUM	High	The gst_avi_demux_parse_ncdt function in gst/avi/gstavidemux.c in gst-plugins-good in GStreamer before 1.10.3 allows remote attackers to cause a denial of service (invalid memory read and crash) via a ncdt sub-tag that goes behind the surrounding tag.	gstreamer	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3420

	A	B	C	D	E	F	G	H	I	J	K	L	M
3253	CVE-2017-5844	MEDIUM	Medium	The gst_riff_create_audio_caps function in gst-libs/gst/riff/riff-media.c in gst-plugins-base in GStreamer before 1.10.3 allows remote attackers to cause a denial of service (floating point exception and crash) via a crafted ASF file.	gstreamer	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3396
3254	CVE-2017-5843	MEDIUM	High	Multiple use-after-free vulnerabilities in the (1) gst_mini_object_unref, (2) gst_tag_list_unref, and (3) gst_mxf_demux_update_essence_tracks functions in GStreamer before 1.10.3 allow remote attackers to cause a denial of service (crash) via vectors involving stream tags, as demonstrated by 02785736.mxf.	gstreamer	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3384
3255	CVE-2017-5842	MEDIUM	Medium	The html_context_handle_element function in gst/subparse/samiparse.c in gst-plugins-base in GStreamer before 1.10.3 allows remote attackers to cause a denial of service (out-of-bounds write) via a crafted SMI file, as demonstrated by OneNote_Manager.smi.	gstreamer	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3416
3256	CVE-2017-5841	MEDIUM	High	The gst_avi_demux_parse_ncdt function in gst/avi/gstavidemux.c in gst-plugins-good in GStreamer before 1.10.3 allows remote attackers to cause a denial of service (out-of-bounds heap read) via vectors involving ncdt tags.	gstreamer	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3382
3257	CVE-2017-5840	MEDIUM	High	The qtdemux_parse_samples function in gst/isomp4/qtdemux.c in gst-plugins-good in GStreamer before 1.10.3 allows remote attackers to cause a denial of service (out-of-bounds heap read) via vectors involving the current stts index.	gstreamer	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3398
3258	CVE-2017-5839	MEDIUM	High	The gst_riff_create_audio_caps function in gst-libs/gst/riff/riff-media.c in gst-plugins-base in GStreamer before 1.10.3 does not properly limit recursion, which allows remote attackers to cause a denial of service (stack overflow and crash) via vectors involving nested WAVEFORMATEX.	gstreamer	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3390
3259	CVE-2017-5838	MEDIUM	High	The gst_date_time_new_from_iso8601_string function in gst/gstdatetime.c in GStreamer before 1.10.3 allows remote attackers to cause a denial of service (out-of-bounds heap read) via a malformed datetime string.	gstreamer	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3402
3260	CVE-2017-5837	MEDIUM	Medium	The gst_riff_create_audio_caps function in gst-libs/gst/riff/riff-media.c in gst-plugins-base in GStreamer before 1.10.3 allows remote attackers to cause a denial of service (floating point exception and crash) via a crafted video file.	gstreamer	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3425
3261	CVE-2017-5836	MEDIUM	High	The plist_free_data function in plist.c in libplist allows attackers to cause a denial of service (crash) via vectors involving an integer node that is treated as a PLIST_KEY and then triggers an invalid free.	libplist	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3562
3262	CVE-2017-5835	MEDIUM	High	libplist allows attackers to cause a denial of service (large memory allocation and crash) via vectors involving an offset size of zero.	libplist	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3524
3263	CVE-2017-5834	MEDIUM	Medium	The parse_dict_node function in bplist.c in libplist allows attackers to cause a denial of service (out-of-bounds heap read and crash) via a crafted file.	libplist	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3575
3264	CVE-2017-5754	MEDIUM	Medium	Systems with microprocessors utilizing speculative execution and indirect branch prediction may allow unauthorized disclosure of information to an attacker with local user access via a side-channel analysis of the data cache. (Spectre / Meltdown)	linux	Unchanged	8.0.0.26	9.0.0.20	10.17.41.14	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2987
3265	CVE-2017-5753	MEDIUM	Medium	Systems with microprocessors utilizing speculative execution and branch prediction may allow unauthorized disclosure of information to an attacker with local user access via a side-channel analysis. (Spectre / Meltdown)	linux	Unchanged	8.0.0.29	9.0.0.18	10.17.41.14	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2986
3266	CVE-2017-5715	MEDIUM	Medium	Systems with microprocessors utilizing speculative execution and indirect branch prediction may allow unauthorized disclosure of information to an attacker with local user access via a side-channel analysis. (Spectre / Meltdown)	linux	Unchanged	8.0.0.29	9.0.0.18	10.17.41.14	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2989
3267	CVE-2017-5669	MEDIUM	High	The do_shmat function in ipc/shm.c in the Linux kernel through 4.9.12 does not restrict the address calculated by a certain rounding operation, which allows local users to map page zero, and consequently bypass a protection mechanism that exists for the mmap system call, by making crafted shmget and shmat system calls in a privileged context.	linux	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3400
3268	CVE-2017-5667	LOW	Medium	The sdhci_sdma_transfer_multi_blocks function in hw/sd/sdhci.c in QEMU (aka Quick Emulator) allows local guest OS privileged users to cause a denial of service (out-of-bounds heap access and crash) or execute arbitrary code on the QEMU host via vectors involving the data transfer length.	qemu	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3785
3269	CVE-2017-5645	HIGH	Critical	In Apache Log4j 2.x before 2.8.2, when using the TCP socket server or UDP socket server to receive serialized log events from another application, a specially crafted binary payload can be sent that, when deserialized, can execute arbitrary code.	log4j1.2	Unchanged	8.0.0.33	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-12023
3270	CVE-2017-5618	HIGH	High	GNU screen before 4.5.1 allows local users to modify arbitrary files and consequently gain root privileges by leveraging improper checking of logfile permissions.	screen	Unchanged	8.0.0.18	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3657
3271	CVE-2017-5601	MEDIUM	High	An error in the lha_read_file_header_1() function (archive_read_support_format_lha.c) in libarchive 3.2.2 allows remote attackers to trigger an out-of-bounds read memory access and subsequently cause a crash via a specially crafted archive.	libarchive	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3220
3272	CVE-2017-5597	MEDIUM	High	In Wireshark 2.2.0 to 2.2.3 and 2.0.0 to 2.0.9, the DHCPv6 dissector could go into a large loop, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-dhcpv6.c by changing a data type to avoid an integer overflow.	wireshark	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3244

	A	B	C	D	E	F	G	H	I	J	K	L	M
3273	CVE-2017-5596	MEDIUM	High	In Wireshark 2.2.0 to 2.2.3 and 2.0.0 to 2.0.9, the ASTERIX dissector could go into an infinite loop, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-asterix.c by changing a data type to avoid an integer overflow.CWE-835: Loop with Unreachable Exit Condition ('Infinite Loop')	wireshark	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3157
3274	CVE-2017-5581	MEDIUM	Critical	Buffer overflow in the ModifiablePixelBuffer::fillRect function in TigerVNC before 1.7.1 allows remote servers to execute arbitrary code via an RRE message with subrectangle outside framebuffer boundaries.	tigervnc	Unchanged	8.0.0.16	9.0.0.5	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3560
3275	CVE-2017-5579	MEDIUM	Medium	Memory leak in the serial_exit_core function in hw/char/serial.c in QEMU (aka Quick Emulator) allows local guest OS privileged users to cause a denial of service (host memory consumption and QEMU process crash) via a large number of device unplug operations.	qemu	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3733
3276	CVE-2017-5578	MEDIUM	Medium	Memory leak in the virtio_gpu_resource_attach_backing function in hw/display/virtio-gpu.c in QEMU (aka Quick Emulator) allows local guest OS users to cause a denial of service (host memory consumption) via a large number of VIRTIO_GPU_CMD_RESOURCE_ATTACH_BACKING commands.	qemu	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3750
3277	CVE-2017-5577	MEDIUM	Medium	The vc4_get_bcl function in drivers/gpu/drm/vc4/vc4_gem.c in the VideoCore DRM driver in the Linux kernel before 4.9.7 does not set an errno value upon certain overflow detections, which allows local users to cause a denial of service (incorrect pointer dereference and OOPS) via inconsistent size values in a VC4_SUBMIT_CL ioctl call.	linux	Unchanged	Not vulnerable	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3208
3278	CVE-2017-5576	HIGH	High	Integer overflow in the vc4_get_bcl function in drivers/gpu/drm/vc4/vc4_gem.c in the VideoCore DRM driver in the Linux kernel before 4.9.7 allows local users to cause a denial of service or possibly have unspecified other impact via a crafted size value in a VC4_SUBMIT_CL ioctl call.	linux	Unchanged	Not vulnerable	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3273
3279	CVE-2017-5563	MEDIUM	High	LibTIFF version 4.0.7 is vulnerable to a heap-based buffer over-read in tif_lzw.c resulting in DoS or code execution via a crafted bmp image to tools/bmp2tiff.	libtiff	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3256
3280	CVE-2017-5552	MEDIUM	Medium	Memory leak in the virgl_resource_attach_backing function in hw/display/virtio-gpu-3d.c in QEMU (aka Quick Emulator) allows local guest OS users to cause a denial of service (host memory consumption) via a large number of VIRTIO_GPU_CMD_RESOURCE_ATTACH_BACKING commands.	qemu	Unchanged	Not vulnerable	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3806
3281	CVE-2017-5551	LOW	Medium	The simple_set_acl function in fs/posix_acl.c in the Linux kernel before 4.9.6 preserves the setgid bit during a setxattr call involving a tmpfs filesystem, which allows local users to gain group privileges by leveraging the existence of a setgid program with restrictions on execute permissions. NOTE: this vulnerability exists because of an incomplete fix for CVE-2016-7097.	linux	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3240
3282	CVE-2017-5550	LOW	Medium	Off-by-one error in the pipe_advance function in lib/iov_iter.c in the Linux kernel before 4.9.5 allows local users to obtain sensitive information from uninitialized heap-memory locations in opportunistic circumstances by reading from a pipe after an incorrect buffer-release decision.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3295
3283	CVE-2017-5549	LOW	Medium	The klsi_105_get_line_state function in drivers/usb/serial/kl5kusb105.c in the Linux kernel before 4.9.5 places uninitialized heap-memory contents into a log entry upon a failure to read the line status, which allows local users to obtain sensitive information by reading the log.	linux	Unchanged	8.0.0.15	9.0.0.3	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3180
3284	CVE-2017-5548	HIGH	High	drivers/net/ieee802154/atusb.c in the Linux kernel 4.9.x before 4.9.6 interacts incorrectly with the CONFIG_VMAP_STACK option, which allows local users to cause a denial of service (system crash or memory corruption) or possibly have unspecified other impact by leveraging use of more than one virtual page for a DMA scatterlist.	linux	Unchanged	Not vulnerable	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3246
3285	CVE-2017-5547	HIGH	High	drivers/hid/hid-corsair.c in the Linux kernel 4.9.x before 4.9.6 interacts incorrectly with the CONFIG_VMAP_STACK option, which allows local users to cause a denial of service (system crash or memory corruption) or possibly have unspecified other impact by leveraging use of more than one virtual page for a DMA scatterlist.	linux	Unchanged	Not vulnerable	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3219
3286	CVE-2017-5546	HIGH	High	The freelist-randomization feature in mm/slab.c in the Linux kernel 4.8.x and 4.9.x before 4.9.5 allows local users to cause a denial of service (duplicate freelist entries and system crash) or possibly have unspecified other impact in opportunistic circumstances by leveraging the selection of a large value for a random number.	linux	Unchanged	Not vulnerable	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3297
3287	CVE-2017-5545	MEDIUM	Critical	The main function in plistutil.c in libimobiledevice libplist through 1.12 allows attackers to obtain sensitive information from process memory or cause a denial of service (buffer over-read) via Apple Property List data that is too short.	libplist	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3230
3288	CVE-2017-5526	MEDIUM	Medium	Memory leak in hw/audio/es1370.c in QEMU (aka Quick Emulator) allows local guest OS privileged users to cause a denial of service (host memory consumption and QEMU process crash) via a large number of device unplug operations.	qemu	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3672
3289	CVE-2017-5525	MEDIUM	Medium	Memory leak in hw/audio/ac97.c in QEMU (aka Quick Emulator) allows local guest OS privileged users to cause a denial of service (host memory consumption and QEMU process crash) via a large number of device unplug operations.	qemu	Unchanged	8.0.0.16	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3821

	A	B	C	D	E	F	G	H	I	J	K	L	M
3290	CVE-2017-5511	HIGH	Critical	coders/psd.c in ImageMagick allows remote attackers to have unspecified impact by leveraging an improper cast, which triggers a heap-based buffer overflow.	imagemagick	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3762
3291	CVE-2017-5510	MEDIUM	High	coders/psd.c in ImageMagick allows remote attackers to have unspecified impact via a crafted PSD file, which triggers an out-of-bounds write.	imagemagick	Unchanged	8.0.0.28	9.0.0.19	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3647
3292	CVE-2017-5509	MEDIUM	High	coders/psd.c in ImageMagick allows remote attackers to have unspecified impact via a crafted PSD file, which triggers an out-of-bounds write.	imagemagick	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3734
3293	CVE-2017-5508	MEDIUM	Medium	Heap-based buffer overflow in the PushQuantumPixel function in ImageMagick before 6.9.7-3 and 7.x before 7.0.4-3 allows remote attackers to cause a denial of service (application crash) via a crafted TIFF file.	imagemagick	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3823
3294	CVE-2017-5507	HIGH	High	Memory leak in coders/mpc.c in ImageMagick before 6.9.7-4 and 7.x before 7.0.4-4 allows remote attackers to cause a denial of service (memory consumption) via vectors involving a pixel cache.	imagemagick	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3819
3295	CVE-2017-5506	MEDIUM	High	Double free vulnerability in magick/profile.c in ImageMagick allows remote attackers to have unspecified impact via a crafted file.	imagemagick	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3694
3296	CVE-2017-5505	MEDIUM	Medium	The jas_matrix_asl function in jas_seq.c in JasPer 1.900.27 allows remote attackers to cause a denial of service (invalid memory read and crash) via a crafted image.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3696
3297	CVE-2017-5504	MEDIUM	Medium	The jpc_undo_roi function in libjasper/jpc/jpc_dec.c in JasPer 1.900.27 allows remote attackers to cause a denial of service (invalid memory read and crash) via a crafted image.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3583
3298	CVE-2017-5503	MEDIUM	Medium	The dec_clnpass function in libjasper/jpc/jpc_t1dec.c in JasPer 1.900.27 allows remote attackers to cause a denial of service (invalid memory write and crash) or possibly have unspecified other impact via a crafted image.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3535
3299	CVE-2017-5502	MEDIUM	Medium	libjasper/jp2/jp2_dec.c in JasPer 1.900.17 allows remote attackers to cause a denial of service (crash) via vectors involving left shift of a negative value.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3513
3300	CVE-2017-5501	MEDIUM	Medium	Integer overflow in libjasper/jpc/jpc_tsfb.c in JasPer 1.900.17 allows remote attackers to cause a denial of service (crash) via a crafted file.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3540
3301	CVE-2017-5500	MEDIUM	Medium	libjasper/jpc/jpc_dec.c in JasPer 1.900.17 allows remote attackers to cause a denial of service (crash) via vectors involving left shift of a negative value.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3550
3302	CVE-2017-5499	MEDIUM	Medium	Integer overflow in libjasper/jpc/jpc_dec.c in JasPer 1.900.17 allows remote attackers to cause a denial of service (crash) via a crafted file.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3543
3303	CVE-2017-5498	MEDIUM	Medium	libjasper/include/jasper/jas_math.h in JasPer 1.900.17 allows remote attackers to cause a denial of service (crash) via vectors involving left shift of a negative value.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3546
3304	CVE-2017-5495	HIGH	High	All versions of Quagga, 0.93 through 1.1.0, are vulnerable to an unbounded memory allocation in the telnet 'vty' CLI, leading to a Denial-of-Service of Quagga daemons, or even the entire host. When Quagga daemons are configured with their telnet CLI enabled, anyone who can connect to the TCP ports can trigger this vulnerability, prior to authentication. Most distributions restrict the Quagga telnet interface to local access only by default. The Quagga telnet interface 'vty' input buffer grows automatically, without bound, so long as a newline is not entered. This allows an attacker to cause the Quagga daemon to allocate unbounded memory by sending very long strings without a newline. Eventually the daemon is terminated by the system, or the system itself runs out of memory. This is fixed in Quagga 1.1.1 and Free Range Routing (FRR) Protocol Suite 2017-01-10.	quagga	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3215
3305	CVE-2017-5486	HIGH	Critical	The ISO CLNS parser in tcpdump before 4.9.0 has a buffer overflow in print-isoclns.c:clnp_print().	tcpdump	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3201
3306	CVE-2017-5485	HIGH	Critical	The ISO CLNS parser in tcpdump before 4.9.0 has a buffer overflow in addrtoname.c:lookup_nsap().	tcpdump	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3287
3307	CVE-2017-5484	HIGH	Critical	The ATM parser in tcpdump before 4.9.0 has a buffer overflow in print-atm.c:sig_print().	tcpdump	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3209
3308	CVE-2017-5483	HIGH	Critical	The SNMP parser in tcpdump before 4.9.0 has a buffer overflow in print-snmp.c:asn1_parse().	tcpdump	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3289
3309	CVE-2017-5482	HIGH	Critical	The Q.933 parser in tcpdump before 4.9.0 has a buffer overflow in print-fr.c:q933_print(), a different vulnerability than CVE-2016-8575.	tcpdump	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3294
3310	CVE-2017-5473	MEDIUM	High	Cross-site request forgery (CSRF) vulnerability in ntopng through 2.4 allows remote attackers to hijack the authentication of arbitrary users, as demonstrated by admin/add_user.lua, admin/change_user_prefs.lua, admin/delete_user.lua, and admin/password_reset.lua.	ntop	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-5611
3311	CVE-2017-5462	MEDIUM	MEDIUM	A flaw in DRBG number generation within the Network Security Services (NSS) library where the internal state V does not correctly carry bits over. The NSS library has been updated to fix this issue to address this issue and Firefox ESR 52.1 has been updated with NSS version 3.28.4. This vulnerability affects Thunderbird < 52.1, Firefox ESR < 45.9, Firefox ESR < 52.1, and Firefox < 53.	nss	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4107
3312	CVE-2017-5461	HIGH	Critical	Mozilla Network Security Services (NSS) before 3.21.4, 3.22.x through 3.28.x before 3.28.4, 3.29.x before 3.29.5, and 3.30.x before 3.30.1 allows remote attackers to cause a denial of service (out-of-bounds write) or possibly have unspecified other impact by leveraging incorrect base64 operations.	nss	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4232
3313	CVE-2017-5357	MEDIUM	High	regex.c in GNU ed before 1.14.1 allows attackers to cause a denial of service (crash) via a malformed command, which triggers an invalid free.	ed	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3431

3328	CVE-2017-5196	MEDIUM	High	Irssi 0.8.18 before 0.8.21 allows remote attackers to cause a denial of service (out-of-bounds read and crash) via vectors involving strings that are not UTF8.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3529
3329	CVE-2017-5195	MEDIUM	High	Irssi 0.8.17 before 0.8.21 allows remote attackers to cause a denial of service (out-of-bounds read and crash) via a crafted ANSI x8 color code.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3573
3330	CVE-2017-5194	MEDIUM	High	Use-after-free vulnerability in Irssi before 0.8.21 allows remote attackers to cause a denial of service (crash) via an invalid nick message.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3578
3331	CVE-2017-5193	MEDIUM	High	The nickcmp function in Irssi before 0.8.21 allows remote attackers to cause a denial of service (NULL pointer dereference and crash) via a message without a nick.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3498
3332	CVE-2017-5130	MEDIUM	High	An integer overflow in xmlmemory.c in libxml2 before 2.9.5, as used in Google Chrome prior to 62.0.3202.62 and other products, allowed a remote attacker to potentially exploit heap corruption via a crafted XML file.	libxml2	Unchanged	8.0.0.26	9.0.0.15	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3312
3333	CVE-2017-5123			A flaw was found in the upstream version of the kernels implementation of waitid systemcall. This flaw was the removal of validation of the target location where the kernel would copy the results. Previously it would implement a check to restrict the results to be copied to a valid userspace address, a new patch had inadvertently allowed copying to kernel addresses. An attacker could use this flaw to corrupt memory, panic the machine or possibly allow for arbitary memory writes.	linux	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4205
3334	CVE-2017-5029	MEDIUM	High	The xsltAddTextString function in transform.c in libxslt 1.1.29, as used in Blink in Google Chrome prior to 57.0.2987.98 for Mac, Windows, and Linux and 57.0.2987.108 for Android, lacked a check for integer overflow during a size calculation, which allowed a remote attacker to perform an out of bounds memory write via a crafted HTML page.	libxslt	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4045

	A	B	C	D	E	F	G	H	I	J	K	L	M
3335	CVE-2017-3738	MEDIUM	Medium	There is an overflow bug in the AVX2 Montgomery multiplication procedure used in exponentiation with 1024-bit moduli. No EC algorithms are affected. Analysis suggests that attacks against RSA and DSA as a result of this defect would be very difficult to perform and are not believed likely. Attacks against DH1024 are considered just feasible, because most of the work necessary to deduce information about a private key may be performed offline. The amount of resources required for such an attack would be significant. However, for an attack on TLS to be meaningful, the server would have to share the DH1024 private key among multiple clients, which is no longer an option since CVE-2016-0701. This only affects processors that support the AVX2 but not ADX extensions like Intel Haswell (4th generation). Note: The impact from this issue is similar to CVE-2017-3736, CVE-2017-3732 and CVE-2015-3193. OpenSSL version 1.0.2-1.0.2m and 1.1.0-1.1.0g are affected. Fixed in OpenSSL 1.0.2n. Due to the low severity of this issue we are not issuing a new release of OpenSSL 1.1.0 at this time. The fix will be included in OpenSSL 1.1.0h when it becomes available. The fix is also available in commit e502cc86d in the OpenSSL git repository.	openssl	Unchanged	8.0.0.24	9.0.0.14	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2713
3336	CVE-2017-3737	MEDIUM	Medium	OpenSSL 1.0.2 (starting from version 1.0.2b) introduced an error state mechanism. The intent was that if a fatal error occurred during a handshake then OpenSSL would move into the error state and would immediately fail if you attempted to continue the handshake. This works as designed for the explicit handshake functions (SSL_do_handshake(), SSL_accept() and SSL_connect()), however due to a bug it does not work correctly if SSL_read() or SSL_write() is called directly. In that scenario, if the handshake fails then a fatal error will be returned in the initial function call. If SSL_read()/SSL_write() is subsequently called by the application for the same SSL object then it will succeed and the data is passed without being decrypted/encrypted directly from the SSL/TLS record layer. In order to exploit this issue an application bug would have to be present that resulted in a call to SSL_read()/SSL_write() being issued after having already received a fatal error. OpenSSL version 1.0.2b-1.0.2m are affected. Fixed in OpenSSL 1.0.2n. OpenSSL 1.1.0 is not affected.	openssl	Unchanged	8.0.0.24	9.0.0.14	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2712
3337	CVE-2017-3736	MEDIUM	Medium	There is a carry propagating bug in the x86_64 Montgomery squaring procedure in OpenSSL before 1.0.2m and 1.1.0 before 1.1.0g. No EC algorithms are affected. Analysis suggests that attacks against RSA and DSA as a result of this defect would be very difficult to perform and are not believed likely. Attacks against DH are considered just feasible (although very difficult) because most of the work necessary to deduce information about a private key may be performed offline. The amount of resources required for such an attack would be very significant and likely only accessible to a limited number of attackers. An attacker would additionally need online access to an unpatched system using the target private key in a scenario with persistent DH parameters and a private key that is shared between multiple clients. This only affects processors that support the BMI1, BMI2 and ADX extensions like Intel Broadwell (5th generation) and later or AMD Ryzen.	openssl	Unchanged	8.0.0.24	9.0.0.13	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2475
3338	CVE-2017-3735	MEDIUM	High	While parsing an IPAddressFamily extension in an X.509 certificate, it is possible to do a one-byte overread. This would result in an incorrect text display of the certificate. This bug has been present since 2006 and is present in all versions of OpenSSL since then.	openssl	Unchanged	8.0.0.22	9.0.0.11	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5186
3339	CVE-2017-3733	MEDIUM	High	During a renegotiation handshake if the Encrypt-Then-Mac (ETM) extension is negotiated where it was not in the original handshake (or vice-versa) then this can cause OpenSSL to crash (dependant on ciphersuite). Both clients and servers are affected.	openssl	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3590
3340	CVE-2017-3732	MEDIUM	Medium	There is a carry propagating bug in the x86_64 Montgomery squaring procedure. No EC algorithms are affected. Analysis suggests that attacks against RSA and DSA as a result of this defect would be very difficult to perform and are not believed likely. Attacks against DH are considered just feasible (although very difficult) because most of the work necessary to deduce information about a private key may be performed offline. The amount of resources required for such an attack would be very significant and likely only accessible to a limited number of attackers. An attacker would additionally need online access to an unpatched system using the target private key in a scenario with persistent DH parameters and a private key that is shared between multiple clients. For example this can occur by default in OpenSSL DHE based SSL/TLS ciphersuites.	openssl	Unchanged	8.0.0.14	9.0.0.3	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3128
3341	CVE-2017-3731	MEDIUM	High	If an SSL/TLS server or client is running on a 32-bit host, and a specific cipher is being used, then a truncated packet can cause that server or client to perform an out-of-bounds read, usually resulting in a crash.	openssl	Unchanged	8.0.0.14	9.0.0.3	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3127
3342	CVE-2017-3730	MEDIUM	High	If a malicious server supplies bad parameters for a DHE or ECDHE key exchange then this can result in the client attempting to dereference a NULL pointer leading to a client crash. This could be exploited in a Denial of Service Attack. resulting in a crash.	openssl	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3129

3422	CVE-2017-3244	MEDIUM	Medium	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: DML). Supported versions that are affected are 5.5.53 and earlier, 5.6.34 and earlier and 5.7.16 and earlier. Easily exploitable vulnerability allows low privileged attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS v3.0 Base Score 6.5 (Availability impacts).	mysql	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3191
3423	CVE-2017-3243	LOW	Medium	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: Charsets). Supported versions that are affected are 5.5.53 and earlier. Difficult to exploit vulnerability allows high privileged attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS v3.0 Base Score 4.4 (Availability impacts).	mysql	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3193
3424	CVE-2017-3241	MEDIUM	Critical	Vulnerability in the Java SE, Java SE Embedded, JRockit component of Oracle Java SE (subcomponent: RMI). Supported versions that are affected are Java SE: 6u131, 7u121 and 8u112; Java SE Embedded: 8u111; JRockit: R28.3.12. Difficult to exploit vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE, Java SE Embedded, JRockit. While the vulnerability is in Java SE, Java SE Embedded, JRockit, attacks may significantly impact additional products. Successful attacks of this vulnerability can result in takeover of Java SE, Java SE Embedded, JRockit. Note: This vulnerability can only be exploited by supplying data to APIs in the specified Component without using Untrusted Java Web Start applications or Untrusted Java applets, such as through a web service. CVSS v3.0 Base Score 9.0 (Confidentiality, Integrity and Availability impacts).	jdk&jre	Unchanged	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3318
3425	CVE-2017-3238	MEDIUM	Medium	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: Optimizer). Supported versions that are affected are 5.5.53 and earlier, 5.6.34 and earlier and 5.7.16 and earlier. Easily exploitable vulnerability allows low privileged attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS v3.0 Base Score 6.5 (Availability impacts).	mysql	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3190
3426	CVE-2017-3231	MEDIUM	Medium	Vulnerability in the Java SE, Java SE Embedded component of Oracle Java SE (subcomponent: Networking). Supported versions that are affected are Java SE: 6u131, 7u121 and 8u112; Java SE Embedded: 8u111. Easily exploitable vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE, Java SE Embedded. Successful attacks require human interaction from a person other than the attacker. Successful attacks of this vulnerability can result in unauthorized read access to a subset of Java SE, Java SE Embedded accessible data. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets, that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability does not apply to Java deployments, typically in servers, that load and run only trusted code (e.g., code installed by an administrator). CVSS v3.0 Base Score 4.3 (Confidentiality impacts).	jdk&jre	Unchanged	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3159

3427	CVE-2017-3226	MEDIUM	MEDIUM	Das U-Boot is a device bootloader that can read its configuration from an AES encrypted file. Devices that make use of Das U-Boot's AES-CBC encryption feature using environment encryption (i.e., setting the configuration parameter CONFIG_ENV_AES=y) read environment variables from disk as the encrypted disk image is processed. An attacker with physical access to the device can manipulate the encrypted environment data to include a crafted two-byte sequence which triggers an error in environment variable parsing. This error condition is improperly handled by Das U-Boot, resulting in an immediate process termination with a debugging message.	u-boot	Unchanged	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4395
3428	CVE-2017-3225	LOW	MEDIUM	Das U-Boot is a device bootloader that can read its configuration from an AES encrypted file. For devices utilizing this environment encryption mode, U-Boot's use of a zero initialization vector may allow attacks against the underlying cryptographic implementation and allow an attacker to decrypt the data. Das U-Boot's AES-CBC encryption feature uses a zero (0) initialization vector. This allows an attacker to perform dictionary attacks on encrypted data produced by Das U-Boot to learn information about the encrypted data.	u-boot	Unchanged	Won't Fix	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4430
3429	CVE-2017-3224	MEDIUM	HIGH	Open Shortest Path First (OSPF) protocol implementations may improperly determine Link State Advertisement (LSA) recency for LSAs with MaxSequenceNumber. According to RFC 2328 section 13.1, for two instances of the same LSA, recency is determined by first comparing sequence numbers, then checksums, and finally MaxAge. In a case where the sequence numbers are the same, the LSA with the larger checksum is considered more recent, and will not be flushed from the Link State Database (LSDB). Since the RFC does not explicitly state that the values of links carried by a LSA must be the same when prematurely aging a self-originating LSA with MaxSequenceNumber, it is possible in vulnerable OSPF implementations for an attacker to craft a LSA with MaxSequenceNumber and invalid links that will result in a larger checksum and thus a 'newer' LSA that will not be flushed from the LSDB. Propagation of the crafted LSA can result in the erasure or alteration of the routing tables of routers within the routing domain, creating a denial of service condition or the re-routing of traffic on the the network. CVE-2017-3224 has been reserved for Quagga and downstream implementations (SUSE, openSUSE, and Red Hat packages).	quagga	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4376
3430	CVE-2017-3169	HIGH	Critical	In Apache httpd 2.2.x before 2.2.33 and 2.4.x before 2.4.26, mod_ssl may dereference a NULL pointer when third-party modules call ap_hook_process_connection() during an HTTP request to an HTTPS port.	apache2	Unchanged	8.0.0.20	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4541

3441	CVE-2017-3136	MEDIUM	MEDIUM	A denial of service flaw was found in the way BIND handled query requests when using DNS64 with "break-dnssec yes" option. A remote attacker could use this flaw to make named exit unexpectedly with an assertion failure via a specially crafted DNS request. unexpectedly with an assertion failure via a specially crafted command.	bind	Unchanged	8.0.0.18	9.0.0.7	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4120
3442	CVE-2017-3135	MEDIUM	MEDIUM	Under some conditions when using both DNS64 and RPZ to rewrite query responses, query processing can resume in an inconsistent state leading to either an INSIST assertion failure or an attempt to read through a NULL pointer.	bind	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3164
3443	CVE-2017-2888	MEDIUM	High	An exploitable integer overflow vulnerability exists when creating a new RGB Surface in SDL 2.0.5. A specially crafted file can cause an integer overflow resulting in too little memory being allocated which can lead to a buffer overflow and potential code execution. An attacker can provide a specially crafted image file to trigger this vulnerability.	sdl	Unchanged	8.0.0.30	9.0.0.21	10.17.41.15	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5554
3444	CVE-2017-2887	MEDIUM	High	An exploitable buffer overflow vulnerability exists in the XCF property handling functionality of SDL_image 2.0.1. A specially crafted xcf file can cause a stack-based buffer overflow resulting in potential code execution. An attacker can provide a specially crafted XCF file to trigger this vulnerability.	libsdl2-image	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5585
3445	CVE-2017-2885	HIGH	CRITICAL	An exploitable stack based buffer overflow vulnerability exists in the GNOME libsoup 2.58. A specially crafted HTTP request can cause a stack overflow resulting in remote code execution. An attacker can send a special HTTP request to the vulnerable server to trigger this vulnerability.	libsoup	Unchanged	8.0.0.26	9.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3869
3446	CVE-2017-2870	Medium	High	An exploitable integer overflow vulnerability exists in the tiff_image_parse functionality of Gdk-Pixbuf 2.36.6 when compiled with Clang. A specially crafted tiff file can cause a heap-overflow resulting in remote code execution. An attacker can send a file or a URL to trigger this vulnerability.	gdk-pixbuf	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5222
3447	CVE-2017-2862	Medium	High	An exploitable heap overflow vulnerability exists in the gdk_pixbuf__jpeg_image_load_incrementf functionality of Gdk-Pixbuf 2.36.6. A specially crafted jpeg file can cause a heap overflow resulting in remote code execution. An attacker can send a file or url to trigger this vulnerability.	gdk-pixbuf	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5250
3448	CVE-2017-2825	MEDIUM	HIGH	In the trapper functionality of Zabbix Server 2.4.x, specifically crafted trapper packets can pass database logic checks, resulting in database writes. An attacker can set up a Man-in-the-Middle server to alter trapper requests made between an active Zabbix proxy and Server to trigger this vulnerability.	zabbix	Unchanged	Won't Fix	Vulnerable	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3803
3449	CVE-2017-2820	MEDIUM	High	An exploitable integer overflow vulnerability exists in the JPEG 2000 image parsing functionality of freedesktop.org Poppler 0.53.0. A specially crafted PDF file can lead to an integer overflow causing out of bounds memory overwrite on the heap resulting in potential arbitrary code execution. To trigger this vulnerability, a victim must open the malicious PDF in an application using this library.	poppler	Unchanged	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4655
3450	CVE-2017-2818	MEDIUM	High	An exploitable heap overflow vulnerability exists in the image rendering functionality of Poppler 0.53.0. A specifically crafted PDF can cause an overly large number of color components during image rendering, resulting in heap corruption. An attacker controlled PDF file can be used to trigger this vulnerability.	poppler	Unchanged	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4644
3451	CVE-2017-2814	MEDIUM	High	An exploitable heap overflow vulnerability exists in the image rendering functionality of Poppler 0.53.0. A specifically crafted pdf can cause an image resizing after allocation has already occurred, resulting in heap corruption which can lead to code execution. An attacker controlled PDF file can be used to trigger this vulnerability.	poppler	Unchanged	Won't Fix	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4663
3452	CVE-2017-2671	MEDIUM	Medium	The ping_unhash function in net/ipv4/ping.c in the Linux kernel through 4.10.8 is too late in obtaining a certain lock and consequently cannot ensure that disconnect function calls are safe, which allows local users to cause a denial of service (panic) by leveraging access to the protocol value of IPPROTO_ICMP in a socket system call.	linux	Unchanged	8.0.0.17	9.0.0.6	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3973
3453	CVE-2017-2669	MEDIUM	HIGH	Dovecot before version 2.2.29 is vulnerable to a denial of service. When 'dict' passdb and userdb were used for user authentication, the username sent by the IMAP/POP3 client was sent through var_expand() to perform %variable expansion. Sending specially crafted %variable fields could result in excessive memory usage causing the process to crash (and restart), or excessive CPU usage causing all authentications to hang.	dovecot	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4219
3454	CVE-2017-2659	Medium	HIGH	It was found that dropbear before version 2013.59 with GSSAPI leaks whether given username is valid or invalid. When an invalid username is given, the GSSAPI authentication failure was incorrectly counted towards the maximum allowed number of password attempts.	dropbear	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3752
3455	CVE-2017-2647	HIGH	High	The KEYS subsystem in the Linux kernel before 3.18 allows local users to gain privileges or cause a denial of service (NULL pointer dereference and system crash) via vectors involving a NULL value for a certain match field, related to the keyring_search_iterator function in keyring.c.	linux	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-3946
3456	CVE-2017-2640	HIGH	CRITICAL	An out-of-bounds write flaw was found in the way Pidgin before 2.12.0 processed XML content. A malicious remote server could potentially use this flaw to crash Pidgin or execute arbitrary code in the context of the pidgin process.	pidgin	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4433
3457	CVE-2017-2636	HIGH	High	Race condition in drivers/tty/n_hdlc.c in the Linux kernel through 4.10.1 allows local users to gain privileges or cause a denial of service (double free) by setting the HDLC line discipline.	linux	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3516

	A	B	C	D	E	F	G	H	I	J	K	L	M
3458	CVE-2017-2635	MEDIUM	MEDIUM	A NULL pointer dereference vulnerability was found in virStorageSourceUpdateBlockPhysicalSize when attempted to call on empty drives. Unprivileged local user can trigger this bug to crash libvirtd.	libvirt	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4368
3459	CVE-2017-2634	HIGH	HIGH	A flaw was found in the linux kernels implementation of DCCP protocol in which a an application making a DCCP connection over IPV6 could crash a remote (or local) system. When attempting to send a DCCP reset packet, the system will incorrectly create the packet header and while updating the SNMP counters for this condition crash the kernel. The remote system would need to have both an application running as a DCCP server and have an IPV6 address routable.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4275
3460	CVE-2017-2633	MEDIUM	MEDIUM	Quick Emulator(Qemu) built with the VNC display driver support is vulnerable to an out-of-bounds memory access issue. It could occur while refreshing the vnc display surface area in 'vnc_refresh_server_surface'	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4287
3461	CVE-2017-2630	MEDIUM	HIGH	Quick Emulator(Qemu) built with the Network Block Device(NBD) client support is vulnerable to a stack buffer overflow issue. It could occur while processing server's response to a 'NBD_OPT_LIST' request.	qemu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4212
3462	CVE-2017-2629	MEDIUM	MEDIUM	A coding mistake was found in TLS Certificate Status Request extension feature that asks for a fresh proof of the server's certificate's validity in the code that checks for a test success or failure. It ends up always thinking there's valid proof, even when there is none or if the server doesn't support the TLS extension in question. Contrary to how it used to function and contrary to how this feature is documented to work.	curl	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3388
3463	CVE-2017-2626	LOW	MEDIUM	It was discovered that libICE before 1.0.9-8 used a weak entropy to generate keys. A local attacker could potentially use this flaw for session hijacking using the information available from the process list.	libice	Unchanged	8.0.0.27	9.0.0.18	10.17.41.10	10.18.44.1	10.19.45.1	Not vulnerable	LIN10-4457
3464	CVE-2017-2625	LOW	MEDIUM	It was discovered that libXdmcp before 1.1.2 including used weak entropy to generate session keys. On a multi-user system using xdmcp, a local attacker could potentially use information available from the process list to brute force the key, allowing them to hijack other users' sessions.	libxdmcp	Unchanged	8.0.0.27	9.0.0.18	10.17.41.10	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4398
3465	CVE-2017-2624	LOW	HIGH	It was found that xorg-x11-server before 1.19.0 including uses memcmp() to check the received MIT cookie against a series of valid cookies. If the cookie is correct, it is allowed to attach to the Xorg session. Since most memcmp() implementations return after an invalid byte is seen, this causes a time difference between a valid and invalid byte, which could allow an efficient brute force attack.	xserver-xorg	Unchanged	8.0.0.27	9.0.0.18	Not vulnerable	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4438
3466	CVE-2017-2620	HIGH	CRITICAL	Quick emulator(Qemu) built with the Cirrus CLGD 54xx VGA Emulator support is vulnerable to an out-of-bounds access issue. It could occur while copying VGA data in cirrus_bitblt_cputovideo.	qemu	Unchanged	8.0.0.27	9.0.0.17	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4199
3467	CVE-2017-2619	MEDIUM	HIGH	Samba before versions 4.6.1, 4.5.7 and 4.4.11 are vulnerable to a malicious client using a symlink race to allow access to areas of the server file system not exported under the share definition.	samba	Unchanged	Vulnerable	9.0.0.21	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3505
3468	CVE-2017-2618	MEDIUM	MEDIUM	A flaw was found in the Linux kernels handling of clearing SELinux attributes on /proc/pid/attr files. An empty (null) write to this file can crash the system by causing the system to attempt to access unmapped kernel memory.	linux	Unchanged	8.0.0.28	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4182
3469	CVE-2017-2616	MEDIUM	MEDIUM	A race condition was found in util-linux before 2.32.1 in the way su handled the management of child processes. A local authenticated attacker could use this flaw to kill other processes with root privileges under specific conditions.	util-linux	Unchanged	8.0.0.27	9.0.0.18	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4369
3470	CVE-2017-2615	HIGH	CRITICAL	Quick emulator(Qemu) built with the Cirrus CLGD 54xx VGA Emulator support is vulnerable to an out-of-bounds access issue. It could occur while copying VGA data via bitblt copy in backward mode.	qemu	Unchanged	8.0.0.17	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3389
3471	CVE-2017-2596	MEDIUM	Medium	The nested_vmx_check_vmptr function in arch/x86/kvm/vmx.c in the Linux kernel through 4.9.8 improperly emulates the VMXON instruction, which allows KVM L1 guest OS users to cause a denial of service (host OS memory consumption) by leveraging the mishandling of page references.	linux	Unchanged	8.0.0.15	9.0.0.4	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3187
3472	CVE-2017-2595	MEDIUM	MEDIUM	It was found that the log file viewer in Red Hat JBoss Enterprise Application 6 and 7 allows arbitrary file read to authenticated user via path traversal.	wildfly	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-9517
3473	CVE-2017-2592	LOW	MEDIUM	python-oslo-middleware before versions 3.8.1, 3.19.1, 3.23.1 is vulnerable to an information disclosure. Software using the CatchError class could include sensitive values in a traceback's error message. System users could exploit this flaw to obtain sensitive information from OpenStack component error logs (for example, keystone tokens).	python-oslo-middleware	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3920
3474	CVE-2017-2584	LOW	High	arch/x86/kvm/emulate.c in the Linux kernel through 4.9.3 allows local users to obtain sensitive information from kernel memory or cause a denial of service (use-after-free) via a crafted application that leverages instruction emulation for fxrstor, fxsave, sgdt, and sidt.	linux	Unchanged	8.0.0.15	9.0.0.3	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3079
3475	CVE-2017-2583	MEDIUM	High	The load_segment_descriptor implementation in arch/x86/kvm/emulate.c in the Linux kernel before 4.9.5 improperly emulates a MOV SS, NULL selector instruction, which allows guest OS users to cause a denial of service (guest OS crash) or gain guest OS privileges via a crafted application.	linux	Unchanged	8.0.0.15	9.0.0.6	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-3197
3476	CVE-2017-18641	HIGH	HIGH	In LXC 2.0, many template scripts download code over cleartext HTTP, and omit a digital-signature check, before running it to bootstrap containers.	lxc	Unchanged	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1019-4042

	A	B	C	D	E	F	G	H	I	J	K	L	M
3477	CVE-2017-18635	Medium	MEDIUM	An XSS vulnerability was discovered in noVNC before 0.6.2 in which the remote VNC server could inject arbitrary HTML into the noVNC web page via the messages propagated to the status field, such as the VNC server name.	novnc	Unchanged	Investigate	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4979
3478	CVE-2017-18595	High	HIGH	An issue was discovered in the Linux kernel before 4.14.11. A double free may be caused by the function allocate_trace_buffer in the file kernel/trace/trace.c.	linux	Unchanged	8.0.0.31	9.0.0.24	10.17.41.18	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4839
3479	CVE-2017-18594	MEDIUM	HIGH	nse_libssh2.cc in Nmap 7.70 is subject to a denial of service condition due to a double free when an SSH connection fails, as demonstrated by a leading \n character to ssh-brute.nse or ssh-auth-methods.nse.	nmap	Unchanged	Not vulnerable	Not vulnerable	10.17.41.18	10.18.44.11	Not vulnerable	Not vulnerable	LIN1018-4806
3480	CVE-2017-18552	Medium	HIGH	An issue was discovered in net/rds/af_rds.c in the Linux kernel before 4.11. There is an out of bounds write and read in the function rds_recv_track_latency.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4713
3481	CVE-2017-18551	Medium	HIGH	An issue was discovered in drivers/i2c/i2c-core-smbus.c in the Linux kernel before 4.14.15. There is an out of bounds write in the function i2c_smbus_xfer_emulated.	linux	Unchanged	8.0.0.31	9.0.0.24	10.17.41.18	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4711
3482	CVE-2017-18550	Low	MEDIUM	An issue was discovered in drivers/scsi/aacraid/commctrl.c in the Linux kernel before 4.13. There is potential exposure of kernel stack memory because aac_get_hba_info does not initialize the hbainfo structure.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.19	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4710
3483	CVE-2017-18549	Low	MEDIUM	An issue was discovered in drivers/scsi/aacraid/commctrl.c in the Linux kernel before 4.13. There is potential exposure of kernel stack memory because aac_send_raw_srb does not initialize the reply structure.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.19	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4709
3484	CVE-2017-18509	High	HIGH	An issue was discovered in net/ipv6/ip6mr.c in the Linux kernel before 4.11. By setting a specific socket option, an attacker can control a pointer in kernel land and cause an inet_csk_listen_stop general protection fault, or potentially execute arbitrary code under certain circumstances. The issue can be triggered as root (e.g., inside a default LXC container or with the CAP_NET_ADMIN capability) or after namespace unsharing. This occurs because sk_type and protocol are not checked in the appropriate part of the ip6_mroute_* functions. NOTE: this affects Linux distributions that use 4.9.x longterm kernels before 4.9.187.	linux	Unchanged	8.0.0.31	9.0.0.24	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4660
3485	CVE-2017-18379	HIGH	CRITICAL	In the Linux kernel before 4.14, an out of boundary access happened in drivers/nvme/target/fc.c.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.18	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4545
3486	CVE-2017-18360	Medium	MEDIUM	In change_port_settings in drivers/usb/serial/io_ti.c in the Linux kernel before 4.11.3, local users could cause a denial of service by division-by-zero in the serial device layer by trying to set very high baud rates.	linux	Unchanged	8.0.0.30	9.0.0.21	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3529
3487	CVE-2017-18344	LOW	MEDIUM	The timer_create syscall implementation in kernel/time/posix-timers.c in the Linux kernel before 4.14.8 doesn't properly validate the sigevent->sigev_notify field, which leads to out-of-bounds access in the show_timer function (called when /proc/$PID/timers is read). This allows userspace applications to read arbitrary kernel memory (on a kernel built with CONFIG_POSIX_TIMERS and CONFIG_CHECKPOINT_RESTORE).	linux	Unchanged	8.0.0.27	9.0.0.18	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4450
3488	CVE-2017-18342	HIGH	CRITICAL	In PyYAML before 4.1, the yaml.load() API could execute arbitrary code. In other words, yaml.safe_load is not used.	python-pyyaml	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4220
3489	CVE-2017-18273	HIGH	MEDIUM	In ImageMagick 7.0.7-16 Q16 x86_64 2017-12-22, an infinite loop vulnerability was found in the function ReadTXTImage in coders/txt.c, which allows attackers to cause a denial of service (CPU exhaustion) via a crafted image file that is mishandled in a GetImageIndexInList call.	imagemagick	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4029
3490	CVE-2017-18272	MEDIUM	MEDIUM	In ImageMagick 7.0.7-16 Q16 x86_64 2017-12-25, there is a use-after-free in ReadOneMNGImage in coders/png.c, which allows attackers to cause a denial of service via a crafted MNG image file that is mishandled in an MngInfoDiscardObject call.	imagemagick	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4034
3491	CVE-2017-18271	HIGH	MEDIUM	In ImageMagick 7.0.7-16 Q16 x86_64 2017-12-22, an infinite loop vulnerability was found in the function ReadMIFFImage in coders/miff.c, which allows attackers to cause a denial of service (CPU exhaustion) via a crafted MIFF image file.	imagemagick	Unchanged	8.0.0.27	9.0.0.17	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-4056
3492	CVE-2017-18270	LOW	HIGH	In the Linux kernel before 4.13.5, a local user could create keyrings for other users via keyctl commands, setting unwanted defaults or causing a denial of service.	linux	Unchanged	8.0.0.30	9.0.0.20	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4051
3493	CVE-2017-18269	HIGH	CRITICAL	An SSE2-optimized memmove implementation for i386 in sysdeps/i386/i686/multiarch/memcpy-sse2-unaligned.S in the GNU C Library (aka glibc or libc6) 2.21 through 2.27 does not correctly perform the overlapping memory check if the source memory range spans the middle of the address space, resulting in corrupt data being produced by the copy operation. This may disclose information to context-dependent attackers, or result in a denial of service, or, possibly, code execution.	glibc	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-4036
3494	CVE-2017-18267	MEDIUM	MEDIUM	The FoFiType1C::cvtGlyph function in fofi/FoFiType1C.cc in Poppler through 0.64.0 allows remote attackers to cause a denial of service (infinite recursion) via a crafted PDF file, as demonstrated by pdftops.	poppler	Unchanged	Won't Fix	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3921
3495	CVE-2017-18266	MEDIUM	HIGH	The open_envvar function in xdg-open in xdg-utils before 1.1.3 does not validate strings before launching the program specified by the BROWSER environment variable, which might allow remote attackers to conduct argument-injection attacks via a crafted URL, as demonstrated by %s in this environment variable.	xdg-utils	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3938

	A	B	C	D	E	F	G	H	I	J	K	L	M
3496	CVE-2017-18264	HIGH	CRITICAL	An issue was discovered in libraries/common.inc.php in phpMyAdmin 4.0 before 4.0.10.20, 4.4.x, 4.6.x, and 4.7.0 prereleases. The restrictions caused by $cfg['Servers'][$i] ['AllowNoPassword'] = false are bypassed under certain PHP versions (e.g., version 5). This can allow the login of users who have no password set even if the administrator has set $cfg['Servers'] [$i]['AllowNoPassword'] to false (which is also the default). This occurs because some implementations of the PHP substr function return false when given '' as the first argument.	phpmyadmin	Unchanged	8.0.0.26	9.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3927
3497	CVE-2017-18261	MEDIUM	MEDIUM	The arch_timer_reg_read_stable macro in arch/arm64/include/asm/arch_timer.h in the Linux kernel before 4.13 allows local users to cause a denial of service (infinite recursion) by writing to a file under /sys/kernel/debug in certain circumstances, as demonstrated by a scenario involving debugfs, ftrace, PREEMPT_TRACER, and FUNCTION_GRAPH_TRACER.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3846
3498	CVE-2017-18258	MEDIUM	MEDIUM	The xz_head function in xzlib.c in libxml2 before 2.9.6 allows remote attackers to cause a denial of service (memory consumption) via a crafted LZMA file, because the decoder functionality does not restrict memory usage to what is required for a legitimate file.	libxml2	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3724
3499	CVE-2017-18257	MEDIUM	MEDIUM	The __get_data_block function in fs/f2fs/data.c in the Linux kernel before 4.11 allows local users to cause a denial of service (integer overflow and loop) via crafted use of the open and fallocate system calls with an FS_IOC_FIEMAP ioctl.	linux	Unchanged	Not vulnerable	9.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3740
3500	CVE-2017-18255	MEDIUM	HIGH	The perf_cpu_time_max_percent_handler function in kernel/events/core.c in the Linux kernel before 4.11 allows local users to cause a denial of service (integer overflow) or possibly have unspecified other impact via a large value, as demonstrated by an incorrect sample-rate calculation.	linux	Unchanged	8.0.0.26	9.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3657
3501	CVE-2017-18254	Medium	MEDIUM	An issue was discovered in ImageMagick 7.0.7. A memory leak vulnerability was found in the function WriteGIFImage in coders/gif.c, which allow remote attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.26	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3649
3502	CVE-2017-18253	Medium	MEDIUM	An issue was discovered in ImageMagick 7.0.7. A NULL pointer dereference vulnerability was found in the function LoadOpenCLDevices in MagickCore/opencl.c, which allows attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	Not vulnerable	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3646
3503	CVE-2017-18252	Medium	MEDIUM	An issue was discovered in ImageMagick 7.0.7. The MogrifyImageList function in MagickWand/mogrify.c allows attackers to cause a denial of service (assertion failure and application exit in ReplaceImageInList) via a crafted file.	imagemagick	Unchanged	8.0.0.26	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3647
3504	CVE-2017-18251	Medium	MEDIUM	An issue was discovered in ImageMagick 7.0.7. A memory leak vulnerability was found in the function ReadPCDImage in coders/pcd.c, which allow remote attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.26	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3648
3505	CVE-2017-18250	Medium	MEDIUM	An issue was discovered in ImageMagick 7.0.7. A NULL pointer dereference vulnerability was found in the function LogOpenCLBuildFailure in MagickCore/opencl.c, which allows attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	Not vulnerable	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3655
3506	CVE-2017-18249	MEDIUM	HIGH	The add_free_nid function in fs/f2fs/node.c in the Linux kernel before 4.12 does not properly track an allocated nid, which allows local users to cause a denial of service (race condition) or possibly have unspecified other impact via concurrent threads.	linux	Unchanged	8.0.0.27	9.0.0.17	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3663
3507	CVE-2017-18248	LOW	MEDIUM	The add_job function in scheduler/ipp.c in CUPS before 2.2.6, when D-Bus support is enabled, can be crashed by remote attackers by sending print jobs with an invalid username, related to a D-Bus notification.	cups	Unchanged	8.0.0.26	9.0.0.16	10.17.41.6	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3639
3508	CVE-2017-18247	MEDIUM	MEDIUM	The av_audio_fifo_size function in libavutil/audio_fifo.c in Libav 12.2 allows remote attackers to cause a denial of service (NULL pointer dereference) via a crafted media file.	libav	Unchanged	8.0.0.28	9.0.0.19	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	LIN10-3643
3509	CVE-2017-18246	MEDIUM	MEDIUM	The pcm_encode_frame function in libavcodec/pcm.c in Libav 12.2 allows remote attackers to cause a denial of service (heap-based buffer over-read) via a crafted media file.	libav	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3641
3510	CVE-2017-18245	MEDIUM	MEDIUM	The mpc8_probe function in libavformat/mpc8.c in Libav 12.2 allows remote attackers to cause a denial of service (heap-based buffer over-read) via a crafted audio file.	libav	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3675
3511	CVE-2017-18244	MEDIUM	MEDIUM	The stereo_processing function in libavcodec/aacps.c in Libav 12.2 allows remote attackers to cause a denial of service (out-of-bounds read) via a crafted aac file, related to ff_ps_apply.	libav	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3654
3512	CVE-2017-18243	MEDIUM	MEDIUM	The unpack_parse_unit function in libavcodec/dirac_parser.c in Libav 12.2 allows remote attackers to cause a denial of service (segmentation fault) via a crafted file.	libav	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3633
3513	CVE-2017-18242	MEDIUM	MEDIUM	The apply_dependent_coupling function in libavcodec/aacdec.c in Libav 12.2 allows remote attackers to cause a denial of service (out-of-bounds read) via a crafted aac file.	libav	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3669
3514	CVE-2017-18241	MEDIUM	MEDIUM	fs/f2fs/segment.c in the Linux kernel before 4.13 allows local users to cause a denial of service (NULL pointer dereference and panic) by using a noflush_merge option that triggers a NULL value for a flush_cmd_control data structure.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3666
3515	CVE-2017-18232	LOW	MEDIUM	The Serial Attached SCSI (SAS) implementation in the Linux kernel through 4.15.9 mishandles a mutex within libsas, which allows local users to cause a denial of service (deadlock) by triggering certain error-handling code.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3547

	A	B	C	D	E	F	G	H	I	J	K	L	M
3516	CVE-2017-18224	LOW	MEDIUM	In the Linux kernel before 4.15, fs/ocfs2/aops.c omits use of a semaphore and consequently has a race condition for access to the extent tree during read operations in DIRECT mode, which allows local users to cause a denial of service (BUG) by modifying a certain e_cpos field.	linux	Unchanged	Not vulnerable	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3510
3517	CVE-2017-18222	MEDIUM	HIGH	In the Linux kernel before 4.12, Hisilicon Network Subsystem (HNS) does not consider the ETH_SS_PRIV_FLAGS case when retrieving sset_count data, which allows local users to cause a denial of service (buffer overflow and memory corruption) or possibly have unspecified other impact, as demonstrated by incompatibility between hns_get_sset_count and ethtool_get_strings.	linux	Unchanged	Not vulnerable	9.0.0.17	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3539
3518	CVE-2017-18221	MEDIUM	MEDIUM	The __munlock_pagevec function in mm/mlock.c in the Linux kernel before 4.11.4 allows local users to cause a denial of service (NR_MLOCK accounting corruption) via crafted use of mlockall and munlockall system calls.	linux	Unchanged	8.0.0.26	9.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3542
3519	CVE-2017-18218	HIGH	HIGH	In drivers/net/ethernet/hisilicon/hns/hns_enet.c in the Linux kernel before 4.13, local users can cause a denial of service (use-after-free and BUG) or possibly have unspecified other impact by leveraging differences in skb handling between hns_nic_net_xmit_hw and hns_nic_net_xmit.	linux	Unchanged	Not vulnerable	9.0.0.17	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3567
3520	CVE-2017-18216	LOW	MEDIUM	In fs/ocfs2/cluster/nodemanager.c in the Linux kernel before 4.15, local users can cause a denial of service (NULL pointer dereference and BUG) because a required mutex is not used.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3535
3521	CVE-2017-18211	HIGH	CRITICAL	In ImageMagick 7.0.7, a NULL pointer dereference vulnerability was found in the function saveBinaryCLProgram in magick/opencl.c because a program-lookup result is not checked, related to CacheOpenCLKernel.	imagemagick	Unchanged	Not vulnerable	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3541
3522	CVE-2017-18210	HIGH	CRITICAL	In ImageMagick 7.0.7, a NULL pointer dereference vulnerability was found in the function BenchmarkOpenCLDevices in MagickCore/opencl.c because a memory allocation result is not checked.	imagemagick	Unchanged	Not vulnerable	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3519
3523	CVE-2017-18209	MEDIUM	HIGH	In the GetOpenCLCachedFilesDirectory function in magick/opencl.c in ImageMagick 7.0.7, a NULL pointer dereference vulnerability occurs because a memory allocation result is not checked, related to GetOpenCLCacheDirectory.	imagemagick	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3531
3524	CVE-2017-18208	MEDIUM	MEDIUM	The madvise_willneed function in mm/madvise.c in the Linux kernel before 4.14.4 allows local users to cause a denial of service (infinite loop) by triggering use of MADVISE_WILLNEED for a DAX mapping.	linux	Unchanged	8.0.0.26	9.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3516
3525	CVE-2017-18207	MEDIUM	MEDIUM	** DISPUTED ** The Wave_read._read_fmt_chunk function in Lib/wave.py in Python through 3.6.4 does not ensure a nonzero channel value, which allows attackers to cause a denial of service (divide-by-zero and exception) via a crafted wav format audio file. NOTE: the vendor disputes this issue because Python applications need to be prepared to handle a wide variety of exceptions.	python	Unchanged	Investigate	Investigate	10.17.41.19	10.18.44.14	Not vulnerable	Not vulnerable	LIN1019-3676
3526	CVE-2017-18206	HIGH	CRITICAL	In utils.c in zsh before 5.4, symlink expansion had a buffer overflow.	zsh	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3552
3527	CVE-2017-18205	MEDIUM	HIGH	In builtin.c in zsh before 5.4, when sh compatibility mode is used, there is a NULL pointer dereference during processing of the cd command with no argument if HOME is not set.	zsh	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3538
3528	CVE-2017-18204	LOW	MEDIUM	The ocfs2_setattr function in fs/ocfs2/file.c in the Linux kernel before 4.14.2 allows local users to cause a denial of service (deadlock) via DIO requests.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.6	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3536
3529	CVE-2017-18203	LOW	MEDIUM	The dm_get_from_kobject function in drivers/md/dm.c in the Linux kernel before 4.14.3 allow local users to cause a denial of service (BUG) by leveraging a race condition with __dm_destroy during creation and removal of DM devices.	linux	Unchanged	8.0.0.26	9.0.0.15	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3515
3530	CVE-2017-18202	HIGH	CRITICAL	The __oom_reap_task_mm function in mm/oom_kill.c in the Linux kernel before 4.14.4 mishandles gather operations, which allows attackers to cause a denial of service (TLB entry leak or use-after-free) or possibly have unspecified other impact by triggering a copy_to_user call within a certain time window.	linux	Unchanged	Not vulnerable	9.0.0.15	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3413
3531	CVE-2017-18201	HIGH	CRITICAL	An issue was discovered in GNU libcdio before 2.0.0. There is a double free in get_cdtext_generic() in lib/driver/_cdio_generic.c.	libcdio	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3403
3532	CVE-2017-18200	MEDIUM	MEDIUM	The f2fs implementation in the Linux kernel before 4.14 mishandles reference counts associated with f2fs_wait_discard_bios calls, which allows local users to cause a denial of service (BUG), as demonstrated by fstrim.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3362
3533	CVE-2017-18199	MEDIUM	MEDIUM	realloc_symlink in rock.c in GNU libcdio before 1.0.0 allows remote attackers to cause a denial of service (NULL Pointer Dereference) via a crafted iso file.	libcdio	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3426
3534	CVE-2017-18198	MEDIUM	HIGH	print_iso9660_recurse in iso-info.c in GNU libcdio before 1.0.0 allows remote attackers to cause a denial of service (heap-based buffer over-read) or possibly have unspecified other impact via a crafted iso file.	libcdio	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3415
3535	CVE-2017-18196	LOW	LOW	Leptonica 1.74.4 constructs unintended pathnames (containing duplicated path components) when operating on files in /tmp subdirectories, which might allow local users to bypass intended file restrictions by leveraging access to a directory located deeper within the /tmp directory tree, as demonstrated by /tmp/ANY/PATH/ANY/PATH/input.tif.	leptonica	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3422
3536	CVE-2017-18193	MEDIUM	Medium	fs/f2fs/extent_cache.c in the Linux kernel before 4.13 mishandles extent trees, which allows local users to cause a denial of service (BUG) via an application with multiple threads.	linux	Unchanged	Vulnerable	9.0.0.15	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3379

	A	B	C	D	E	F	G	H	I	J	K	L	M
3537	CVE-2017-18190	MEDIUM	HIGH	A localhost.localdomain whitelist entry in valid_host() in scheduler/client.c in CUPS before 2.2.2 allows remote attackers to execute arbitrary IPP commands by sending POST requests to the CUPS daemon in conjunction with DNS rebinding. The localhost.localdomain name is often resolved via a DNS server (neither the OS nor the web browser is responsible for ensuring that localhost.localdomain is 127.0.0.1).	cups	Unchanged	8.0.0.26	9.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3338
3538	CVE-2017-18189	MEDIUM	HIGH	In the startread function in xa.c in Sound eXchange (SoX) through 14.4.2, a corrupt header specifying zero channels triggers an infinite loop with a resultant NULL pointer dereference, which may allow a remote attacker to cause a denial-of-service.	sox	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3374
3539	CVE-2017-18187	HIGH	CRITICAL	In ARM mbed TLS before 2.7.0, there is a bounds-check bypass through an integer overflow in PSK identity parsing in the ssl_parse_client_psk_identity() function in library/ssl_srv.c.	mbedtls	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3373
3540	CVE-2017-18174	HIGH	CRITICAL	In the Linux kernel before 4.7, the amd_gpio_remove function in drivers/pinctrl/pinctrl-amd.c calls the pinctrl_unregister function, leading to a double free.	linux	Unchanged	8.0.0.26	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3435
3541	CVE-2017-18079	HIGH	High	drivers/input/serio/i8042.c in the Linux kernel before 4.12.4 allows attackers to cause a denial of service (NULL pointer dereference and system crash) or possibly have unspecified other impact because the port->exists value can change after it is validated.	linux	Unchanged	8.0.0.26	9.0.0.15	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3222
3542	CVE-2017-18078	MEDIUM	High	systemd-tmpfiles in systemd before 237 attempts to support ownership/permission changes on hardlinked files even if the fs.protected_hardlinks sysctl is turned off, which allows local users to bypass intended access restrictions via vectors involving a hard link to a file for which the user lacks write access, as demonstrated by changing the ownership of the /etc/passwd file.	systemd	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3206
3543	CVE-2017-18075	HIGH	High	crypto/pcrypt.c in the Linux kernel before 4.14.13 mishandles freeing instances, allowing a local user able to access the AF_ALG-based AEAD interface (CONFIG_CRYPTO_USER_API_AEAD) and pcrypt (CONFIG_CRYPTO_PCRYPT) to cause a denial of service (kfree of an incorrect pointer) or possibly have unspecified other impact by executing a crafted sequence of system calls.	linux	Unchanged	Not vulnerable	9.0.0.15	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3212
3544	CVE-2017-18043	Low	Medium	Integer overflow in the macro ROUND_UP (n, d) in Quick Emulator (Qemu) allows a user to cause a denial of service (Qemu process crash).	qemu	Unchanged	8.0.0.26	9.0.0.15	10.17.41.5	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3349
3545	CVE-2017-18030	LOW	Medium	The cirrus_invalidate_region function in hw/display/cirrus_vga.c in Qemu allows local OS guest privileged users to cause a denial of service (out-of-bounds array access and QEMU process crash) via vectors related to negative pitch.	qemu	Unchanged	8.0.0.25	9.0.0.15	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3220
3546	CVE-2017-18029	MEDIUM	Medium	In ImageMagick 7.0.6-10 Q16, a memory leak vulnerability was found in the function ReadMATImage in coders/mat.c, which allow remote attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3067
3547	CVE-2017-18028	HIGH	Medium	In ImageMagick 7.0.7-1 Q16, a memory exhaustion vulnerability was found in the function ReadTIFFImage in coders/tiff.c, which allow remote attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3059
3548	CVE-2017-18027	MEDIUM	Medium	In ImageMagick 7.0.7-1 Q16, a memory leak vulnerability was found in the function ReadMATImage in coders/mat.c, which allow remote attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3062
3549	CVE-2017-18022	MEDIUM	Medium	In ImageMagick 7.0.7-12 Q16, there are memory leaks in MontageImageCommand in MagickWand/montage.c.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3106
3550	CVE-2017-18018	LOW	Medium	In GNU Coreutils through 8.29, chown-core.c in chown and chgrp does not prevent replacement of a plain file with a symlink during use of the POSIX -R -L options, which allows local users to modify the ownership of arbitrary files by leveraging a race condition.	coreutils	Unchanged	8.0.0.30	Vulnerable	10.17.41.15	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3065
3551	CVE-2017-18017	HIGH	Critical	The tcpmss_mangle_packet function in net/netfilter/xt_TCPMSS.c in the Linux kernel before 4.11, and 4.9.x before 4.9.36, allows remote attackers to cause a denial of service (use-after-free and memory corruption) or possibly have unspecified other impact by leveraging the presence of xt_TCPMSS in an iptables action.	linux	Unchanged	8.0.0.25	9.0.0.14	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3077
3552	CVE-2017-18013	MEDIUM	Medium	In LibTIFF 4.0.9, there is a Null-Pointer Dereference in the tif_print.c TIFFPrintDirectory function, as demonstrated by a tiffinfo crash.	libtiff	Unchanged	8.0.0.25	9.0.0.14	10.17.41.4	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3056
3553	CVE-2017-18009	MEDIUM	High	In OpenCV 3.3.1, a heap-based buffer over-read exists in the function cv::HdrDecoder::checkSignature in modules/imgcodecs/src/grfmt_hdr.cpp.	opencv	Unchanged	Won't Fix	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3071
3554	CVE-2017-18008	MEDIUM	Medium	In ImageMagick 7.0.7-17 Q16, there is a Memory Leak in ReadPWPImage in coders/pwp.c.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3060
3555	CVE-2017-17997	MEDIUM	High	In Wireshark 2.2.11 and before, the MRDISC dissector misuses a NULL pointer. This was addressed in epan/dissectors/packet-mrdisc.c by validating an IPv4 address. This vulnerability is similar to CVE-2017-9343.	wireshark	Unchanged	8.0.0.28	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3080
3556	CVE-2017-17975	MEDIUM	Medium	Use-after-free in the usbtv_probe function in drivers/media/usb/usbtv/usbtv-core.c in the Linux kernel through 4.14.10 allows attackers to cause a denial of service (system crash) or possibly have unspecified other impact by triggering failure of audio registration, because a kfree of the usbtv data structure occurs during a usbtv_video_free call, but the usbtv_video_fail label's code attempts to both access and free this data structure.	linux	Unchanged	8.0.0.27	9.0.0.18	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3055
3557	CVE-2017-17973	MEDIUM	High	In LibTIFF 4.0.8, there is a heap-based use-after-free in the t2p_writeproc function in tiff2pdf.c.	libtiff	Unchanged	Vulnerable	Vulnerable	Vulnerable	Vulnerable	Not vulnerable	Vulnerable	LIN10-3089
3558	CVE-2017-17942	MEDIUM	High	In LibTIFF 4.0.9, there is a heap-based buffer over-read in the function PackBitsEncode in tif_packbits.c.	libtiff	Unchanged	Investigate	Investigate	Investigate	Investigate	Not vulnerable	Not vulnerable	LIN10-2942

	A	B	C	D	E	F	G	H	I	J	K	L	M
3559	CVE-2017-17935	MEDIUM	High	The File_read_line function in epan/wslua/wslua_file.c in Wireshark through 2.2.11 does not properly strip '\n' characters, which allows remote attackers to cause a denial of service (buffer underflow and application crash) via a crafted packet that triggers the attempted processing of an empty line.	wireshark	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	Won't Fix	Won't Fix	Won't Fix	LIN10-2925
3560	CVE-2017-17934	MEDIUM	Medium	ImageMagick 7.0.7-17 Q16 x86_64 has memory leaks in coders/msl.c, related to MSLPopImage and ProcessMSLScript, and associated with mishandling of MSLPushImage calls.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2961
3561	CVE-2017-17914	HIGH	Medium	In ImageMagick 7.0.7-16 Q16, a vulnerability was found in the function ReadOnePNGImage in coders/png.c, which allows attackers to cause a denial of service (ReadOneMNGImage large loop) via a crafted mng image file.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2939
3562	CVE-2017-17887	MEDIUM	Medium	In ImageMagick 7.0.7-16 Q16, a memory leak vulnerability was found in the function GetImagePixelCache in magick/cache.c, which allows attackers to cause a denial of service via a crafted MNG image file that is processed by ReadOneMNGImage.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2932
3563	CVE-2017-17886	MEDIUM	Medium	In ImageMagick 7.0.7-12 Q16, a memory leak vulnerability was found in the function ReadPSDChannelZip in coders/psd.c, which allows attackers to cause a denial of service via a crafted psd image file.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2940
3564	CVE-2017-17884	MEDIUM	Medium	In ImageMagick 7.0.7-16 Q16, a memory leak vulnerability was found in the function WriteOnePNGImage in coders/png.c, which allows attackers to cause a denial of service via a crafted PNG image file.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2938
3565	CVE-2017-17883	MEDIUM	Medium	In ImageMagick 7.0.7-12 Q16, a memory leak vulnerability was found in the function ReadPGXImage in coders/pgx.c, which allows attackers to cause a denial of service via a crafted PGX image file.	imagemagick	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2949
3566	CVE-2017-17882	MEDIUM	Medium	In ImageMagick 7.0.7-12 Q16, a memory leak vulnerability was found in the function ReadXPMImage in coders/xpm.c, which allows attackers to cause a denial of service via a crafted XPM image file.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2948
3567	CVE-2017-17881	MEDIUM	Medium	In ImageMagick 7.0.7-12 Q16, a memory leak vulnerability was found in the function ReadMATImage in coders/mat.c, which allows attackers to cause a denial of service via a crafted MAT image file.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2941
3568	CVE-2017-17880	MEDIUM	High	In ImageMagick 7.0.7-16 Q16 x86_64 2017-12-21, there is a stack-based buffer over-read in WriteWEBPImage in coders/webp.c, related to a WEBP_DECODER_ABI_VERSION check.	imagemagick	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	LIN10-2922
3569	CVE-2017-17879	MEDIUM	High	In ImageMagick 7.0.7-16 Q16 x86_64 2017-12-21, there is a heap-based buffer over-read in ReadOneMNGImage in coders/png.c, related to length calculation and caused by an off-by-one error.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2919
3570	CVE-2017-17864	LOW	Low	kernel/bpf/verifier.c in the Linux kernel through 4.14.8 mishandles states_equal comparisons between the pointer data type and the UNKNOWN_VALUE data type, which allows local users to obtain potentially sensitive address information, aka a pointer leak.	linux	Unchanged	8.0.0.27	9.0.0.16	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2967
3571	CVE-2017-17863	HIGH	High	kernel/bpf/verifier.c in the Linux kernel 4.9.x through 4.9.71 does not check the relationship between pointer values and the BPF stack, which allows local users to cause a denial of service (integer overflow or invalid memory access) or possibly have unspecified other impact.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2951
3572	CVE-2017-17862	MEDIUM	Medium	kernel/bpf/verifier.c in the Linux kernel through 4.14.8 ignores unreachable code, even though it would still be processed by JIT compilers. This behavior, also considered an improper branch-pruning logic issue, could possibly be used by local users for denial of service.	linux	Unchanged	8.0.0.26	9.0.0.18	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2956
3573	CVE-2017-17857	HIGH	High	The check_stack_boundary function in kernel/bpf/verifier.c in the Linux kernel through 4.14.8 allows local users to cause a denial of service (memory corruption) or possibly have unspecified other impact by leveraging mishandling of invalid variable stack read operations.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2934
3574	CVE-2017-17856	HIGH	High	kernel/bpf/verifier.c in the Linux kernel through 4.14.8 allows local users to cause a denial of service (memory corruption) or possibly have unspecified other impact by leveraging the lack of stack-pointer alignment enforcement.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2913
3575	CVE-2017-17855	HIGH	High	kernel/bpf/verifier.c in the Linux kernel through 4.14.8 allows local users to cause a denial of service (memory corruption) or possibly have unspecified other impact by leveraging improper use of pointers in place of scalars.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2953
3576	CVE-2017-17854	HIGH	High	kernel/bpf/verifier.c in the Linux kernel through 4.14.8 allows local users to cause a denial of service (integer overflow and memory corruption) or possibly have unspecified other impact by leveraging unrestricted integer values for pointer arithmetic.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2926
3577	CVE-2017-17853	HIGH	High	kernel/bpf/verifier.c in the Linux kernel through 4.14.8 allows local users to cause a denial of service (memory corruption) or possibly have unspecified other impact by leveraging incorrect BPF_RSH signed bounds calculations.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2966
3578	CVE-2017-17852	HIGH	High	kernel/bpf/verifier.c in the Linux kernel through 4.14.8 allows local users to cause a denial of service (memory corruption) or possibly have unspecified other impact by leveraging mishandling of 32-bit ALU ops.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2964

	A	B	C	D	E	F	G	H	I	J	K	L	M
3579	CVE-2017-17840	MEDIUM	High	An issue was discovered in Open-iSCSI through 2.0.875. A local attacker can cause the iscsiuio server to abort or potentially execute code by sending messages with incorrect lengths, which (due to lack of checking) can lead to buffer overflows, and result in aborts (with overflow checking enabled) or code execution. The process_iscsid_broadcast function in iscsiuio/src/unix/iscsid_ipc.c does not validate the payload length before a write operation.	open-iscsi	Unchanged	Investigate	Not vulnerable	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2960
3580	CVE-2017-17821	HIGH	Critical	WTF/wtf/FastBitVector.h in WebKit, as distributed in Safari Technology Preview Release 46, allows remote attackers to cause a denial of service (buffer overflow) or possibly have unspecified other impact because it calls the FastBitVectorWordOwner::resizeSlow function (in WTF/wtf/FastBitVector.cpp) for a purpose other than initializing a bitvector size, and resizeSlow mishandles cases where the old array length is greater than the new array length.	webkit	Unchanged	Investigate	Investigate	Won't Fix	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2915
3581	CVE-2017-17820	MEDIUM	High	In Netwide Assembler (NASM) 2.14rc0, there is a use-after-free in pp_list_one_macro in asm/preproc.c that will lead to a remote denial of service attack, related to mishandling of operand-type errors.	nasm	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2946
3582	CVE-2017-17819	MEDIUM	High	In Netwide Assembler (NASM) 2.14rc0, there is an illegal address access in the function find_cc() in asm/preproc.c that will cause a remote denial of service attack, because pointers associated with skip_white_ calls are not validated.	nasm	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2927
3583	CVE-2017-17818	MEDIUM	High	In Netwide Assembler (NASM) 2.14rc0, there is a heap-based buffer over-read that will cause a remote denial of service attack, related to a while loop in paste_tokens in asm/preproc.c.	nasm	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2916
3584	CVE-2017-17817	MEDIUM	High	In Netwide Assembler (NASM) 2.14rc0, there is a use-after-free in pp_verror in asm/preproc.c that will cause a remote denial of service attack.	nasm	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2935
3585	CVE-2017-17816	MEDIUM	High	In Netwide Assembler (NASM) 2.14rc0, there is a use-after-free in pp_getline in asm/preproc.c that will cause a remote denial of service attack.	nasm	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2923
3586	CVE-2017-17815	MEDIUM	High	In Netwide Assembler (NASM) 2.14rc0, there is an illegal address access in is_mmacro() in asm/preproc.c that will cause a remote denial of service attack, because of a missing check for the relationship between minimum and maximum parameter counts.	nasm	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2963
3587	CVE-2017-17814	MEDIUM	High	In Netwide Assembler (NASM) 2.14rc0, there is a use-after-free in do_directive in asm/preproc.c that will cause a remote denial of service attack.	nasm	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2918
3588	CVE-2017-17813	MEDIUM	High	In Netwide Assembler (NASM) 2.14rc0, there is a use-after-free in the pp_list_one_macro function in asm/preproc.c that will cause a remote denial of service attack, related to mishandling of line-syntax errors.	nasm	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2937
3589	CVE-2017-17812	MEDIUM	High	In Netwide Assembler (NASM) 2.14rc0, there is a heap-based buffer over-read in the function detoken() in asm/preproc.c that will cause a remote denial of service attack.	nasm	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2955
3590	CVE-2017-17811	MEDIUM	High	In Netwide Assembler (NASM) 2.14rc0, there is a heap-based buffer overflow that will cause a remote denial of service attack, related to a strcpy in paste_tokens in asm/preproc.c, a similar issue to CVE-2017-11111.	nasm	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2928
3591	CVE-2017-17810	MEDIUM	High	In Netwide Assembler (NASM) 2.14rc0, there is a SEGV on unknown address that will cause a remote denial of service attack, because asm/preproc.c mishandles macro calls that have the wrong number of arguments.	nasm	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2910
3592	CVE-2017-17807	LOW	Low	The KEYS subsystem in the Linux kernel before 4.14.6 omitted an access-control check when adding a key to the current task's default request-key keyring via the request_key() system call, allowing a local user to use a sequence of crafted system calls to add keys to a keyring with only Search permission (not Write permission) to that keyring, related to construct_get_dest_keyring() in security/keys/request_key.c.	linux	Unchanged	8.0.0.26	9.0.0.15	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2929
3593	CVE-2017-17806	HIGH	High	The HMAC implementation (crypto/hmac.c) in the Linux kernel before 4.14.8 does not validate that the underlying cryptographic hash algorithm is unkeyed, allowing a local attacker able to use the AF_ALG-based hash interface (CONFIG_CRYPTO_USER_API_HASH) and the SHA-3 hash algorithm (CONFIG_CRYPTO_SHA3) to cause a kernel stack buffer overflow by executing a crafted sequence of system calls that encounter a missing SHA-3 initialization.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2936
3594	CVE-2017-17805	HIGH	High	The Salsa20 encryption algorithm in the Linux kernel before 4.14.8 does not correctly handle zero-length inputs, allowing a local attacker able to use the AF_ALG-based skcipher interface (CONFIG_CRYPTO_USER_API_SKCIPHER) to cause a denial of service (uninitialized-memory free and kernel crash) or have unspecified other impact by executing a crafted sequence of system calls that use the blkcipher_walk API. Both the generic implementation (crypto/salsa20_generic.c) and x86 implementation (arch/x86/crypto/salsa20_glue.c) of Salsa20 were vulnerable.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2950
3595	CVE-2017-17790	HIGH	Critical	The lazy_initialize function in lib/resolv.rb in Ruby through 2.4.3 uses Kernel#open, which might allow Command Injection attacks, as demonstrated by a Resolv::Hosts::new argument beginning with a '|' character, a different vulnerability than CVE-2017-17405. NOTE: situations with untrusted input may be highly unlikely.	ruby	Unchanged	8.0.0.25	9.0.0.14	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2947
3596	CVE-2017-17789	MEDIUM	High	In GIMP 2.8.22, there is a heap-based buffer overflow in read_channel_data in plug-ins/common/file-psp.c.	gimp	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2959
3597	CVE-2017-17788	MEDIUM	High	In GIMP 2.8.22, there is a stack-based buffer over-read in xcf_load_stream in app/xcf/xcf.c when there is no '\0' character after the version string.	gimp	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2914

3598	CVE-2017-17787	MEDIUM	High	In GIMP 2.8.22, there is a heap-based buffer over-read in read_creator_block in plug-ins/common/file-psp.c.	gimp	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2954
3599	CVE-2017-17786	MEDIUM	High	In GIMP 2.8.22, there is a heap-based buffer over-read in ReadImage in plug-ins/common/file-tga.c (related to bgr2rgb.part.1) via an unexpected bits-per-pixel value for an RGBA image.	gimp	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2957
3600	CVE-2017-17785	MEDIUM	High	In GIMP 2.8.22, there is a heap-based buffer overflow in the fli_read_brun function in plug-ins/file-fli/fli.c.	gimp	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2943
3601	CVE-2017-17784	MEDIUM	High	In GIMP 2.8.22, there is a heap-based buffer over-read in load_image in plug-ins/common/file-gbr.c in the gbr import parser, related to mishandling of UTF-8 data.	gimp	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2958
3602	CVE-2017-17760	MEDIUM	High	OpenCV 3.3.1 has a Buffer Overflow in the cv::PxMDecoder::readData function in grfmt_pxm.cpp, because an incorrect size value is used.	opencv	Unchanged	Won't Fix	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3069
3603	CVE-2017-17742	MEDIUM	MEDIUM	Ruby before 2.2.10, 2.3.x before 2.3.7, 2.4.x before 2.4.4, 2.5.x before 2.5.1, and 2.6.0-preview1 allows an HTTP Response Splitting attack. An attacker can inject a crafted key and value into an HTTP response for the HTTP server of WEBrick.	ruby	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3738
3604	CVE-2017-17741	LOW	Medium	The KVM implementation in the Linux kernel through 4.14.7 allows attackers to cause a denial of service (write_mmio stack-based out-of-bounds read) or possibly have unspecified other impact, related to arch/x86/kvm/x86.c and include/trace/events/kvm.h.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2921
3605	CVE-2017-17740	MEDIUM	High	contrib/slapd-modules/nops/nops.c in OpenLDAP through 2.4.45, when both the nops module and the memberof overlay are enabled, attempts to free a buffer that was allocated on the stack, which allows remote attackers to cause a denial of service (slapd crash) via a member MODDN operation.	openldap	Unchanged	Vulnerable	Investigate	Investigate	Investigate	Not vulnerable	Investigate	LIN10-2817
3606	CVE-2017-17712	MEDIUM	High	The raw_sendmsg() function in net/ipv4/raw.c in the Linux kernel through 4.14.6 has a race condition in inet->hdrincl that leads to uninitialized stack pointer usage; this allows a local user to execute code and gain privileges.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2796
3607	CVE-2017-17682	HIGH	Medium	In ImageMagick 7.0.7-12 Q16, a large loop vulnerability was found in the function ExtractPostscript in coders/wpg.c, which allows attackers to cause a denial of service (CPU exhaustion) via a crafted wpg image file that triggers a ReadWPGImage call.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2758
3608	CVE-2017-17681	HIGH	Medium	In ImageMagick 7.0.7-12 Q16, an infinite loop vulnerability was found in the function ReadPSDChannelZip in coders/psd.c, which allows attackers to cause a denial of service (CPU exhaustion) via a crafted psd image file.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2750
3609	CVE-2017-17680	MEDIUM	Medium	In ImageMagick 7.0.7-12 Q16, a memory leak vulnerability was found in the function ReadXPMImage in coders/xpm.c, which allows attackers to cause a denial of service via a crafted xpm image file.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2770
3610	CVE-2017-17558	HIGH	Medium	The usb_destroy_configuration function in drivers/usb/core/config.c in the USB core subsystem in the Linux kernel through 4.14.5 does not consider the maximum number of configurations and interfaces before attempting to release resources, which allows local users to cause a denial of service (out-of-bounds write access) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2782
3611	CVE-2017-17555	MEDIUM	Medium	The swri_audio_convert function in audioconvert.c in FFmpeg libswresample through 3.0.101, as used in FFmpeg 3.4.1, aubio 0.4.6, and other products, allows remote attackers to cause a denial of service (NULL pointer dereference and application crash) via a crafted audio file.	ffmpeg	Unchanged	Not vulnerable	Vulnerable	Investigate	Investigate	Not vulnerable	Not vulnerable	LIN10-2749
3612	CVE-2017-17529	MEDIUM	High	af/util/xp/ut_go_file.cpp in AbiWord 3.0.2-2 does not validate strings before launching the program specified by the BROWSER environment variable, which might allow remote attackers to conduct argument-injection attacks via a crafted URL.	abiword	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2965
3613	CVE-2017-17522	MEDIUM	High	Lib/webbrowser.py in Python through 3.6.3 does not validate strings before launching the program specified by the BROWSER environment variable, which might allow remote attackers to conduct argument-injection attacks via a crafted URL.	python	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2952
3614	CVE-2017-17521	MEDIUM	High	uiutil.c in FontForge through 20170731 does not validate strings before launching the program specified by the BROWSER environment variable, which might allow remote attackers to conduct argument-injection attacks via a crafted URL, a different vulnerability than CVE-2017-17534.	fontforge	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2962
3615	CVE-2017-17504	MEDIUM	Medium	ImageMagick before 7.0.7-12 has a coders/png.c Magick_png_read_raw_profile heap-based buffer over-read via a crafted file, related to ReadOneMNGImage.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2745
3616	CVE-2017-17499	HIGH	Critical	ImageMagick before 6.9.9-24 and 7.x before 7.0.7-12 has a use-after-free in Magick::Image::read in Magick++/lib/Image.cpp.	imagemagick	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2771
3617	CVE-2017-17484	HIGH	Critical	The ucnv_UTF8FromUTF8 function in ucnv_u8.cpp in International Components for Unicode (ICU) for C/C++ through 60.1 mishandles ucnv_convertEx calls for UTF-8 to UTF-8 conversion, which allows remote attackers to cause a denial of service (stack-based buffer overflow and application crash) or possibly have unspecified other impact via a crafted string, as demonstrated by ZNC.	icu	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2755
3618	CVE-2017-17480	HIGH	Critical	In OpenJPEG 2.3.0, a stack-based buffer overflow was discovered in the pgxtovolume function in jp3d/convert.c. The vulnerability causes an out-of-bounds write, which may lead to remote denial of service or possibly remote code execution.	openjpeg	Unchanged	Won't Fix	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2759
3619	CVE-2017-17479	HIGH	Critical	In OpenJPEG 2.3.0, a stack-based buffer overflow was discovered in the pgxtoimage function in jpwl/convert.c. The vulnerability causes an out-of-bounds write, which may lead to remote denial of service or possibly remote code execution.	openjpeg	Unchanged	Won't Fix	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2778

	A	B	C	D	E	F	G	H	I	J	K	L	M
3620	CVE-2017-17458	HIGH	Critical	In Mercurial before 4.4.1, it is possible that a specially malformed repository can cause Git subrepositories to run arbitrary code in the form of a .git/hooks/post-update script checked into the repository. Typical use of Mercurial prevents construction of such repositories, but they can be created programmatically.	mercurial	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2762
3621	CVE-2017-17457	MEDIUM	Medium	The function d2ulaw_array() in ulaw.c of libsndfile 1.0.29pre1 may lead to a remote DoS attack (SEGV on unknown address 0x000000000000), a different vulnerability than CVE-2017-14246.	libsndfile	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	10.19.45.1	Not vulnerable	LIN10-2763
3622	CVE-2017-17456	MEDIUM	Medium	The function d2alaw_array() in alaw.c of libsndfile 1.0.29pre1 may lead to a remote DoS attack (SEGV on unknown address 0x000000000000), a different vulnerability than CVE-2017-14245.	libsndfile	Unchanged	8.0.0.30	9.0.0.20	10.17.41.15	10.18.44.4	10.19.45.1	Not vulnerable	LIN10-2776
3623	CVE-2017-17450	MEDIUM	High	net/netfilter/xt_osf.c in the Linux kernel through 4.14.4 does not require the CAP_NET_ADMIN capability for add_callback and remove_callback operations, which allows local users to bypass intended access restrictions because the xt_osf_fingers data structure is shared across all net namespaces.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2757
3624	CVE-2017-17449	LOW	Medium	The __netlink_deliver_tap_skb function in net/netlink/af_netlink.c in the Linux kernel through 4.14.4, when CONFIG_NLMON is enabled, does not restrict observations of Netlink messages to a single net namespace, which allows local users to obtain sensitive information by leveraging the CAP_NET_ADMIN capability to sniff an nlmon interface for all Netlink activity on the system.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2760
3625	CVE-2017-17448	MEDIUM	High	net/netfilter/nfnetlink_cthelper.c in the Linux kernel through 4.14.4 does not require the CAP_NET_ADMIN capability for new, get, and del operations, which allows local users to bypass intended access restrictions because the nfnl_cthelper_list data structure is shared across all net namespaces.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2756
3626	CVE-2017-17434	HIGH	Critical	The daemon in rsync 3.1.2, and 3.1.3-development before 2017-12-03, does not check for fnamecmp filenames in the daemon_filter_list data structure (in the recv_files function in receiver.c) and also does not apply the sanitize_paths protection mechanism to pathnames found in xname follows strings (in the read_ndx_and_attrs function in rsync.c), which allows remote attackers to bypass intended access restrictions.	rsync	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2737
3627	CVE-2017-17433	HIGH	Critical	The recv_files function in receiver.c in the daemon in rsync 3.1.2, and 3.1.3-development before 2017-12-03, proceeds with certain file metadata updates before checking for a filename in the daemon_filter_list data structure, which allows remote attackers to bypass intended access restrictions.	rsync	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2736
3628	CVE-2017-17426	MEDIUM	High	The malloc function in the GNU C Library (aka glibc or libc6) 2.26 could return a memory block that is too small if an attempt is made to allocate an object whose size is close to SIZE_MAX, potentially leading to a subsequent heap overflow. This occurs because the per-thread cache (aka tcache) feature enables a code path that lacks an integer overflow check.	glibc	Unchanged	Not vulnerable	Not vulnerable	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2780
3629	CVE-2017-17405	HIGH	High	Ruby before 2.4.3 allows Net::FTP command injection. Net::FTP#get, getbinaryfile, gettextfile, put, putbinaryfile, and puttextfile use Kernel#open to open a local file. If the localfile argument starts with the | pipe character, the command following the pipe character is executed. The default value of localfile is File.basename(remotefile), so malicious FTP servers could cause arbitrary command execution.	ruby	Unchanged	8.0.0.25	9.0.0.14	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2930
3630	CVE-2017-17381	LOW	Medium	The Virtio Vring implementation in QEMU allows local OS guest users to cause a denial of service (divide-by-zero error and QEMU process crash) by unsetting vring alignment while updating Virtio rings.	qemu	Unchanged	8.0.0.25	9.0.0.14	10.17.41.4	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2738
3631	CVE-2017-17130	MEDIUM	High	The ff_free_picture_tables function in libavcodec/mpegpicture.c in Libav 12.2 allows remote attackers to cause a denial of service (heap-based buffer overflow and application crash) or possibly have unspecified other impact via a crafted file, related to vc1_decode_i_blocks_adv.	libav	Unchanged	8.0.0.28	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	LIN10-2746
3632	CVE-2017-17129	MEDIUM	High	The ff_vc1_mc_4mv_chroma4 function in libavcodec/vc1_mc.c in Libav 12.2 allows remote attackers to cause a denial of service (segmentation fault and application crash) or possibly have unspecified other impact via a crafted file.	libav	Unchanged	Vulnerable	9.0.0.19	10.17.41.13	Won't Fix	Won't Fix	Won't Fix	LIN10-2777
3633	CVE-2017-17128	MEDIUM	Medium	The h264_slice_init function in libavcodec/h264_slice.c in Libav 12.2 allows remote attackers to cause a denial of service (segmentation fault and application crash) via a crafted file.	libav	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	LIN10-2781
3634	CVE-2017-17127	MEDIUM	Medium	The vc1_decode_frame function in libavcodec/vc1dec.c in Libav 12.2 allows remote attackers to cause a denial of service (NULL pointer dereference and application crash) via a crafted file.	libav	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	LIN10-2754
3635	CVE-2017-17126	MEDIUM	High	The load_debug_section function in readelf.c in GNU Binutils 2.29.1 allows remote attackers to cause a denial of service (invalid memory access and application crash) or possibly have unspecified other impact via an ELF file that lacks section headers.	binutils	Unchanged	8.0.0.25	9.0.0.14	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2764
3636	CVE-2017-17125	MEDIUM	High	nm.c and objdump.c in GNU Binutils 2.29.1 mishandle certain global symbols, which allows remote attackers to cause a denial of service (_bfd_elf_get_symbol_version_string buffer over-read and application crash) or possibly have unspecified other impact via a crafted ELF file.	binutils	Unchanged	8.0.0.25	9.0.0.14	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2742
3637	CVE-2017-17124	MEDIUM	High	The _bfd_coff_read_string_table function in coffgen.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29.1, does not properly validate the size of the external string table, which allows remote attackers to cause a denial of service (excessive memory consumption, or heap-based buffer overflow and application crash) or possibly have unspecified other impact via a crafted COFF binary.	binutils	Unchanged	8.0.0.25	9.0.0.14	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2772

	A	B	C	D	E	F	G	H	I	J	K	L	M
3638	CVE-2017-17123	MEDIUM	Medium	The coff_slurp_reloc_table function in coffcode.h in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29.1, allows remote attackers to cause a denial of service (NULL pointer dereference and application crash) via a crafted COFF based file.	binutils	Unchanged	8.0.0.25	9.0.0.14	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2753
3639	CVE-2017-17122	MEDIUM	High	The dump_relocs_in_section function in objdump.c in GNU Binutils 2.29.1 does not check for reloc count integer overflows, which allows remote attackers to cause a denial of service (excessive memory allocation, or heap-based buffer overflow and application crash) or possibly have unspecified other impact via a crafted PE file.	binutils	Unchanged	8.0.0.25	9.0.0.14	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2774
3640	CVE-2017-17121	MEDIUM	High	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29.1, allows remote attackers to cause a denial of service (memory access violation) or possibly have unspecified other impact via a COFF binary in which a relocation refers to a location after the end of the to-be-relocated section.	binutils	Unchanged	8.0.0.25	9.0.0.15	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2769
3641	CVE-2017-17095	MEDIUM	High	tools/pal2rgb.c in pal2rgb in LibTIFF 4.0.9 allows remote attackers to cause a denial of service (TIFFSetupStrips heap-based buffer overflow and application crash) or possibly have unspecified other impact via a crafted TIFF file.	libtiff	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2740
3642	CVE-2017-17089	LOW	Medium	custom/run.cgi in Webmin before 1.870 allows remote authenticated administrators to conduct XSS attacks via the description field in the custom command functionality.	webmin	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3092
3643	CVE-2017-17087	LOW	Medium	fileio.c in Vim prior to 8.0.1263 sets the group ownership of a .swp file to the editor's primary group (which may be different from the group ownership of the original file), which allows local users to obtain sensitive information by leveraging an applicable group membership, as demonstrated by /etc/shadow owned by root:shadow mode 0640, but /etc/.shadow.swp owned by root:users mode 0640, a different vulnerability than CVE-2017-1000382.	vim	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2751
3644	CVE-2017-17085	MEDIUM	High	In Wireshark 2.4.0 to 2.4.2 and 2.2.0 to 2.2.10, the CIP Safety dissector could crash. This was addressed in epan/dissectors/packet-cipsafety.c by validating the packet length.	wireshark	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2741
3645	CVE-2017-17084	MEDIUM	High	In Wireshark 2.4.0 to 2.4.2 and 2.2.0 to 2.2.10, the IWARP_MPA dissector could crash. This was addressed in epan/dissectors/packet-iwarp-mpa.c by validating a ULPDU length.	wireshark	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2773
3646	CVE-2017-17083	MEDIUM	High	In Wireshark 2.4.0 to 2.4.2 and 2.2.0 to 2.2.10, the NetBIOS dissector could crash. This was addressed in epan/dissectors/packet-netbios.c by ensuring that write operations are bounded by the beginning of a buffer.	wireshark	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2752
3647	CVE-2017-17081	MEDIUM	Medium	The gmc_mmx function in libavcodec/x86/mpegvideodsp.c in FFmpeg 3.4 does not properly validate widths and heights, which allows remote attackers to cause a denial of service (integer signedness error and out-of-array read) via a crafted MPEG file.	ffmpeg	Unchanged	Not vulnerable	9.0.0.14	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2766
3648	CVE-2017-17080	MEDIUM	Medium	elf.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29.1, does not validate sizes of core notes, which allows remote attackers to cause a denial of service (bfd_getl32 heap-based buffer over-read and application crash) via a crafted object file, related to elfcore_grok_netbsd_procinfo, elfcore_grok_openbsd_procinfo, and elfcore_grok_nto_status.	binutils	Unchanged	8.0.0.25	9.0.0.14	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2775
3649	CVE-2017-17053	HIGH	High	The init_new_context function in arch/x86/include/asm/mmu_context.h in the Linux kernel before 4.12.10 does not correctly handle errors from LDT table allocation when forking a new process, allowing a local attacker to achieve a use-after-free or possibly have unspecified other impact by running a specially crafted program. This vulnerability only affected kernels built with CONFIG_MODIFY_LDT_SYSCALL=y.	linux	Unchanged	Not vulnerable	9.0.0.14	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2631
3650	CVE-2017-17052	HIGH	High	The mm_init function in kernel/fork.c in the Linux kernel before 4.12.10 does not clear the ->exe_file member of a new process's mm_struct, allowing a local attacker to achieve a use-after-free or possibly have unspecified other impact by running a specially crafted program.	linux	Unchanged	8.0.0.25	9.0.0.14	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2640
3651	CVE-2017-17042	MEDIUM	High	lib/yard/core_ext/file.rb in the server in YARD before 0.9.11 does not block relative paths with an initial ../ sequence, which allows attackers to conduct directory traversal attacks and read arbitrary files.	yard	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2617
3652	CVE-2017-16997	HIGH	High	elf/dl-load.c in the GNU C Library (aka glibc or libc6) 2.19 through 2.26 mishandles RPATH and RUNPATH containing $ORIGIN for a privileged (setuid or AT_SECURE) program, which allows local users to gain privileges via a Trojan horse library in the current working directory, related to the fillin_rpath and decompose_rpath functions. This is associated with misinterpretion of an empty RPATH/RUNPATH token as the ./ directory. NOTE: this configuration of RPATH/RUNPATH for a privileged program is apparently very uncommon; most likely, no such program is shipped with any common Linux distribution.	glibc	Unchanged	8.0.0.25	9.0.0.15	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2816
3653	CVE-2017-16996	HIGH	High	kernel/bpf/verifier.c in the Linux kernel through 4.14.8 allows local users to cause a denial of service (memory corruption) or possibly have unspecified other impact by leveraging register truncation mishandling.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2917
3654	CVE-2017-16995	HIGH	High	The check_alu_op function in kernel/bpf/verifier.c in the Linux kernel through 4.14.8 allows local users to cause a denial of service (memory corruption) or possibly have unspecified other impact by leveraging incorrect sign extension.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2912

	A	B	C	D	E	F	G	H	I	J	K	L	M
3655	CVE-2017-16994	LOW	Medium	The walk_hugetlb_range function in mm/pagewalk.c in the Linux kernel before 4.14.2 mishandles holes in hugetlb ranges, which allows local users to obtain sensitive information from uninitialized kernel memory via crafted use of the mincore() system call.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2597
3656	CVE-2017-16942	MEDIUM	Medium	In libsndfile 1.0.25 (fixed in 1.0.26), a divide-by-zero error exists in the function wav_w64_read_fmt_chunk() in wav_w64.c, which may lead to DoS when playing a crafted audio file.	libsndfile	Unchanged	8.0.0.25	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2610
3657	CVE-2017-16939	HIGH	High	The XFRM dump policy implementation in net/xfrm/xfrm_user.c in the Linux kernel before 4.13.11 allows local users to gain privileges or cause a denial of service (use-after-free) via a crafted SO_RCVBUF setsockopt system call in conjunction with XFRM_MSG_GETPOLICY Netlink messages.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2641
3658	CVE-2017-16932	MEDIUM	High	parser.c in libxml2 before 2.9.5 does not prevent infinite recursion in parameter entities.	libxml2	Unchanged	8.0.0.24	9.0.0.13	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2629
3659	CVE-2017-16931	HIGH	Critical	parser.c in libxml2 before 2.9.5 mishandles parameter-entity references because the NEXTL macro calls the xmlParserHandlePEReference function in the case of a '%' character in a DTD name.	libxml2	Unchanged	8.0.0.24	9.0.0.13	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2633
3660	CVE-2017-16914	High	Medium	The stub_send_ret_submit() function (drivers/usb/usbip/stub_tx.c) in the Linux Kernel before version 4.14.8, 4.9.71, 4.1.49, and 4.4.107 allows attackers to cause a denial of service (NULL pointer dereference) via a specially crafted USB over IP packet.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3414
3661	CVE-2017-16913	High	Medium	The stub_recv_cmd_submit() function (drivers/usb/usbip/stub_rx.c) in the Linux Kernel before version 4.14.8, 4.9.71, and 4.4.114 when handling CMD_SUBMIT packets allows attackers to cause a denial of service (arbitrary memory allocation) via a specially crafted USB over IP packet.	linux	Unchanged	8.0.0.26	9.0.0.15	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3333
3662	CVE-2017-16912	High	Medium	The get_pipe() function (drivers/usb/usbip/stub_rx.c) in the Linux Kernel before version 4.14.8, 4.9.71, and 4.4.114 allows attackers to cause a denial of service (out-of-bounds read) via a specially crafted USB over IP packet.	linux	Unchanged	8.0.0.26	9.0.0.18	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3311
3663	CVE-2017-16911	Low	Medium	The vhci_hcd driver in the Linux Kernel before version 4.14.8 and 4.4.114 allows allows local attackers to disclose kernel memory addresses. Successful exploitation requires that a USB device is attached over IP.	linux	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3359
3664	CVE-2017-16879	MEDIUM	High	Stack-based buffer overflow in the _nc_write_entry function in tinfo/write_entry.c in ncurses 6.0 allows attackers to cause a denial of service (application crash) or possibly execute arbitrary code via a crafted terminfo file, as demonstrated by tic.	ncurses	Unchanged	Investigate	Investigate	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2639
3665	CVE-2017-16845	HIGH	Critical	hw/input/ps2.c in Qemu does not validate 'rptr' and 'count' values during guest migration, leading to out-of-bounds access.	qemu	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2638
3666	CVE-2017-16840	HIGH	Critical	The VC-2 Video Compression encoder in FFmpeg 3.4 allows remote attackers to cause a denial of service (out-of-bounds read) because of incorrect buffer padding for non-Haar wavelets, related to libavcodec/vc2enc.c and libavcodec/vc2enc_dwt.c.	ffmpeg	Unchanged	Won't Fix	9.0.0.13	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2626
3667	CVE-2017-16832	MEDIUM	High	The pe_bfd_read_buildid function in peicode.h in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29.1, does not validate size and offset values in the data dictionary, which allows remote attackers to cause a denial of service (segmentation violation and application crash) or possibly have unspecified other impact via a crafted PE file.	binutils	Unchanged	Not vulnerable	9.0.0.14	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2628
3668	CVE-2017-16831	MEDIUM	High	coffgen.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29.1, does not validate the symbol count, which allows remote attackers to cause a denial of service (integer overflow and application crash, or excessive memory allocation) or possibly have unspecified other impact via a crafted PE file.	binutils	Unchanged	8.0.0.25	9.0.0.14	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2622
3669	CVE-2017-16830	MEDIUM	High	The print_gnu_property_note function in readelf.c in GNU Binutils 2.29.1 does not have integer-overflow protection on 32-bit platforms, which allows remote attackers to cause a denial of service (segmentation violation and application crash) or possibly have unspecified other impact via a crafted ELF file.	binutils	Unchanged	Not vulnerable	Not vulnerable	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2637
3670	CVE-2017-16829	MEDIUM	High	The _bfd_elf_parse_gnu_properties function in elf-properties.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29.1, does not prevent negative pointers, which allows remote attackers to cause a denial of service (out-of-bounds read and application crash) or possibly have unspecified other impact via a crafted ELF file.	binutils	Unchanged	Not vulnerable	Not vulnerable	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2618
3671	CVE-2017-16828	MEDIUM	High	The display_debug_frames function in dwarf.c in GNU Binutils 2.29.1 allows remote attackers to cause a denial of service (integer overflow and heap-based buffer over-read, and application crash) or possibly have unspecified other impact via a crafted ELF file, related to print_debug_frame.	binutils	Unchanged	8.0.0.25	9.0.0.14	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2630
3672	CVE-2017-16827	MEDIUM	High	The aout_get_external_symbols function in aoutx.h in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29.1, allows remote attackers to cause a denial of service (slurp_symtab invalid free and application crash) or possibly have unspecified other impact via a crafted ELF file.	binutils	Unchanged	8.0.0.25	9.0.0.14	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2635
3673	CVE-2017-16826	MEDIUM	High	The coff_slurp_line_table function in coffcode.h in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29.1, allows remote attackers to cause a denial of service (invalid memory access and application crash) or possibly have unspecified other impact via a crafted PE file.	binutils	Unchanged	8.0.0.25	9.0.0.14	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2611
3674	CVE-2017-16820	HIGH	Critical	The csnmp_read_table function in snmp.c in the SNMP plugin in collectd before 5.6.3 is susceptible to a double free in a certain error case, which could lead to a crash (or potentially have other impact).	collectd	Unchanged	8.0.0.25	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2642

	A	B	C	D	E	F	G	H	I	J	K	L	M
3675	CVE-2017-16808	MEDIUM	Medium	tcpdump 4.9.2 has a heap-based buffer over-read related to aoe_print in print-aoe.c and lookup_emem in addrtoname.c.	tcpdump	Unchanged	8.0.0.33	9.0.0.25	10.17.41.20	10.18.44.15	10.19.45.1	Not vulnerable	LIN10-2623
3676	CVE-2017-16803	MEDIUM	High	In Libav through 11.11 and 12.x through 12.1, the smacker_decode_tree function in libavcodec/smacker.c does not properly restrict tree recursion, which allows remote attackers to cause a denial of service (bitstream.c:build_table() out-of-bounds read and application crash) via a crafted Smacker stream.	libav	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Won't Fix	Won't Fix	LIN10-2632
3677	CVE-2017-16650	HIGH	Medium	The qmi_wwan_bind function in drivers/net/usb/qmi_wwan.c in the Linux kernel through 4.13.11 allows local users to cause a denial of service (divide-by-zero error and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2481
3678	CVE-2017-16649	HIGH	Medium	The usbnet_generic_cdc_bind function in drivers/net/usb/cdc_ether.c in the Linux kernel through 4.13.11 allows local users to cause a denial of service (divide-by-zero error and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2502
3679	CVE-2017-16648	HIGH	Medium	The dvb_frontend_free function in drivers/media/dvb-core/dvb_frontend.c in the Linux kernel through 4.13.11 allows local users to cause a denial of service (use-after-free and system crash) or possibly have unspecified other impact via a crafted USB device. NOTE: the function was later renamed __dvb_frontend_free.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2479
3680	CVE-2017-16647	HIGH	Medium	drivers/net/usb/asix_devices.c in the Linux kernel through 4.13.11 allows local users to cause a denial of service (NULL pointer dereference and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	Won't Fix	Won't Fix	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2482
3681	CVE-2017-16646	HIGH	Medium	drivers/media/usb/dvb-usb/dib0700_devices.c in the Linux kernel through 4.13.11 allows local users to cause a denial of service (BUG and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2508
3682	CVE-2017-16645	HIGH	Medium	The ims_pcu_get_cdc_union_desc function in drivers/input/misc/ims-pcu.c in the Linux kernel through 4.13.11 allows local users to cause a denial of service (ims_pcu_parse_cdc_data out-of-bounds read and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2495
3683	CVE-2017-16644	HIGH	Medium	The hdpvr_probe function in drivers/media/usb/hdpvr/hdpvr-core.c in the Linux kernel through 4.13.11 allows local users to cause a denial of service (improper error handling and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2483
3684	CVE-2017-16643	HIGH	Medium	The parse_hid_report_descriptor function in drivers/input/tablet/gtco.c in the Linux kernel before 4.13.11 allows local users to cause a denial of service (out-of-bounds read and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2497
3685	CVE-2017-16642	MEDIUM	High	In PHP before 5.6.32, 7.x before 7.0.25, and 7.1.x before 7.1.11, an error in the date extension's timelib_meridian handling of 'front of' and 'back of' directives could be used by attackers able to supply date strings to leak information from the interpreter, related to ext/date/lib/parse_date.c out-of-bounds reads affecting the php_parse_date function. NOTE: this is a different issue than CVE-2017-11145.	php	Unchanged	8.0.0.24	9.0.0.13	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2506
3686	CVE-2017-16612	MEDIUM	High	libXcursor before 1.1.15 has various integer overflows that could lead to heap buffer overflows when processing malicious cursors, e.g., with programs like GIMP.	libxcursor	Unchanged	8.0.0.25	9.0.0.14	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2779
3687	CVE-2017-16611	LOW	Medium	In libXfont before 1.5.4 and libXfont2 before 2.0.3, a local attacker can open (but not read) files on the system as root, triggering tape rewinds, watchdogs, or similar mechanisms that can be triggered by opening files.	libxfont	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2743
3688	CVE-2017-16548	HIGH	Critical	The receive_xattr function in xattrs.c in rsync 3.1.2 and 3.1.3-development does not check for a trailing \0 character in an xattr name, which allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) or possibly have unspecified other impact by sending crafted data to the daemon.	rsync	Unchanged	8.0.0.24	9.0.0.13	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2490
3689	CVE-2017-16546	MEDIUM	High	The ReadWPGImage function in coders/wpg.c in ImageMagick 7.0.7-9 does not properly validate the colormap index in a WPG palette, which allows remote attackers to cause a denial of service (use of uninitialized data or invalid memory allocation) or possibly have unspecified other impact via a malformed WPG file.	imagemagick	Unchanged	8.0.0.24	9.0.0.13	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2484
3690	CVE-2017-16544	MEDIUM	High	In the add_match function in libbb/lineedit.c in BusyBox through 1.27.2, the tab autocomplete feature of the shell, used to get a list of filenames in a directory, does not sanitize filenames and results in executing any escape sequence in the terminal. This could potentially result in code execution, arbitrary file writes, or other attacks.	busybox	Unchanged	8.0.0.24	9.0.0.13	10.17.41.2	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2620
3691	CVE-2017-16538	HIGH	Medium	drivers/media/usb/dvb-usb-v2/lmedm04.c in the Linux kernel through 4.13.11 allows local users to cause a denial of service (general protection fault and system crash) or possibly have unspecified other impact via a crafted USB device, related to a missing warm-start check and incorrect attach timing (dm04_lme2510_frontend_attach versus dm04_lme2510_tuner).	linux	Unchanged	8.0.0.26	9.0.0.15	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2512
3692	CVE-2017-16537	HIGH	Medium	The imon_probe function in drivers/media/rc/imon.c in the Linux kernel through 4.13.11 allows local users to cause a denial of service (NULL pointer dereference and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.25	9.0.0.15	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2494

	A	B	C	D	E	F	G	H	I	J	K	L	M
3693	CVE-2017-16536	HIGH	Medium	The cx231xx_usb_probe function in drivers/media/usb/cx231xx/cx231xx-cards.c in the Linux kernel through 4.13.11 allows local users to cause a denial of service (NULL pointer dereference and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.25	9.0.0.14	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2500
3694	CVE-2017-16535	HIGH	Medium	The usb_get_bos_descriptor function in drivers/usb/core/config.c in the Linux kernel before 4.13.10 allows local users to cause a denial of service (out-of-bounds read and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2511
3695	CVE-2017-16534	HIGH	Medium	The cdc_parse_cdc_header function in drivers/usb/core/message.c in the Linux kernel before 4.13.6 allows local users to cause a denial of service (out-of-bounds read and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	Not vulnerable	9.0.0.15	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2499
3696	CVE-2017-16533	HIGH	Medium	The usbhid_parse function in drivers/hid/usbhid/hid-core.c in the Linux kernel before 4.13.8 allows local users to cause a denial of service (out-of-bounds read and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2503
3697	CVE-2017-16532	HIGH	Medium	The get_endpoints function in drivers/usb/misc/usbtest.c in the Linux kernel through 4.13.11 allows local users to cause a denial of service (NULL pointer dereference and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.30	9.0.0.14	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2473
3698	CVE-2017-16531	HIGH	Medium	drivers/usb/core/config.c in the Linux kernel before 4.13.6 allows local users to cause a denial of service (out-of-bounds read and system crash) or possibly have unspecified other impact via a crafted USB device, related to the USB_DT_INTERFACE_ASSOCIATION descriptor.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2496
3699	CVE-2017-16530	HIGH	Medium	The uas driver in the Linux kernel before 4.13.6 allows local users to cause a denial of service (out-of-bounds read and system crash) or possibly have unspecified other impact via a crafted USB device, related to drivers/usb/storage/uas-detect.h and drivers/usb/storage/uas.c.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2510
3700	CVE-2017-16529	HIGH	Medium	The snd_usb_create_streams function in sound/usb/card.c in the Linux kernel before 4.13.6 allows local users to cause a denial of service (out-of-bounds read and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2486
3701	CVE-2017-16528	HIGH	Medium	sound/core/seq_device.c in the Linux kernel before 4.13.4 allows local users to cause a denial of service (snd_rawmidi_dev_seq_free use-after-free and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.27	9.0.0.18	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2476
3702	CVE-2017-16527	HIGH	Medium	sound/usb/mixer.c in the Linux kernel before 4.13.8 allows local users to cause a denial of service (snd_usb_mixer_interrupt use-after-free and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2498
3703	CVE-2017-16526	HIGH	High	drivers/uwb/uwbd.c in the Linux kernel before 4.13.6 allows local users to cause a denial of service (general protection fault and system crash) or possibly have unspecified other impact via a crafted USB device.	linux	Unchanged	8.0.0.27	9.0.0.18	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2485
3704	CVE-2017-16525	HIGH	Medium	The usb_serial_console_disconnect function in drivers/usb/serial/console.c in the Linux kernel before 4.13.8 allows local users to cause a denial of service (use-after-free and system crash) or possibly have unspecified other impact via a crafted USB device, related to disconnection and failed setup.	linux	Unchanged	8.0.0.25	9.0.0.15	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2471
3705	CVE-2017-16516	MEDIUM	High	In the yajl-ruby gem 1.3.0 for Ruby, when a crafted JSON file is supplied to Yajl::Parser.new.parse, the whole ruby process crashes with a SIGABRT in the yajl_string_decode function in yajl_encode.c. This results in the whole ruby process terminating and potentially a denial of service.	yajl-ruby	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2472
3706	CVE-2017-16232	MEDIUM	HIGH	tools/tiff2bw.c (main): Free memory allocated in the tiff2bw Program.	libtiff	Unchanged	8.0.0.25	9.0.0.14	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3068
3707	CVE-2017-16227	MEDIUM	High	The aspath_put function in bgpd/bgp_aspath.c in Quagga before 1.2.2 allows remote attackers to cause a denial of service (session drop) via BGP UPDATE messages, because AS_PATH size calculation for long paths counts certain bytes twice and consequently constructs an invalid message.	quagga	Unchanged	8.0.0.24	9.0.0.13	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2507
3708	CVE-2017-15996	MEDIUM	High	elfcomm.c in readelf in GNU Binutils 2.29 allows remote attackers to cause a denial of service (excessive memory allocation) or possibly have unspecified other impact via a crafted ELF file that triggers a buffer overflow on fuzzed archive header, related to an uninitialized variable, an improper conditional jump, and the get_archive_member_name, process_archive_index_and_symbols, and setup_archive functions.	binutils	Unchanged	8.0.0.25	9.0.0.14	10.17.41.8	Vulnerable	Vulnerable	Vulnerable	LIN9-5773
3709	CVE-2017-15994	HIGH	Critical	rsync 3.1.3-development before 2017-10-24, as used in the xlucas svfs rsync fork and other products, mishandles archaic checksums, which makes it easier for remote attackers to bypass intended access restrictions.	rsync	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5689
3710	CVE-2017-15951	HIGH	High	The KEYS subsystem in the Linux kernel before 4.13.10 does not correctly synchronize the actions of updating versus finding a key in the negative state to avoid a race condition, which allows local users to cause a denial of service or possibly have unspecified other impact via crafted system calls.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5673
3711	CVE-2017-15939	MEDIUM	Medium	dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, mishandles NULL files in a .debug_line file table, which allows remote attackers to cause a denial of service (NULL pointer dereference and application crash) via a crafted ELF file, related to concat_filename. NOTE: this issue is caused by an incomplete fix for CVE-2017-15023.	binutils	Unchanged	8.0.0.25	9.0.0.12	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5678

	A	B	C	D	E	F	G	H	I	J	K	L	M
3712	CVE-2017-15938	MEDIUM	High	dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, miscalculates DW_FORM_ref_addr die refs in the case of a relocatable object file, which allows remote attackers to cause a denial of service (find_abstract_instance_name invalid memory read, segmentation fault, and application crash).	binutils	Unchanged	8.0.0.25	9.0.0.12	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5734
3713	CVE-2017-15908	MEDIUM	High	In systemd 223 through 235, a remote DNS server can respond with a custom crafted DNS NSEC resource record to trigger an infinite loop in the dns_packet_read_type_window() function of the 'systemd-resolved' service and cause a DoS of the affected service.	systemd	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5692
3714	CVE-2017-15906	MEDIUM	Medium	The process_open function in sftp-server.c in OpenSSH before 7.6 does not properly prevent write operations in readonly mode, which allows attackers to create zero-length files.	openssh	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5676
3715	CVE-2017-15874	MEDIUM	Medium	archival/libarchive/decompress_unlzma.c in BusyBox 1.27.2 has an Integer Underflow that leads to a read access violation.	busybox	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5730
3716	CVE-2017-15873	MEDIUM	Medium	The get_next_block function in archival/libarchive/decompress_bunzip2.c in BusyBox 1.27.2 has an Integer Overflow that may lead to a write access violation.	busybox	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5700
3717	CVE-2017-15868	HIGH	High	The bnep_add_connection function in net/bluetooth/bnep/core.c in the Linux kernel before 3.19 does not ensure that an l2cap socket is available, which allows local users to gain privileges via a crafted application.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2739
3718	CVE-2017-15804	High	Critical	The glob function in glob.c in the GNU C Library (aka glibc or libc6) before 2.27 contains a buffer overflow during unescaping of user names with the ~ operator.	glibc	Unchanged	8.0.0.25	9.0.0.12	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5731
3719	CVE-2017-15723	Medium	High	In Irssi before 1.0.5, overlong nicks or targets may result in a NULL pointer dereference while splitting the message.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5715
3720	CVE-2017-15722	Medium	High	In certain cases, Irssi before 1.0.5 may fail to verify that a Safe channel ID is long enough, causing reads beyond the end of the string.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5697
3721	CVE-2017-15721	Medium	High	In Irssi before 1.0.5, certain incorrectly formatted DCC CTCP messages could cause a NULL pointer dereference. This is a separate, but similar, issue relative to CVE-2017-9468.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5685
3722	CVE-2017-15715	MEDIUM	HIGH	In Apache httpd 2.4.0 to 2.4.29, the expression specified in <FilesMatch> could match '$' to a newline character in a malicious filename, rather than matching only the end of the filename. This could be exploited in environments where uploads of some files are are externally blocked, but only by matching the trailing portion of the filename.	apache	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3652
3723	CVE-2017-15710	MEDIUM	HIGH	In Apache httpd 2.0.23 to 2.0.65, 2.2.0 to 2.2.34, and 2.4.0 to 2.4.29, mod_authnz_ldap, if configured with AuthLDAPCharsetConfig, uses the Accept-Language header value to lookup the right charset encoding when verifying the user's credentials. If the header value is not present in the charset conversion table, a fallback mechanism is used to truncate it to a two characters value to allow a quick retry (for example, 'en-US' is truncated to 'en'). A header value of less than two characters forces an out of bound write of one NUL byte to a memory location that is not part of the string. In the worst case, quite unlikely, the process would crash which could be used as a Denial of Service attack. In the more likely case, this memory is already reserved for future use and the issue has no effect at all.	apache	Unchanged	8.0.0.26	9.0.0.16	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3638
3724	CVE-2017-15672	MEDIUM	High	The read_header function in libavcodec/ffv1dec.c in FFmpeg 3.3.4 and earlier allows remote attackers to have unspecified impact via a crafted MP4 file, which triggers an out-of-bounds read.	ffmpeg	Unchanged	Won't Fix	9.0.0.13	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2477
3725	CVE-2017-15671	Medium	Medium	The glob function in glob.c in the GNU C Library (aka glibc or libc6) before 2.27, when invoked with GLOB_TILDE, could skip freeing allocated memory when processing the ~ operator with a long user name, potentially leading to a denial of service (memory leak).	glibc	Unchanged	8.0.0.25	9.0.0.12	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5629
3726	CVE-2017-15670	High	Critical	The GNU C Library (aka glibc or libc6) before 2.27 contains an off-by-one error leading to a heap-based buffer overflow in the glob function in glob.c, related to the processing of home directories using the ~ operator followed by a long string.	glibc	Unchanged	8.0.0.25	9.0.0.12	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5623
3727	CVE-2017-15652	Medium	MEDIUM	Artifex Ghostscript 9.22 is affected by: Obtain Information. The impact is: obtain sensitive information. The component is: affected source code file, affected function, affected executable, affected libga (imagemagick used that). The attack vector is: Someone must open a postscript file though ghostscript. Because of imagemagick also use libga, so it was affected as well.	ghostscript	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4152
3728	CVE-2017-15650	MEDIUM	High	musl libc before 1.1.17 has a buffer overflow via crafted DNS replies because dns_parse_callback in network/lookup_name.c does not restrict the number of addresses, and thus an attacker can provide an unexpected number by sending A records in a reply to an AAAA query.	musl	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5727
3729	CVE-2017-15649	MEDIUM	High	net/packet/af_packet.c in the Linux kernel before 4.13.6 allows local users to gain privileges via crafted system calls that trigger mishandling of packet_fanout data structures, because of a race condition (involving fanout_add and packet_do_bind) that leads to a use-after-free, a different vulnerability than CVE-2017-6346.	linux	Unchanged	8.0.0.23	9.0.0.13	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5723
3730	CVE-2017-15644	MEDIUM	High	SSRF exists in Webmin 1.850 via the PATH_INFO to tunnel/link.cgi, as demonstrated by a GET request for tunnel/link.cgi/http://INTRANET-IP:8000.	webmin	Unchanged	8.0.0.23	9.0.0.12	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5717
3731	CVE-2017-15642	MEDIUM	Medium	In lsx_aiffstartread in aiff.c in Sound eXchange (SoX) 14.4.2, there is a Use-After-Free vulnerability triggered by supplying a malformed AIFF file.	sox	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5713

	A	B	C	D	E	F	G	H	I	J	K	L	M
3732	CVE-2017-15565	Medium	High	In Poppler 0.59.0, a NULL Pointer Dereference exists in the GfxImageColorMap::getGrayLine() function in GfxState.cc via a crafted PDF document.	poppler	Unchanged	Won't Fix	9.0.0.12	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5690
3733	CVE-2017-15537	LOW	Medium	The x86/fpu (Floating Point Unit) subsystem in the Linux kernel before 4.13.5, when a processor supports the xsave feature but not the xsaves feature, does not correctly handle attempts to set reserved bits in the xstate header via the ptrace() or rt_sigreturn() system call, allowing local users to read the FPU registers of other processes on the system, related to arch/x86/kernel/fpu/regset.c and arch/x86/kernel/fpu/signal.c.	linux	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5712
3734	CVE-2017-15535	MEDIUM	Critical	MongoDB 3.4.x before 3.4.10, and 3.5.x-development, has a disabled-by-default configuration setting, networkMessageCompressors (aka wire protocol compression), which exposes a vulnerability when enabled that could be exploited by a malicious attacker to deny service or modify memory.	mongodb	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2478
3735	CVE-2017-15412	MEDIUM	HIGH	Use after free in libxml2 before 2.9.5, as used in Google Chrome prior to 63.0.3239.84 and other products, allowed a remote attacker to potentially exploit heap corruption via a crafted HTML page.	libxml2	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4634
3736	CVE-2017-15377	MEDIUM	High	In Suricata before 4.x, it was possible to trigger lots of redundant checks on the content of crafted network traffic with a certain signature, because of DetectEngineContentInspection in detect-engine-content-inspection.c. The search engine doesn't stop when it should after no match is found; instead, it stops only upon reaching inspection-recursion-limit (3000 by default).	suricata	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5674
3737	CVE-2017-15372	MEDIUM	Medium	There is a stack-based buffer overflow in the lsx_ms_adpcm_block_expand_i function of adpcm.c in Sound eXchange (SoX) 14.4.2. A Crafted input will lead to a denial of service attack during conversion of an audio file.	sox	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5591
3738	CVE-2017-15371	MEDIUM	Medium	There is a reachable assertion abort in the function sox_append_comment() in formats.c in Sound eXchange (SoX) 14.4.2. A Crafted input will lead to a denial of service attack during conversion of an audio file.	sox	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5534
3739	CVE-2017-15370	MEDIUM	Medium	There is a heap-based buffer overflow in the ImaExpandS function of ima_rw.c in Sound eXchange (SoX) 14.4.2. A Crafted input will lead to a denial of service attack during conversion of an audio file.	sox	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5588
3740	CVE-2017-15365	MEDIUM	High	sql/event_data_objects.cc in MariaDB before 10.1.30 and 10.2.x before 10.2.10 and Percona XtraDB Cluster before 5.6.37-26.21-3 and 5.7.x before 5.7.19-29.22-3 allows remote authenticated users with SQL access to bypass intended access restrictions and replicate data definition language (DDL) statements to cluster nodes by leveraging incorrect ordering of DDL replication and ACL checking.	mariadb	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3190
3741	CVE-2017-15306	MEDIUM	Medium	The kvm_vm_ioctl_check_extension function in arch/powerpc/kvm/powerpc.c in the Linux kernel before 4.13.11 allows local users to cause a denial of service (NULL pointer dereference and system crash) via a KVM_CHECK_EXTENSION KVM_CAP_PPC_HTM ioctl call to /dev/kvm.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2491
3742	CVE-2017-15299	MEDIUM	Medium	The KEYS subsystem in the Linux kernel through 4.13.7 mishandles use of add_key for a key that already exists but is uninstantiated, which allows local users to cause a denial of service (NULL pointer dereference and system crash) or possibly have unspecified other impact via a crafted system call.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5575
3743	CVE-2017-15298	MEDIUM	Medium	Git through 2.14.2 mishandles layers of tree objects, which allows remote attackers to cause a denial of service (memory consumption) via a crafted repository, aka a Git bomb. This can also have an impact of disk consumption; however, an affected process typically would not survive its attempt to build the data structure in memory before writing to disk.	git	Unchanged	8.0.0.30	9.0.0.21	10.17.41.16	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5551
3744	CVE-2017-15289	Low	Medium	The mode4and5 write functions in hw/display/cirrus_vga.c in Qemu allow local OS guest privileged users to cause a denial of service (out-of-bounds write access and Qemu process crash) via vectors related to dst calculation.	qemu	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5706
3745	CVE-2017-15286	MEDIUM	High	SQLite 3.20.1 has a NULL pointer dereference in tableColumnList in shell.c because it fails to consider certain cases where `sqlite3_step(pStmt)==SQLITE_ROW` is false and a data structure is never initialized.	sqlite	Unchanged	Won't Fix	Won't Fix	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5561
3746	CVE-2017-15281	MEDIUM	High	ReadPSDImage in coders/psd.c in ImageMagick 7.0.7-6 allows remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted file, related to Conditional jump or move depends on uninitialised value(s).	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5580
3747	CVE-2017-15277	MEDIUM	Medium	ReadGIFImage in coders/gif.c in ImageMagick 7.0.6-1 and GraphicsMagick 1.3.26 leaves the palette uninitialized when processing a GIF file that has neither a global nor local palette. If the affected product is used as a library loaded into a process that operates on interesting data, this data sometimes can be leaked via the uninitialized palette.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5532
3748	CVE-2017-15275	MEDIUM	High	Samba before 4.7.3 might allow remote attackers to obtain sensitive information by leveraging failure of the server to clear allocated heap memory.	samba	Unchanged	8.0.0.24	9.0.0.13	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2615
3749	CVE-2017-15274	MEDIUM	Medium	security/keys/keyctl.c in the Linux kernel before 4.11.5 does not consider the case of a NULL payload in conjunction with a nonzero length value, which allows local users to cause a denial of service (NULL pointer dereference and OOPS) via a crafted add_key or keyctl system call, a different vulnerability than CVE-2017-12192.	linux	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5521

	A	B	C	D	E	F	G	H	I	J	K	L	M
3750	CVE-2017-15268	MEDIUM	High	Qemu through 2.10.0 allows remote attackers to cause a memory leak by triggering slow data-channel read operations, related to io/channel-websock.c.	qemu	Unchanged	Not vulnerable	9.0.0.12	10.17.41.5	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5537
3751	CVE-2017-15265	Medium	High	Race condition in the ALSA subsystem in the Linux kernel before 4.13.8 allows local users to cause a denial of service (use-after-free) or possibly have unspecified other impact via crafted /dev/snd/seq ioctl calls, related to sound/core/seq/seq_clientmgr.c and sound/core/seq/seq_ports.c.	linux	Unchanged	8.0.0.23	9.0.0.12	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5687
3752	CVE-2017-15232	MEDIUM	Medium	libjpeg-turbo 1.5.2 has a NULL Pointer Dereference in jdpostct.c and jquant1.c via a crafted JPEG file.	libjpeg-turbo	Unchanged	Won't Fix	Vulnerable	Investigate	Investigate	Investigate	Not vulnerable	LIN9-5603
3753	CVE-2017-15228	Medium	High	Irssi before 1.0.5, when installing themes with unterminated colour formatting sequences, may access data beyond the end of the string.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5698
3754	CVE-2017-15227	Medium	High	Irssi before 1.0.5, while waiting for the channel synchronisation, may incorrectly fail to remove destroyed channels from the query list, resulting in use-after-free conditions when updating the state later on.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5688
3755	CVE-2017-15225	MEDIUM	Medium	_bfd_dwarf2_cleanup_debug_info in dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, allows remote attackers to cause a denial of service (memory leak) via a crafted ELF file.	binutils	Unchanged	8.0.0.25	9.0.0.12	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5566
3756	CVE-2017-15218	MEDIUM	Medium	ImageMagick 7.0.7-2 has a memory leak in ReadOneJNGImage in coders/png.c.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5593
3757	CVE-2017-15217	MEDIUM	Medium	ImageMagick 7.0.7-2 has a memory leak in ReadSGIImage in coders/sgi.c.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5515
3758	CVE-2017-15193	HIGH	High	In Wireshark 2.4.0 to 2.4.1 and 2.2.0 to 2.2.9, the MBIM dissector could crash or exhaust system memory. This was addressed in epan/dissectors/packet-mbim.c by changing the memory-allocation approach.	wireshark	Unchanged	Not vulnerable	9.0.0.13	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5592
3759	CVE-2017-15192	MEDIUM	High	In Wireshark 2.4.0 to 2.4.1 and 2.2.0 to 2.2.9, the BT ATT dissector could crash. This was addressed in epan/dissectors/packet-btatt.c by considering a case where not all of the BTATT packets have the same encapsulation level.	wireshark	Unchanged	Not vulnerable	9.0.0.13	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5584
3760	CVE-2017-15191	MEDIUM	High	In Wireshark 2.4.0 to 2.4.1, 2.2.0 to 2.2.9, and 2.0.0 to 2.0.15, the DMP dissector could crash. This was addressed in epan/dissectors/packet-dmp.c by validating a string length.	wireshark	Unchanged	8.0.0.28	9.0.0.13	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5606
3761	CVE-2017-15190	MEDIUM	High	In Wireshark 2.4.0 to 2.4.1, the RTSP dissector could crash. This was addressed in epan/dissectors/packet-rtsp.c by correcting the scope of a variable.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5523
3762	CVE-2017-15189	MEDIUM	High	In Wireshark 2.4.0 to 2.4.1, the DOCSIS dissector could go into an infinite loop. This was addressed in plugins/docsis/packet-docsis.c by adding decrements.	wireshark	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5539
3763	CVE-2017-15186	MEDIUM	Medium	Double free vulnerability in FFmpeg 3.3.4 and earlier allows remote attackers to cause a denial of service via a crafted AVI file.	ffmpeg	Unchanged	Not vulnerable	9.0.0.14	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5721
3764	CVE-2017-15132	MEDIUM	High	A flaw was found in dovecot 2.0 up to 2.2.33 and 2.3.0. An abort of SASL authentication results in a memory leak in dovecot's auth client used by login processes. The leak has impact in high performance configuration where same login processes are reused and can cause the process to crash due to memory exhaustion.	dovecot	Unchanged	8.0.0.25	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3191
3765	CVE-2017-15130	MEDIUM	MEDIUM	A denial of service flaw was found in dovecot before 2.2.34. An attacker able to generate random SNI server names could exploit TLS SNI configuration lookups, leading to excessive memory usage and the process to restart.	dovecot	Unchanged	8.0.0.26	9.0.0.16	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3566
3766	CVE-2017-15129	MEDIUM	Medium	A use-after-free vulnerability was found in network namespaces code affecting the Linux kernel before 4.14.11. The function get_net_ns_by_id() in net/core/net_namespace.c does not check for the net::count value after it has found a peer network in netns_ids idr, which could lead to double free and memory corruption. This vulnerability could allow an unprivileged local user to induce kernel memory corruption on the system, leading to a crash. Due to the nature of the flaw, privilege escalation cannot be fully ruled out, although it is thought to be unlikely.	linux	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3061
3767	CVE-2017-15128	MEDIUM	Medium	A flaw was found in the hugetlb_mcopy_atomic_pte function in mm/hugetlb.c in the Linux kernel before 4.13.12. A lack of size check could cause a denial of service (BUG).	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3079
3768	CVE-2017-15127	MEDIUM	Medium	A flaw was found in the hugetlb_mcopy_atomic_pte function in mm/hugetlb.c in the Linux kernel before 4.13. A superfluous implicit page unlock for VM_SHARED hugetlbfs mapping could trigger a local denial of service (BUG).	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3075
3769	CVE-2017-15126	HIGH	High	A use-after-free flaw was found in fs/userfaultfd.c in the Linux kernel before 4.13.6. The issue is related to the handling of fork failure when dealing with event messages. Failure to fork correctly can lead to a situation where a fork event will be removed from an already freed list of events with userfaultfd_ctx_put().	linux	Unchanged	Not vulnerable	Not vulnerable	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3064
3770	CVE-2017-15124	HIGH	High	VNC server implementation in Quick Emulator (QEMU) before 2.14.3 was found to be vulnerable to an unbounded memory allocation issue, as it did not throttle the framebuffer updates sent to its client. If the client did not consume these updates, VNC server allocates growing memory to hold onto this data. A malicious remote VNC client could use this flaw to cause DoS to the server host.	qemu	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3104
3771	CVE-2017-15119	MEDIUM	HIGH	Quick Emulator(Qemu) built with the Network Block Device(NBD) server support is vulnerable to a denial-of-service issue. It could occur if a client sent large option requests, making server waste CPU time on reading up to 4G bytes.	qemu	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4230
3772	CVE-2017-15118	HIGH	CRITICAL	A stack-based buffer overflow vulnerability was found in NBD server implementation in qemu allowing client to request an export name of size up to 4096 bytes, which in fact should be limited to 256 bytes, allowing to cause out-of-bounds stack write in qemu process.	qemu	Unchanged	Not vulnerable	Not vulnerable	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4196

	A	B	C	D	E	F	G	H	I	J	K	L	M
3773	CVE-2017-15116	MEDIUM	Medium	The rngapi_reset function in crypto/rng.c in the Linux kernel before 4.2 allows attackers to cause a denial of service (NULL pointer dereference).	linux	Unchanged	8.0.0.25	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2675
3774	CVE-2017-15115	HIGH	High	The sctp_do_peeloff function in net/sctp/socket.c in the Linux kernel before 4.14 does not check whether the intended netns is used in a peel-off action, which allows local users to cause a denial of service (use-after-free and system crash) or possibly have unspecified other impact via crafted system calls.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2584
3775	CVE-2017-15107	MEDIUM	High	A vulnerability was found in the implementation of DNSSEC in Dnsmasq up to and including 2.78. Wildcard synthesized NSEC records could be improperly interpreted to prove the non-existence of hostnames that actually exist.	dnsmasq	Updated	8.0.0.25	9.0.0.25	10.17.41.20	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3216
3776	CVE-2017-15102	MEDIUM	Medium	The tower_probe function in drivers/usb/misc/legousbtower.c in the Linux kernel before 4.8.1 allows local users (who are physically proximate for inserting a crafted USB device) to gain privileges by leveraging a write-what-where condition that occurs after a race condition and a NULL pointer dereference.	linux	Unchanged	8.0.0.24	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2583
3777	CVE-2017-15099	MEDIUM	Medium	INSERT ... ON CONFLICT DO UPDATE commands in PostgreSQL 10.x before 10.1, 9.6.x before 9.6.6, and 9.5.x before 9.5.10 disclose table contents that the invoker lacks privilege to read. These exploits affect only tables where the attacker lacks full read access but has both INSERT and UPDATE privileges. Exploits bypass row level security policies and lack of SELECT privilege.	postgresql	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2668
3778	CVE-2017-15098	MEDIUM	High	Invalid json_populate_recordset or jsonb_populate_recordset function calls in PostgreSQL 10.x before 10.1, 9.6.x before 9.6.6, 9.5.x before 9.5.10, 9.4.x before 9.4.15, and 9.3.x before 9.3.20 can crash the server or disclose a few bytes of server memory.	postgresql	Unchanged	8.0.0.24	9.0.0.13	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2625
3779	CVE-2017-15096	LOW	Low	A flaw was found in GlusterFS in versions prior to 3.10. A null pointer dereference in send_brick_req function in glusterfsd/src/gf_attach.c may be used to cause denial of service.	glusterfs	Unchanged	Not vulnerable	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5680
3780	CVE-2017-15088	HIGH	Critical	plugins/preauth/pkinit/pkinit_crypto_openssl.c in MIT Kerberos 5 (aka krb5) through 1.15.2 mishandles Distinguished Name (DN) fields, which allows remote attackers to execute arbitrary code or cause a denial of service (buffer overflow and application crash) in situations involving untrusted X.509 data, related to the get_matching_data and X509_NAME_oneline_ex functions. NOTE: this has security relevance only in use cases outside of the MIT Kerberos distribution, e.g., the use of get_matching_data in KDC certauth plugin code that is specific to Red Hat.	krb5	Unchanged	8.0.0.25	9.0.0.14	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2607
3781	CVE-2017-15047	HIGH	Critical	The clusterLoadConfig function in cluster.c in Redis 4.0.2 allows attackers to cause a denial of service (out-of-bounds array index and application crash) or possibly have unspecified other impact by leveraging limited access to the machine.	redis	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5601
3782	CVE-2017-15046	MEDIUM	Medium	LAME 3.99.5 has a stack-based buffer overflow in unpack_read_samples in frontend/get_audio.c, a different vulnerability than CVE-2017-9412.	lame	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5582
3783	CVE-2017-15045	MEDIUM	Medium	LAME 3.99.5 has a heap-based buffer over-read in fill_buffer in libmp3lame/util.c, related to lame_encode_buffer_sample_t in libmp3lame/lame.c, a different vulnerability than CVE-2017-9410.	lame	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5559
3784	CVE-2017-15042	MEDIUM	Medium	An unintended cleartext issue exists in Go before 1.8.4 and 1.9.x before 1.9.1. RFC 4954 requires that, during SMTP, the PLAIN auth scheme must only be used on network connections secured with TLS. The original implementation of smtp.PlainAuth in Go 1.0 enforced this requirement, and it was documented to do so. In 2013, upstream issue #5184, this was changed so that the server may decide whether PLAIN is acceptable. The result is that if you set up a man-in-the-middle SMTP server that doesn't advertise STARTTLS and does advertise that PLAIN auth is OK, the smtp.PlainAuth implementation sends the username and password.	go	Unchanged	Not vulnerable	Won't Fix	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5549
3785	CVE-2017-15041	HIGH	Critical	Go before 1.8.4 and 1.9.x before 1.9.1 allows go get remote command execution. Using custom domains, it is possible to arrange things so that example.com/pkg1 points to a Subversion repository but example.com/pkg1/pkg2 points to a Git repository. If the Subversion repository includes a Git checkout in its pkg2 directory and some other work is done to ensure the proper ordering of operations, go get can be tricked into reusing this Git checkout for the fetch of code from pkg2. If the Subversion repository's Git checkout has malicious commands in .git/hooks/, they will execute on the system running go get.	go	Unchanged	Not vulnerable	Won't Fix	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5538
3786	CVE-2017-15038	LOW	Medium	Race condition in the v9fs_xattrwalk function in hw/9pfs/9p.c in QEMU (aka Quick Emulator) allows local guest OS users to obtain sensitive information from host heap memory via vectors related to reading extended attributes.	qemu	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5524
3787	CVE-2017-15033	MEDIUM	High	ImageMagick version 7.0.7-2 contains a memory leak in ReadYUVImage in coders/yuv.c.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5527
3788	CVE-2017-15032	HIGH	Critical	ImageMagick version 7.0.7-2 contains a memory leak in ReadYCBCRImage in coders/ycbcr.c.	imagemagick	Unchanged	Not vulnerable	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5558
3789	CVE-2017-15025	MEDIUM	Medium	decode_line_info in dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, allows remote attackers to cause a denial of service (divide-by-zero error and application crash) via a crafted ELF file.	binutils	Unchanged	8.0.0.25	9.0.0.12	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5530
3790	CVE-2017-15024	MEDIUM	Medium	find_abstract_instance_name in dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, allows remote attackers to cause a denial of service (infinite recursion and application crash) via a crafted ELF file.	binutils	Unchanged	8.0.0.25	9.0.0.12	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5589

	A	B	C	D	E	F	G	H	I	J	K	L	M
3791	CVE-2017-15023	MEDIUM	Medium	read_formatted_entries in dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, does not properly validate the format count, which allows remote attackers to cause a denial of service (NULL pointer dereference and application crash) via a crafted ELF file, related to concat_filename.	binutils	Unchanged	Not vulnerable	Not vulnerable	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5543
3792	CVE-2017-15022	MEDIUM	Medium	dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, does not validate the DW_AT_name data type, which allows remote attackers to cause a denial of service (bfd_hash_hash NULL pointer dereference, or out-of-bounds access, and application crash) via a crafted ELF file, related to scan_unit_for_symbols and parse_comp_unit.	binutils	Unchanged	8.0.0.25	9.0.0.12	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5605
3793	CVE-2017-15021	MEDIUM	Medium	bfd_get_debug_link_info_1 in opncls.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted ELF file, related to bfd_getl32.	binutils	Unchanged	8.0.0.25	9.0.0.12	10.17.41.8	Vulnerable	Vulnerable	Vulnerable	LIN9-5598
3794	CVE-2017-15020	MEDIUM	High	dwarf1.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, mishandles pointers, which allows remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted ELF file, related to parse_die and parse_line_table, as demonstrated by a parse_die heap-based buffer over-read.	binutils	Unchanged	8.0.0.25	9.0.0.12	10.17.41.8	Vulnerable	Vulnerable	Vulnerable	LIN9-5583
3795	CVE-2017-15019	MEDIUM	High	LAME 3.99.5 has a NULL Pointer Dereference in the hip_decode_init function within libmp3lame/mpglib_interface.c via a malformed mpg file, because of an incorrect calloc call.	lame	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5570
3796	CVE-2017-15018	MEDIUM	Medium	LAME 3.99.5 has a heap-based buffer over-read when handling a malformed file in k_34_4 in vbrquantize.c.	lame	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5562

3813	CVE-2017-14933	Medium	Medium	read_formatted_entries in dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, allows remote attackers to cause a denial of service (infinite loop) via a crafted ELF file.	binutils	Unchanged	Not vulnerable	Not vulnerable	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5594
3814	CVE-2017-14932	Medium	Medium	decode_line_info in dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, allows remote attackers to cause a denial of service (infinite loop) via a crafted ELF file.	binutils	Unchanged	8.0.0.25	9.0.0.12	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5546
3815	CVE-2017-14930	High	Medium	Memory leak in decode_line_info in dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, allows remote attackers to cause a denial of service (memory consumption) via a crafted ELF file.	binutils	Unchanged	8.0.0.25	9.0.0.12	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5529
3816	CVE-2017-14929	Medium	High	In Poppler 0.59.0, memory corruption occurs in a call to Object::dictLookup() in Object.h after a repeating series of Gfx::display, Gfx::go, Gfx::execOp, Gfx::opFill, Gfx::doPatternFill, Gfx::doTilingPatternFill and Gfx::drawForm calls (aka a Gfx.cc infinite loop), a different vulnerability than CVE-2017-14519.	poppler	Unchanged	Won't Fix	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5600
3817	CVE-2017-14928	Medium	Medium	In Poppler 0.59.0, a NULL Pointer Dereference exists in AnnotRichMedia::Configuration::Configuration in Annot.cc via a crafted PDF document.	poppler	Unchanged	Won't Fix	9.0.0.12	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5536
3818	CVE-2017-14927	Medium	Medium	In Poppler 0.59.0, a NULL Pointer Dereference exists in the SplashOutputDev::type3D0() function in SplashOutputDev.cc via a crafted PDF document.	poppler	Unchanged	Won't Fix	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5568
3819	CVE-2017-14926	Medium	Medium	In Poppler 0.59.0, a NULL Pointer Dereference exists in AnnotRichMedia::Content::Content in Annot.cc via a crafted PDF document.	poppler	Unchanged	Won't Fix	9.0.0.12	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5579
3820	CVE-2017-14867	HIGH	High	Git before 2.10.5, 2.11.x before 2.11.4, 2.12.x before 2.12.5, 2.13.x before 2.13.6, and 2.14.x before 2.14.2 uses unsafe Perl scripts to support subcommands such as cvsserver, which allows attackers to execute arbitrary OS commands via shell metacharacters in a module name. The vulnerable code is reachable via git-shell even without CVS support.	git	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5560
3821	CVE-2017-14767	Medium	High	The sdp_parse_fmtp_config_h264 function in libavformat/rtpdec_h264.c in FFmpeg before 3.3.4 mishandles empty sprop-parameter-sets values, which allows remote attackers to cause a denial of service (heap buffer overflow) or possibly have unspecified other impact via a crafted sdp file.	ffmpeg	Unchanged	Not vulnerable	9.0.0.12	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5602
3822	CVE-2017-14746	HIGH	Critical	Use-after-free vulnerability in Samba 4.x before 4.7.3 allows remote attackers to execute arbitrary code via a crafted SMB1 request.	samba	Unchanged	8.0.0.24	9.0.0.13	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2624
3823	CVE-2017-14745	Medium	High	The *_get_synthetic_symtab functions in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, interpret a -1 value as a sorting count instead of an error flag, which allows remote attackers to cause a denial of service (integer overflow and application crash) or possibly have unspecified other impact via a crafted ELF file, related to elf32-i386.c and elf64-x86-64.c.	binutils	Unchanged	Not vulnerable	Not vulnerable	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5604
3824	CVE-2017-14741	MEDIUM	Medium	The ReadCAPTIONImage function in coders/caption.c in ImageMagick 7.0.7-3 allows remote attackers to cause a denial of service (infinite loop) via a crafted font file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5452
3825	CVE-2017-14739	MEDIUM	High	The AcquireResampleFilterThreadSet function in magick/resample-private.h in ImageMagick 7.0.7-4 mishandles failed memory allocation, which allows remote attackers to cause a denial of service (NULL Pointer Dereference in DistortImage in MagickCore/distort.c, and application crash) via unspecified vectors.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5456
3826	CVE-2017-14729	MEDIUM	High	The *_get_synthetic_symtab functions in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, do not ensure a unique PLT entry for a symbol, which allows remote attackers to cause a denial of service (heap-based buffer overflow and application crash) or possibly have unspecified other impact via a crafted ELF file, related to elf32-i386.c and elf64-x86-64.c.	binutils	Unchanged	Not vulnerable	Not vulnerable	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5445
3827	CVE-2017-14696	MEDIUM	High	SaltStack Salt before 2016.3.8, 2016.11.x before 2016.11.8, and 2017.7.x before 2017.7.2 allows remote attackers to cause a denial of service via a crafted authentication request.	salt	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5704
3828	CVE-2017-14695	HIGH	Critical	Directory traversal vulnerability in minion id validation in SaltStack Salt before 2016.3.8, 2016.11.x before 2016.11.8, and 2017.7.x before 2017.7.2 allows remote minions with incorrect credentials to authenticate to a master via a crafted minion ID. NOTE: this vulnerability exists because of an incomplete fix for CVE-2017-12791.	salt	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5696
3829	CVE-2017-14684	HIGH	Medium	In ImageMagick 7.0.7-4 Q16, a memory leak vulnerability was found in the function ReadVIPSImage in coders/vips.c, which allows attackers to cause a denial of service (memory consumption in ResizeMagickMemory in MagickCore/memory.c) via a crafted file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5432
3830	CVE-2017-14682	MEDIUM	High	GetNextToken in MagickCore/token.c in ImageMagick 7.0.6 allows remote attackers to cause a denial of service (heap-based buffer overflow and application crash) or possibly have unspecified other impact via a crafted SVG document, a different vulnerability than CVE-2017-10928.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5468

	A	B	C	D	E	F	G	H	I	J	K	L	M
3831	CVE-2017-14634	MEDIUM	Medium	In libsndfile 1.0.28, a divide-by-zero error exists in the function double64_init() in double64.c, which may lead to DoS when playing a crafted audio file.	libsndfile	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	10.19.45.1	Not vulnerable	LIN9-5448
3832	CVE-2017-14633	MEDIUM	Medium	In Xiph.Org libvorbis 1.3.5, an out-of-bounds array read vulnerability exists in the function mapping0_forward() in mapping0.c, which may lead to DoS when operating on a crafted audio file with vorbis_analysis().	libvorbis	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5449
3833	CVE-2017-14632	HIGH	Critical	Xiph.Org libvorbis 1.3.5 allows Remote Code Execution upon freeing uninitialized memory in the function vorbis_analysis_headerout() in info.c when vi->channels<=0, a similar issue to Mozilla bug 550184.	libvorbis	Unchanged	8.0.0.25	9.0.0.14	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5442
3834	CVE-2017-14626	HIGH	Critical	ImageMagick 7.0.7-0 Q16 has a NULL Pointer Dereference vulnerability in the function sixel_decode in coders/sixel.c.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5463
3835	CVE-2017-14625	HIGH	Critical	ImageMagick 7.0.7-0 Q16 has a NULL Pointer Dereference vulnerability in the function sixel_output_create in coders/sixel.c.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5457
3836	CVE-2017-14624	HIGH	Critical	ImageMagick 7.0.7-0 Q16 has a NULL Pointer Dereference vulnerability in the function PostscriptDelegateMessage in coders/ps.c.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5473
3837	CVE-2017-14617	MEDIUM	High	In Poppler 0.59.0, a floating point exception occurs in the ImageStream class in Stream.cc, which may lead to a potential attack when handling malicious PDF files.	poppler	Unchanged	Won't Fix	9.0.0.11	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5467
3838	CVE-2017-14607	MEDIUM	High	In ImageMagick 7.0.7-4 Q16, an out of bounds read flaw related to ReadTIFFImage has been reported in coders/tiff.c. An attacker could possibly exploit this flaw to disclose potentially sensitive memory or cause an application crash.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5446
3839	CVE-2017-14604	MEDIUM	Medium	GNOME Nautilus before 3.23.90 allows attackers to spoof a file type by using the .desktop file extension, as demonstrated by an attack in which a .desktop file's Name field ends in .pdf but this file's Exec field launches a malicious sh -c command. In other words, Nautilus provides no UI indication that a file actually has the potentially unsafe .desktop extension; instead, the UI only shows the .pdf extension. One (slightly) mitigating factor is that an attack requires the .desktop file to have execute permission. The solution is to ask the user to confirm that the file is supposed to be treated as a .desktop file, and then remember the user's answer in the metadata::trusted field.	nautilus	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5472
3840	CVE-2017-14533	Medium	Medium	ImageMagick 7.0.6-6 has a memory leak in ReadMATImage in coders/mat.c.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5441
3841	CVE-2017-14532	High	Critical	ImageMagick 7.0.7-0 has a NULL Pointer Dereference in TIFFIgnoreTags in coders/tiff.c.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5465
3842	CVE-2017-14531	High	Medium	ImageMagick 7.0.7-0 has a memory exhaustion issue in ReadSUNImage in coders/sun.c.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5455
3843	CVE-2017-14529	Medium	Medium	The pe_print_idata function in peXXigen.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, mishandles HintName vector entries, which allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted PE file, related to the bfd_getl16 function.	binutils	Unchanged	8.0.0.25	9.0.0.12	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5464
3844	CVE-2017-14528	Medium	Medium	The TIFFSetProfiles function in coders/tiff.c in ImageMagick 7.0.6 has incorrect expectations about whether LibTIFF TIFFGetField return values imply that data validation has occurred, which allows remote attackers to cause a denial of service (use-after-free after an invalid call to TIFFSetField, and application crash) via a crafted file.	imagemagick	Unchanged	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5469
3845	CVE-2017-14520	Medium	High	In Poppler 0.59.0, a floating point exception occurs in Splash::scaleImageYuXd() in Splash.cc, which may lead to a potential attack when handling malicious PDF files.	poppler	Unchanged	Won't Fix	9.0.0.11	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5427
3846	CVE-2017-14519	Medium	High	In Poppler 0.59.0, memory corruption occurs in a call to Object::streamGetChar in Object.h after a repeating series of Gfx::display, Gfx::go, Gfx::execOp, Gfx::opShowText, and Gfx::doShowText calls (aka a Gfx.cc infinite loop).	poppler	Unchanged	Won't Fix	9.0.0.11	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5460
3847	CVE-2017-14518	Medium	High	In Poppler 0.59.0, a floating point exception exists in the isImageInterpolationRequired() function in Splash.cc via a crafted PDF document.	poppler	Unchanged	Won't Fix	9.0.0.11	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5461
3848	CVE-2017-14517	Medium	Medium	In Poppler 0.59.0, a NULL Pointer Dereference exists in the XRef::parseEntry() function in XRef.cc via a crafted PDF document.	poppler	Unchanged	Won't Fix	9.0.0.11	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5450
3849	CVE-2017-14505	Medium	Medium	DrawGetStrokeDashArray in wand/drawing-wand.c in ImageMagick 7.0.7-1 mishandles certain NULL arrays, which allows attackers to perform Denial of Service (NULL pointer dereference and application crash in AcquireQuantumMemory within MagickCore/memory.c) by providing a crafted Image File as input.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5453
3850	CVE-2017-14503	Medium	Medium	libarchive 3.3.2 suffers from an out-of-bounds read within lha_read_data_none() in archive_read_support_format_lha.c when extracting a specially crafted lha archive, related to lha_crc16.	libarchive	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5426
3851	CVE-2017-14502	Medium	High	read_header in archive_read_support_format_rar.c in libarchive 3.3.2 suffers from an off-by-one error for UTF-16 names in RAR archives, leading to an out-of-bounds read in archive_read_format_rar_read_header.	libarchive	Unchanged	8.0.0.22	9.0.0.11	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5429
3852	CVE-2017-14501	Medium	Medium	An out-of-bounds read flaw exists in parse_file_info in archive_read_support_format_iso9660.c in libarchive 3.3.2 when extracting a specially crafted iso9660 iso file, related to archive_read_format_iso9660_read_header.	libarchive	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5451
3853	CVE-2017-14497	High	High	The tpacket_rcv function in net/packet/af_packet.c in the Linux kernel before 4.13 mishandles vnet headers, which might allow local users to cause a denial of service (buffer overflow, and disk and memory corruption) or possibly have unspecified other impact via crafted system calls.	linux	Unchanged	Not vulnerable	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5462

	A	B	C	D	E	F	G	H	I	J	K	L	M
3854	CVE-2017-14496	HIGH	High	Integer underflow in the add_pseudoheader function in dnsmasq before 2.78 , when the --add-mac, --add-cpe-id or --add-subnet option is specified, allows remote attackers to cause a denial of service via a crafted DNS request.	dnsmasq	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5502
3855	CVE-2017-14495	MEDIUM	High	Memory leak in dnsmasq before 2.78, when the --add-mac, --add-cpe-id or --add-subnet option is specified, allows remote attackers to cause a denial of service (memory consumption) via vectors involving DNS response creation.	dnsmasq	Unchanged	Not vulnerable	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5501
3856	CVE-2017-14494	MEDIUM	Medium	dnsmasq before 2.78, when configured as a relay, allows remote attackers to obtain sensitive memory information via vectors involving handling DHCPv6 forwarded requests.	dnsmasq	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5500
3857	CVE-2017-14493	HIGH	Critical	Stack-based buffer overflow in dnsmasq before 2.78 allows remote attackers to cause a denial of service (crash) or execute arbitrary code via a crafted DHCPv6 request.	dnsmasq	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5499
3858	CVE-2017-14492	HIGH	Critical	Heap-based buffer overflow in dnsmasq before 2.78 allows remote attackers to cause a denial of service (crash) or execute arbitrary code via a crafted IPv6 router advertisement request.	dnsmasq	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5498
3859	CVE-2017-14491	HIGH	Critical	Heap-based buffer overflow in dnsmasq before 2.78 allows remote attackers to cause a denial of service (crash) or execute arbitrary code via a crafted DNS response.	dnsmasq	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5497
3860	CVE-2017-14489	Medium	Medium	The iscsi_if_rx function in drivers/scsi/scsi_transport_iscsi.c in the Linux kernel through 4.13.2 allows local users to cause a denial of service (panic) by leveraging incorrect length validation.	linux	Unchanged	8.0.0.23	9.0.0.11	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5438
3861	CVE-2017-14482	MEDIUM	High	GNU Emacs before 25.3 allows remote attackers to execute arbitrary code via email with crafted Content-Type: text/enriched data containing an x-display XML element that specifies execution of shell commands, related to an unsafe text/enriched extension in lisp/textmodes/enriched.el, and unsafe Gnus support for enriched and richtext inline MIME objects in lisp/gnus/mm-view.el. In particular, an Emacs user can be instantly compromised by reading a crafted email message (or Usenet news article).	emacs	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5444
3862	CVE-2017-14461	MEDIUM	HIGH	A specially crafted email delivered over SMTP and passed on to Dovecot by MTA can trigger an out of bounds read resulting in potential sensitive information disclosure and denial of service. In order to trigger this vulnerability, an attacker needs to send a specially crafted email message to the server.	dovecot	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3529
3863	CVE-2017-14400	MEDIUM	Medium	In ImageMagick 7.0.7-1 Q16, the PersistPixelCache function in magick/cache.c mishandles the pixel cache nexus, which allows remote attackers to cause a denial of service (NULL pointer dereference in the function GetVirtualPixels in MagickCore/cache.c) via a crafted file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5347
3864	CVE-2017-14343	MEDIUM	Medium	ImageMagick 7.0.6-6 has a memory leak vulnerability in ReadXCFImage in coders/xcf.c via a crafted xcf image file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5395
3865	CVE-2017-14342	MEDIUM	Medium	ImageMagick 7.0.6-6 has a memory exhaustion vulnerability in ReadWPGImage in coders/wpg.c via a crafted wpg image file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5371
3866	CVE-2017-14341	HIGH	Medium	ImageMagick 7.0.6-6 has a large loop vulnerability in ReadWPGImage in coders/wpg.c, causing CPU exhaustion via a crafted wpg image file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5394
3867	CVE-2017-14340	MEDIUM	Medium	The XFS_IS_REALTIME_INODE macro in fs/xfs/xfs_linux.h in the Linux kernel before 4.13.2 does not verify that a filesystem has a realtime device, which allows local users to cause a denial of service (NULL pointer dereference and OOPS) via vectors related to setting an RHINHERIT flag on a directory.	linux	Unchanged	8.0.0.23	9.0.0.11	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5458
3868	CVE-2017-14333	MEDIUM	High	The process_version_sections function in readelf.c in GNU Binutils 2.29 allows attackers to cause a denial of service (Integer Overflow, and hang because of a time-consuming loop) or possibly have unspecified other impact via a crafted binary file with invalid values of ent.vn_next, during readelf -a execution.	binutils	Unchanged	8.0.0.25	9.0.0.14	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5377
3869	CVE-2017-14326	MEDIUM	Medium	In ImageMagick 7.0.7-1 Q16, a memory leak vulnerability was found in the function ReadMATImage in coders/mat.c, which allows attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5298
3870	CVE-2017-14325	HIGH	Medium	In ImageMagick 7.0.7-1 Q16, a memory leak vulnerability was found in the function PersistPixelCache in magick/cache.c, which allows attackers to cause a denial of service (memory consumption in ReadMPCImage in coders/mpc.c) via a crafted file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5210
3871	CVE-2017-14324	MEDIUM	Medium	In ImageMagick 7.0.7-1 Q16, a memory leak vulnerability was found in the function ReadMPCImage in coders/mpc.c, which allows attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5263
3872	CVE-2017-14266	MEDIUM	High	tcprewrite in Tcpreplay 3.4.4 has a Heap-Based Buffer Overflow vulnerability triggered by a crafted PCAP file.	tcpreplay	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5305
3873	CVE-2017-14249	MEDIUM	Medium	ImageMagick 7.0.6-8 Q16 mishandles EOF checks in ReadMPCImage in coders/mpc.c, leading to division by zero in GetPixelCacheTileSize in MagickCore/cache.c, allowing remote attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5348
3874	CVE-2017-14248	MEDIUM	Medium	A heap-based buffer over-read in SampleImage() in MagickCore/resize.c in ImageMagick 7.0.6-8 Q16 allows remote attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	Not vulnerable	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5212
3875	CVE-2017-14246	MEDIUM	High	An out of bounds read in the function d2ulaw_array() in ulaw.c of libsndfile 1.0.28 may lead to a remote DoS attack or information disclosure, related to mishandling of the NAN and INFINITY floating-point values.	libsndfile	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5430
3876	CVE-2017-14245	MEDIUM	High	An out of bounds read in the function d2alaw_array() in alaw.c of libsndfile 1.0.28 may lead to a remote DoS attack or information disclosure, related to mishandling of the NAN and INFINITY floating-point values.	libsndfile	Unchanged	8.0.0.28	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5435

	A	B	C	D	E	F	G	H	I	J	K	L	M
3877	CVE-2017-14229	MEDIUM	High	There is an infinite loop in the jpc_dec_tileinit function in jpc/jpc_dec.c of Jasper 2.0.13. It will lead to a remote denial of service attack.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5254
3878	CVE-2017-14228	MEDIUM	High	In Netwide Assembler (NASM) 2.14rc0, there is an illegal address access in the function paste_tokens() in preproc.c, aka a NULL pointer dereference. It will lead to remote denial of service.	nasm	Unchanged	8.0.0.23	9.0.0.12	10.17.41.3	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5246
3879	CVE-2017-14227	MEDIUM	High	In MongoDB libbson 1.7.0, the bson_iter_codewscope function in bson-iter.c miscalculates a bson_utf8_validate length argument, which allows remote attackers to cause a denial of service (heap-based buffer over-read in the bson_utf8_validate function in bson-utf8.c), as demonstrated by bson-to-json.c.	mongodb	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5345
3880	CVE-2017-14225	MEDIUM	High	The av_color_primaries_name function in libavutil/pixdesc.c in FFmpeg 3.3.3 may return a NULL pointer depending on a value contained in a file, but callers do not anticipate this, as demonstrated by the avcodec_string function in libavcodec/utils.c, leading to a NULL pointer dereference. (It is also conceivable that there is security relevance for a NULL pointer dereference in av_color_primaries_name calls within the ffprobe command-line program.)	ffmpeg	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5383
3881	CVE-2017-14224	MEDIUM	High	A heap-based buffer overflow in WritePCXImage in coders/pcx.c in ImageMagick 7.0.6-8 Q16 allows remote attackers to cause a denial of service or code execution via a crafted file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5243
3882	CVE-2017-14223	HIGH	Medium	In libavformat/asfdec_f.c in FFmpeg 3.3.3, a DoS in asf_build_simple_index() due to lack of an EOF (End of File) check might cause huge CPU consumption. When a crafted ASF file, which claims a large ict field in the header but does not contain sufficient backing data, is provided, the for loop would consume huge CPU and memory resources, since there is no EOF check inside the loop.	ffmpeg	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5301
3883	CVE-2017-14222	HIGH	Medium	In libavformat/mov.c in FFmpeg 3.3.3, a DoS in read_tfra() due to lack of an EOF (End of File) check might cause huge CPU and memory consumption. When a crafted MOV file, which claims a large item_count field in the header but does not contain sufficient backing data, is provided, the loop would consume huge CPU and memory resources, since there is no EOF check inside the loop.	ffmpeg	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5349
3884	CVE-2017-14175	High	Medium	In coders/xbm.c in ImageMagick 7.0.6-1 Q16, a DoS in ReadXBMImage() due to lack of an EOF (End of File) check might cause huge CPU consumption. When a crafted XBM file, which claims large rows and columns fields in the header but does not contain sufficient backing data, is provided, the loop over the rows would consume huge CPU resources, since there is no EOF check inside the loop.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5247
3885	CVE-2017-14174	High	Medium	In coders/psd.c in ImageMagick 7.0.7-0 Q16, a DoS in ReadPSDLayersInternal() due to lack of an EOF (End of File) check might cause huge CPU consumption. When a crafted PSD file, which claims a large length field in the header but does not contain sufficient backing data, is provided, the loop over length would consume huge CPU resources, since there is no EOF check inside the loop.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5252
3886	CVE-2017-14173	Medium	Medium	In the function ReadTXTImage() in coders/txt.c in ImageMagick 7.0.6-10, an integer overflow might occur for the addition operation GetQuantumRange(depth)+1 when depth is large, producing a smaller value than expected. As a result, an infinite loop would occur for a crafted TXT file that claims a very large max_value value.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5351
3887	CVE-2017-14172	High	Medium	In coders/ps.c in ImageMagick 7.0.7-0 Q16, a DoS in ReadPSImage() due to lack of an EOF (End of File) check might cause huge CPU consumption. When a crafted PSD file, which claims a large extent field in the header but does not contain sufficient backing data, is provided, the loop over length would consume huge CPU resources, since there is no EOF check inside the loop.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5325
3888	CVE-2017-14171	High	Medium	In libavformat/nsvdec.c in FFmpeg 3.3.3, a DoS in nsv_parse_NSVf_header() due to lack of an EOF (End of File) check might cause huge CPU consumption. When a crafted NSV file, which claims a large table_entries_used field in the header but does not contain sufficient backing data, is provided, the loop over 'table_entries_used' would consume huge CPU resources, since there is no EOF check inside the loop.	ffmpeg	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5284
3889	CVE-2017-14170	High	Medium	In libavformat/mxfdec.c in FFmpeg 3.3.3, a DoS in mxf_read_index_entry_array() due to lack of an EOF (End of File) check might cause huge CPU consumption. When a crafted MXF file, which claims a large nb_index_entries field in the header but does not contain sufficient backing data, is provided, the loop would consume huge CPU resources, since there is no EOF check inside the loop. Moreover, this big loop can be invoked multiple times if there is more than one applicable data segment in the crafted MXF file.	ffmpeg	Unchanged	Not vulnerable	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5269
3890	CVE-2017-14169	Medium	High	In the mxf_read_primer_pack function in libavformat/mxfdec.c in FFmpeg 3.3.3, an integer signedness error might occur when a crafted file, which claims a large item_num field such as 0xffffffff, is provided. As a result, the variable item_num turns negative, bypassing the check for a large value.	ffmpeg	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5363
3891	CVE-2017-14167	HIGH	High	Integer overflow in the load_multiboot function in hw/i386/multiboot.c in QEMU (aka Quick Emulator) allows local guest OS users to execute arbitrary code on the host via crafted multiboot header address values, which trigger an out-of-bounds write.	qemu	Unchanged	8.0.0.23	9.0.0.12	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5321

	A	B	C	D	E	F	G	H	I	J	K	L	M
3892	CVE-2017-14166	Medium	Medium	libarchive 3.3.2 allows remote attackers to cause a denial of service (xml_data heap-based buffer over-read and application crash) via a crafted xar archive, related to the mishandling of empty strings in the atol8 function in archive_read_support_format_xar.c.	libarchive	Unchanged	8.0.0.22	9.0.0.11	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5402
3893	CVE-2017-14164	MEDIUM	High	A size-validation issue was discovered in opj_j2k_write_sot in lib/openjp2/j2k.c in OpenJPEG 2.2.0. The vulnerability causes an out-of-bounds write, which may lead to remote denial of service (heap-based buffer overflow affecting opj_write_bytes_LE in lib/openjp2/cio.c) or possibly remote code execution. NOTE: this vulnerability exists because of an incomplete fix for CVE-2017-14152.	openjpeg	Unchanged	Won't Fix	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5280
3894	CVE-2017-14160	MEDIUM	High	The bark_noise_hybridmp function in psy.c in Xiph.Org libvorbis 1.3.5 allows remote attackers to cause a denial of service (out-of-bounds access and application crash) or possibly have unspecified other impact via a crafted mp4 file.	libvorbis	Unchanged	8.0.0.26	9.0.0.16	10.17.41.8	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5443
3895	CVE-2017-14159	LOW	Medium	slapd in OpenLDAP 2.4.45 and earlier creates a PID file after dropping privileges to a non-root account, which might allow local users to kill arbitrary processes by leveraging access to this non-root account for PID file modification before a root script executes a kill `cat /pathname` command, as demonstrated by openldap-initscript.	openldap	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5208
3896	CVE-2017-14156	Low	Medium	The atyfb_ioctl function in drivers/video/fbdev/aty/atyfb_base.c in the Linux kernel through 4.12.10 does not initialize a certain data structure, which allows local users to obtain sensitive information from kernel stack memory by reading locations associated with padding bytes.	linux	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5262
3897	CVE-2017-14152	Medium	High	A mishandled zero case was discovered in opj_j2k_set_cinema_parameters in lib/openjp2/j2k.c in OpenJPEG 2.2.0. The vulnerability causes an out-of-bounds write, which may lead to remote denial of service (heap-based buffer overflow affecting opj_write_bytes_LE in lib/openjp2/cio.c and opj_j2k_write_sot in lib/openjp2/j2k.c) or possibly remote code execution.	openjpeg	Unchanged	Won't Fix	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5303
3898	CVE-2017-14151	Medium	High	An off-by-one error was discovered in opj_tcd_code_block_enc_allocate_data in lib/openjp2/tcd.c in OpenJPEG 2.2.0. The vulnerability causes an out-of-bounds write, which may lead to remote denial of service (heap-based buffer overflow affecting opj_mqc_flush in lib/openjp2/mqc.c and opj_t1_encode_cblk in lib/openjp2/t1.c) or possibly remote code execution.	openjpeg	Unchanged	Won't Fix	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5282
3899	CVE-2017-14140	Low	Medium	The move_pages system call in mm/migrate.c in the Linux kernel before 4.12.9 doesn't check the effective uid of the target process, enabling a local attacker to learn the memory layout of a setuid executable despite ASLR.	linux	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5304
3900	CVE-2017-14139	Medium	High	ImageMagick 7.0.6-2 has a memory leak vulnerability in WriteMSLImage in coders/msl.c.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5379
3901	CVE-2017-14138	High	Critical	ImageMagick 7.0.6-5 has a memory leak vulnerability in ReadWEBPImage in coders/webp.c because memory is not freed in certain error cases, as demonstrated by VP8 errors.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5357
3902	CVE-2017-14137	High	Critical	ReadWEBPImage in coders/webp.c in ImageMagick 7.0.6-5 has an issue where memory allocation is excessive because it depends only on a length field in a header.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5240
3903	CVE-2017-14136	Medium	Medium	OpenCV (Open Source Computer Vision Library) 3.3 has an out-of-bounds write error in the function FillColorRow1 in utils.cpp when reading an image file by using cv::imread. NOTE: this vulnerability exists because of an incomplete fix for CVE-2017-12597.	opencv	Unchanged	Won't Fix	Investigate	10.0.0.0	Won't Fix	Won't Fix	Won't Fix	LIN9-5229
3904	CVE-2017-14132	Medium	Medium	JasPer 2.0.13 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted image, related to the jas_image_ishomosamp function in libjasper/base/jas_image.c.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5401
3905	CVE-2017-14130	Medium	Medium	The _bfd_elf_parse_attributes function in elf-attrs.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, allows remote attackers to cause a denial of service (_bfd_elf_attr_strdup heap-based buffer over-read and application crash) via a crafted ELF file.	binutils	Unchanged	8.0.0.23	9.0.0.12	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5187
3906	CVE-2017-14129	Medium	Medium	The read_section function in dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, allows remote attackers to cause a denial of service (parse_comp_unit heap-based buffer over-read and application crash) via a crafted ELF file.	binutils	Unchanged	8.0.0.23	9.0.0.12	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5188
3907	CVE-2017-14128	Medium	Medium	The decode_line_info function in dwarf2.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, allows remote attackers to cause a denial of service (read_1_byte heap-based buffer over-read and application crash) via a crafted ELF file.	binutils	Unchanged	8.0.0.23	9.0.0.12	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5192
3908	CVE-2017-14108	High	Medium	libgedit.a in GNOME gedit through 3.22.1 allows remote attackers to cause a denial of service (CPU consumption) via a file that begins with many '\0' characters.	gedit	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5259
3909	CVE-2017-14107	Medium	Medium	The _zip_read_eocd64 function in zip_open.c in libzip before 1.3.0 mishandles EOCD records, which allows remote attackers to cause a denial of service (memory allocation failure in _zip_cdir_grow in zip_dirent.c) via a crafted ZIP archive.	php	Unchanged	8.0.0.27	9.0.0.17	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4168
3910	CVE-2017-14106	Medium	Medium	The tcp_disconnect function in net/ipv4/tcp.c in the Linux kernel before 4.12 allows local users to cause a denial of service (__tcp_select_window divide-by-zero error and system crash) by triggering a disconnect within a certain tcp_recvmsg code path.	linux	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5191

	A	B	C	D	E	F	G	H	I	J	K	L	M
3911	CVE-2017-14064	HIGH	Critical	Ruby through 2.2.7, 2.3.x through 2.3.4, and 2.4.x through 2.4.1 can expose arbitrary memory during a JSON.generate call. The issues lies in using strdup in ext/json/ext/generator/generator.c, which will stop after encountering a \0' byte, returning a pointer to a string of length zero, which is not the length stored in space_len.	ruby	Unchanged	8.0.0.22	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5274
3912	CVE-2017-14060	Medium	Medium	In ImageMagick 7.0.6-10, a NULL Pointer Dereference issue is present in the ReadCUTImage function in coders/cut.c that could allow an attacker to cause a Denial of Service (in the QueueAuthenticPixelCacheNexus function within the MagickCore/cache.c file) by submitting a malformed image file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5266
3913	CVE-2017-14059	High	Medium	In FFmpeg 3.3.3, a DoS in cine_read_header() due to lack of an EOF check might cause huge CPU and memory consumption. When a crafted CINE file, which claims a large duration field in the header but does not contain sufficient backing data, is provided, the image-offset parsing loop would consume huge CPU and memory resources, since there is no EOF check inside the loop.	ffmpeg	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5273
3914	CVE-2017-14058	Medium	Medium	In FFmpeg 3.3.3, the read_data function in libavformat/hls.c does not restrict reload attempts for an insufficient list, which allows remote attackers to cause a denial of service (infinite loop).	ffmpeg	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5341
3915	CVE-2017-14057	High	Medium	In FFmpeg 3.3.3, a DoS in asf_read_marker() due to lack of an EOF (End of File) check might cause huge CPU and memory consumption. When a crafted ASF file, which claims a large name_len or count field in the header but does not contain sufficient backing data, is provided, the loops over the name and markers would consume huge CPU and memory resources, since there is no EOF check inside these loops.	ffmpeg	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5386
3916	CVE-2017-14056	High	Medium	In libavformat/rl2.c in FFmpeg 3.3.3, a DoS in rl2_read_header() due to lack of an EOF (End of File) check might cause huge CPU and memory consumption. When a crafted RL2 file, which claims a large frame_count field in the header but does not contain sufficient backing data, is provided, the loops (for offset and size tables) would consume huge CPU and memory resources, since there is no EOF check inside these loops.	ffmpeg	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5283
3917	CVE-2017-14055	High	Medium	In libavformat/mvdec.c in FFmpeg 3.3.3, a DoS in mv_read_header() due to lack of an EOF (End of File) check might cause huge CPU and memory consumption. When a crafted MV file, which claims a large nb_frames field in the header but does not contain sufficient backing data, is provided, the loop over the frames would consume huge CPU and memory resources, since there is no EOF check inside the loop.	ffmpeg	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5225
3918	CVE-2017-14054	High	Medium	In libavformat/rmdec.c in FFmpeg 3.3.3, a DoS in ivr_read_header() due to lack of an EOF (End of File) check might cause huge CPU consumption. When a crafted IVR file, which claims a large len field in the header but does not contain sufficient backing data, is provided, the first type==4 loop would consume huge CPU resources, since there is no EOF check inside the loop.	ffmpeg	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5366
3919	CVE-2017-14051	Medium	Medium	An integer overflow in the qla2x00_sysfs_write_optrom_ctl function in drivers/scsi/qla2xxx/qla_attr.c in the Linux kernel through 4.12.10 allows local users to cause a denial of service (memory corruption and system crash) by leveraging root access.	linux	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5277
3920	CVE-2017-14041	Medium	High	A stack-based buffer overflow was discovered in the pgxtoimage function in bin/jp2/convert.c in OpenJPEG 2.2.0. The vulnerability causes an out-of-bounds write, which may lead to remote denial of service or possibly remote code execution.	openjpeg	Unchanged	Won't Fix	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5393
3921	CVE-2017-14040	Medium	High	An invalid write access was discovered in bin/jp2/convert.c in OpenJPEG 2.2.0, triggering a crash in the tgatoimage function. The vulnerability may lead to remote denial of service or possibly unspecified other impact.	openjpeg	Unchanged	Won't Fix	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5233
3922	CVE-2017-14039	Medium	High	A heap-based buffer overflow was discovered in the opj_t2_encode_packet function in lib/openjp2/t2.c in OpenJPEG 2.2.0. The vulnerability causes an out-of-bounds write, which may lead to remote denial of service or possibly unspecified other impact.	openjpeg	Unchanged	Won't Fix	9.0.0.19	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5279
3923	CVE-2017-14033	MEDIUM	High	The decode method in the OpenSSL::ASN1 module in Ruby before 2.2.8, 2.3.x before 2.3.5, and 2.4.x through 2.4.1 allows attackers to cause a denial of service (interpreter crash) via a crafted string.	ruby	Unchanged	8.0.0.23	9.0.0.12	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5466
3924	CVE-2017-13768	Medium	Medium	Null Pointer Dereference in the IdentifyImage function in MagickCore/identify.c in ImageMagick through 7.0.6-10 allows an attacker to perform denial of service by sending a crafted image file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5335
3925	CVE-2017-13767	High	High	In Wireshark 2.4.0, 2.2.0 to 2.2.8, and 2.0.0 to 2.0.14, the MSDP dissector could go into an infinite loop. This was addressed in epan/dissectors/packet-msdp.c by adding length validation.	wireshark	Unchanged	Not vulnerable	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5337
3926	CVE-2017-13766	Medium	High	In Wireshark 2.4.0 and 2.2.0 to 2.2.8, the Profinet I/O dissector could crash with an out-of-bounds write. This was addressed in plugins/profinet/packet-dcerpc-pn-io.c by adding string validation.	wireshark	Unchanged	Not vulnerable	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5292
3927	CVE-2017-13765	Medium	High	In Wireshark 2.4.0, 2.2.0 to 2.2.8, and 2.0.0 to 2.0.14, the IrCOMM dissector has a buffer over-read and application crash. This was addressed in plugins/irda/packet-ircomm.c by adding length validation.	wireshark	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5331
3928	CVE-2017-13764	Medium	High	In Wireshark 2.4.0, the Modbus dissector could crash with a NULL pointer dereference. This was addressed in epan/dissectors/packet-mbtcp.c by adding length validation.	wireshark	Unchanged	Not vulnerable	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5296
3929	CVE-2017-13758	Medium	Medium	In ImageMagick 7.0.6-10, there is a heap-based buffer overflow in the TracePoint() function in MagickCore/draw.c.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5293

	A	B	C	D	E	F	G	H	I	J	K	L	M
3930	CVE-2017-13757	Medium	Medium	The Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, does not validate the PLT section size, which allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted ELF file, related to elf_i386_get_synthetic_symtab in elf32-i386.c and elf_x86_64_get_synthetic_symtab in elf64-x86-64.c.	binutils	Unchanged	Not vulnerable	Not vulnerable	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5237
3931	CVE-2017-13752	Medium	High	There is a reachable assertion abort in the function jpc_dequantize() in jpc/jpc_dec.c in JasPer 2.0.12 that will lead to a remote denial of service attack.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5272

3934	CVE-2017-13749	Medium	High	There is a reachable assertion abort in the function jpc_pi_nextrpcl() in jpc/jpc_t2cod.c in JasPer 2.0.12 that will lead to a remote denial of service attack.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5213
3935	CVE-2017-13748	Medium	High	There are lots of memory leaks in JasPer 2.0.12, triggered in the function jas_strdup() in base/jas_string.c, that will lead to a remote denial of service attack.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5387
3936	CVE-2017-13747	Medium	High	There is a reachable assertion abort in the function jpc_floorlog2() in jpc/jpc_math.c in JasPer 2.0.12 that will lead to a remote denial of service attack.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5354
3937	CVE-2017-13746	Medium	High	There is a reachable assertion abort in the function jpc_dec_process_siz() in jpc/jpc_dec.c:1297 in JasPer 2.0.12 that will lead to a remote denial of service attack.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5328
3938	CVE-2017-13745	Medium	High	There is a reachable assertion abort in the function jpc_dec_process_sot() in jpc/jpc_dec.c in JasPer 2.0.12 that will lead to a remote denial of service attack.	jasper	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5244
3939	CVE-2017-13734	Medium	Medium	There is an illegal address access in the _nc_safe_strcat function in strings.c in ncurses 6.0 that will lead to a remote denial of service attack.	ncurses	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5322
3940	CVE-2017-13733	Medium	Medium	There is an illegal address access in the fmt_entry function in progs/dump_entry.c in ncurses 6.0 that might lead to a remote denial of service attack.	ncurses	Unchanged	8.0.0.25	9.0.0.14	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5330
3941	CVE-2017-13732	Medium	Medium	There is an illegal address access in the function dump_uses() in progs/dump_entry.c in ncurses 6.0 that might lead to a remote denial of service attack.	ncurses	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5338
3942	CVE-2017-13731	Medium	Medium	There is an illegal address access in the function postprocess_termcap() in parse_entry.c in ncurses 6.0 that will lead to a remote denial of service attack.	ncurses	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5205
3943	CVE-2017-13730	Medium	Medium	There is an illegal address access in the function _nc_read_entry_source() in progs/tic.c in ncurses 6.0 that might lead to a remote denial of service attack.	ncurses	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5276
3944	CVE-2017-13729	Medium	Medium	There is an illegal address access in the _nc_save_str function in alloc_entry.c in ncurses 6.0. It will lead to a remote denial of service attack.	ncurses	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5257
3945	CVE-2017-13728	Medium	High	There is an infinite loop in the next_char function in comp_scan.c in ncurses 6.0, related to libtic. A crafted input will lead to a remote denial of service attack.	ncurses	Unchanged	8.0.0.22	9.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5253
3946	CVE-2017-13727	Medium	Medium	There is a reachable assertion abort in the function TIFFWriteDirectoryTagSubifd() in LibTIFF 4.0.8, related to tif_dirwrite.c and a SubIFD tag. A crafted input will lead to a remote denial of service attack.	libtiff	Unchanged	8.0.0.22	9.0.0.11	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5332
3947	CVE-2017-13726	Medium	Medium	There is a reachable assertion abort in the function TIFFWriteDirectorySec() in LibTIFF 4.0.8, related to tif_dirwrite.c and a SubIFD tag. A crafted input will lead to a remote denial of service attack.	libtiff	Unchanged	8.0.0.22	9.0.0.11	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5209
3948	CVE-2017-13725	HIGH	Critical	The IPv6 routing header parser in tcpdump before 4.9.2 has a buffer over-read in print-rt6.c:rt6_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5260
3949	CVE-2017-13723	MEDIUM	High	In X.Org Server (aka xserver and xorg-server) before 1.19.4, a local attacker authenticated to the X server could overflow a global buffer, causing crashes of the X server or potentially other problems by injecting large or malformed XKB related atoms and accessing them via xkbcomp.	xorg	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5563
3950	CVE-2017-13722	LOW	High	In the pcfGetProperties function in bitmap/pcfread.c in libXfont through 1.5.2 and 2.x before 2.0.2, a missing boundary check (for PCF files) could be used by local attackers authenticated to an Xserver for a buffer over-read, for information disclosure or a crash of the X server.	libxfont	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5576
3951	CVE-2017-13721	LOW	Medium	In X.Org Server (aka xserver and xorg-server) before 1.19.4, an attacker authenticated to an X server with the X shared memory extension enabled can cause aborts of the X server or replace shared memory segments of other X clients in the same session.	xorg	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5556
3952	CVE-2017-13720	LOW	High	In the PatternMatch function in fontfile/fontdir.c in libXfont through 1.5.2 and 2.x before 2.0.2, an attacker with access to an X connection can cause a buffer over-read during pattern matching of fonts, leading to information disclosure or a crash (denial of service). This occurs because '\0' characters are incorrectly skipped in situations involving ? characters.	libxfont	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5545
3953	CVE-2017-13716	High	Medium	The C++ symbol demangler routine in cplus-dem.c in libiberty, as distributed in GNU Binutils 2.29, allows remote attackers to cause a denial of service (excessive memory allocation and application crash) via a crafted file, as demonstrated by a call from the Binary File Descriptor (BFD) library (aka libbfd).	binutils	Unchanged	Investigate	Vulnerable	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5216

	A	B	C	D	E	F	G	H	I	J	K	L	M
3954	CVE-2017-13715	High	Critical	The __skb_flow_dissect function in net/core/flow_dissector.c in the Linux kernel before 4.3 does not ensure that n_proto, ip_proto, and thoff are initialized, which allows remote attackers to cause a denial of service (system crash) or possibly execute arbitrary code via a single crafted MPLS packet.	linux	Unchanged	8.0.0.22	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5190
3955	CVE-2017-13712	Medium	High	NULL Pointer Dereference in the id3v2AddAudioDuration function in libmp3lame/id3tag.c in LAME 3.99.5 allows attackers to perform Denial of Service by triggering a NULL first argument.	lame	Unchanged	8.0.0.28	9.0.0.19	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5223
3956	CVE-2017-13711	Medium	High	Use-after-free vulnerability in the sofree function in slirp/socket.c in QEMU (aka Quick Emulator) allows attackers to cause a denial of service (QEMU instance crash) by leveraging failure to properly clear ifq_so from pending packets.	qemu	Unchanged	Not vulnerable	Not vulnerable	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5219
3957	CVE-2017-13710	MEDIUM	High	The setup_group function in elf.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, allows remote attackers to cause a denial of service (NULL pointer dereference and application crash) via a group section that is too small.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5161
3958	CVE-2017-13704	MEDIUM	High	In dnsmasq before 2.78, if the DNS packet size does not match the expected size, the size parameter in a memset call gets a negative value. As it is an unsigned value, memset ends up writing up to 0xffffffff zero's (0xffffffffffffffff in 64 bit platforms), making dnsmasq crash.	dnsmasq	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5506
3959	CVE-2017-13695	LOW	Medium	The acpi_ns_evaluate() function in drivers/acpi/acpica/nseval.c in the Linux kernel through 4.12.9 does not flush the operand cache and causes a kernel stack dump, which allows local users to obtain sensitive information from kernel memory and bypass the KASLR protection mechanism (in the kernel through 4.9) via a crafted ACPI table.	linux	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5127
3960	CVE-2017-13694	LOW	Medium	The acpi_ps_complete_final_op() function in drivers/acpi/acpica/psobject.c in the Linux kernel through 4.12.9 does not flush the node and node_ext caches and causes a kernel stack dump, which allows local users to obtain sensitive information from kernel memory and bypass the KASLR protection mechanism (in the kernel through 4.9) via a crafted ACPI table.	linux	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5138
3961	CVE-2017-13693	MEDIUM	Medium	The acpi_ds_create_operands() function in drivers/acpi/acpica/dsutils.c in the Linux kernel through 4.12.9 does not flush the operand cache and causes a kernel stack dump, which allows local users to obtain sensitive information from kernel memory and bypass the KASLR protection mechanism (in the kernel through 4.9) via a crafted ACPI table.	linux	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5156
3962	CVE-2017-13690	HIGH	Critical	The IKEv2 parser in tcpdump before 4.9.2 has a buffer over-read in print-isakmp.c, several functions.	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5384
3963	CVE-2017-13689	HIGH	Critical	The IKEv1 parser in tcpdump before 4.9.2 has a buffer over-read in print-isakmp.c:ikev1_id_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5230
3964	CVE-2017-13688	HIGH	Critical	The OLSR parser in tcpdump before 4.9.2 has a buffer over-read in print-olsr.c:olsr_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5302
3965	CVE-2017-13687	HIGH	Critical	The Cisco HDLC parser in tcpdump before 4.9.2 has a buffer over-read in print-chdlc.c:chdlc_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5380
3966	CVE-2017-13686	HIGH	High	net/ipv4/route.c in the Linux kernel 4.13-rc1 through 4.13-rc6 is too late to check for a NULL fi field when RTM_F_FIB_MATCH is set, which allows local users to cause a denial of service (NULL pointer dereference) or possibly have unspecified other impact via crafted system calls. NOTE: this does not affect any stable release.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5145
3967	CVE-2017-13685	Medium	Medium	The dump_callback function in SQLite 3.20.0 allows remote attackers to cause a denial of service (EXC_BAD_ACCESS and application crash) via a crafted file.	sqlite	Unchanged	8.0.0.30	9.0.0.21	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5255
3968	CVE-2017-13673	Medium	Medium	The vga display update in Qemu 2.8.0 through 2.9.0 mis-calculated the region for the dirty bitmap snapshot in case split screen mode is used causing a denial of service (assertion failure) in the cpu_physical_memory_snapshot_get_dirty function.	qemu	Unchanged	Not vulnerable	Not vulnerable	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5368
3969	CVE-2017-13672	Low	Medium	QEMU (aka Quick Emulator), when built with the VGA display emulator support, allows local guest OS privileged users to cause a denial of service (out-of-bounds read and QEMU process crash) via vectors involving display update.	qemu	Unchanged	8.0.0.23	9.0.0.12	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5391
3970	CVE-2017-13658	MEDIUM	Medium	In ImageMagick before 6.9.9-3 and 7.x before 7.0.6-3, there is a missing NULL check in the ReadMATImage function in coders/mat.c, leading to a denial of service (assertion failure and application exit) in the DestroyImageInfo function in MagickCore/image.c.	imagemagick	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5135
3971	CVE-2017-13305	MEDIUM	MEDIUM	A information disclosure vulnerability in the Upstream kernel encrypted-keys. Product: Android. Versions: Android kernel. Android ID: A-70526974.	linux	Unchanged	8.0.0.31	9.0.0.22	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4334
3972	CVE-2017-13168	MEDIUM	High	An elevation of privilege vulnerability in the kernel scsi driver. Product: Android. Versions: Android kernel. Android ID A-65023233.	linux	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4335
3973	CVE-2017-13166	MEDIUM	High	An elevation of privilege vulnerability in the kernel v4l2 video driver. Product: Android. Versions: Android kernel. Android ID A-34624167.	linux	Unchanged	Investigate	Investigate	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-4186
3974	CVE-2017-13146	MEDIUM	High	In ImageMagick before 6.9.8-5 and 7.x before 7.0.5-6, there is a memory leak in the ReadMATImage function in coders/mat.c.	imagemagick	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5124
3975	CVE-2017-13145	MEDIUM	Medium	In ImageMagick before 6.9.8-8 and 7.x before 7.0.5-9, the ReadJP2Image function in coders/jp2.c does not properly validate the channel geometry, leading to a crash.	imagemagick	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5125
3976	CVE-2017-13144	MEDIUM	Medium	In ImageMagick before 6.9.7-10, there is a crash (rather than a width or height exceeds limit error report) if the image dimensions are too large, as demonstrated by use of the mpc coder.	imagemagick	Unchanged	8.0.0.22	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5121

	A	B	C	D	E	F	G	H	I	J	K	L	M
3977	CVE-2017-13143	MEDIUM	High	In ImageMagick before 6.9.7-6 and 7.x before 7.0.4-6, the ReadMATImage function in coders/mat.c uses uninitialized data, which might allow remote attackers to obtain sensitive information from process memory.	imagemagick	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5140
3978	CVE-2017-13142	MEDIUM	Medium	In ImageMagick before 6.9.9-0 and 7.x before 7.0.6-1, a crafted PNG file could trigger a crash because there was an insufficient check for short files.	imagemagick	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5147
3979	CVE-2017-13141	MEDIUM	Medium	In ImageMagick before 6.9.9-4 and 7.x before 7.0.6-4, a crafted file could trigger a memory leak in ReadOnePNGImage in coders/png.c.	imagemagick	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5132
3980	CVE-2017-13140	MEDIUM	Medium	In ImageMagick before 6.9.9-1 and 7.x before 7.0.6-2, the ReadOnePNGImage function in coders/png.c allows remote attackers to cause a denial of service (application hang in LockSemaphoreInfo) via a PNG file with a width equal to MAGICK_WIDTH_LIMIT.	imagemagick	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5160
3981	CVE-2017-13139	HIGH	Critical	In ImageMagick before 6.9.9-0 and 7.x before 7.0.6-1, the ReadOneMNGImage function in coders/png.c has an out-of-bounds read with the MNG CLIP chunk.	imagemagick	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5153
3982	CVE-2017-13134	MEDIUM	Medium	In ImageMagick 7.0.6-6, a heap-based buffer over-read was found in the function SFWScan in coders/sfw.c, which allows attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5169
3983	CVE-2017-13133	HIGH	Medium	In ImageMagick 7.0.6-8, the load_level function in coders/xcf.c lacks offset validation, which allows attackers to cause a denial of service (load_tile memory exhaustion) via a crafted file.	imagemagick	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5131
3984	CVE-2017-13132	MEDIUM	Medium	In ImageMagick 7.0.6-8, the WritePDFImage function in coders/pdf.c operates on an incorrect data structure in the dump uncompressed PseudoColor packets step, which allows attackers to cause a denial of service (assertion failure in WriteBlobStream in MagickCore/blob.c) via a crafted file.	imagemagick	Unchanged	Not vulnerable	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5158
3985	CVE-2017-13131	MEDIUM	Medium	In ImageMagick 7.0.6-8, a memory leak vulnerability was found in the function ReadMIFFImage in coders/miff.c, which allows attackers to cause a denial of service (memory consumption in NewLinkedList in MagickCore/linked-list.c) via a crafted file.	imagemagick	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5142
3986	CVE-2017-13099	MEDIUM	Medium	wolfSSL prior to version 3.12.2 provides a weak Bleichenbacher oracle when any TLS cipher suite using RSA key exchange is negotiated. An attacker can recover the private key from a vulnerable wolfSSL application. This vulnerability is referred to as ROBOT.	wolfssl	Unchanged	Vulnerable	Vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2744
3987	CVE-2017-13090	HIGH	High	The retr.c:fd_read_body() function is called when processing OK responses. When the response is sent chunked in wget before 1.19.2, the chunk parser uses strtol() to read each chunk's length, but doesn't check that the chunk length is a non-negative number. The code then tries to read the chunk in pieces of 8192 bytes by using the MIN() macro, but ends up passing the negative chunk length to retr.c:fd_read(). As fd_read() takes an int argument, the high 32 bits of the chunk length are discarded, leaving fd_read() with a completely attacker controlled length argument. The attacker can corrupt malloc metadata after the allocated buffer.	wget	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5719
3988	CVE-2017-13089	HIGH	High	The http.c:skip_short_body() function is called in some circumstances, such as when processing redirects. When the response is sent chunked in wget before 1.19.2, the chunk parser uses strtol() to read each chunk's length, but doesn't check that the chunk length is a non-negative number. The code then tries to skip the chunk in pieces of 512 bytes by using the MIN() macro, but ends up passing the negative chunk length to connect.c:fd_read(). As fd_read() takes an int argument, the high 32 bits of the chunk length are discarded, leaving fd_read() with a completely attacker controlled length argument.	wget	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5702
3989	CVE-2017-13088	LOW	Medium	Wi-Fi Protected Access (WPA and WPA2) allows reinstallation of the integrity group key (IGTK) when processing a Wireless Network Management (WNM) Sleep Mode Response frame.	wpa-supplicant & hostapd	Unchanged	8.0.0.23	9.0.0.12	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5522
3990	CVE-2017-13087	LOW	Medium	Wi-Fi Protected Access (WPA and WPA2) allows reinstallation of the group key (GTK) when processing a Wireless Network Management (WNM) Sleep Mode Response frame.	wpa-supplicant & hostapd	Unchanged	8.0.0.23	9.0.0.12	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5542
3991	CVE-2017-13086	MEDIUM	Medium	Wi-Fi Protected Access (WPA and WPA2) allows reinstallation of the Tunneled Direct-Link Setup (TDLS) PeerKey (TPK) key in the TDLS handshake.	wpa-supplicant & hostapd	Unchanged	8.0.0.23	9.0.0.12	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5544
3992	CVE-2017-13084	MEDIUM	Medium	Wi-Fi Protected Access (WPA and WPA2) allows reinstallation of the STK key in the PeerKey handshake.	wpa-supplicant & hostapd	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5574
3993	CVE-2017-13082	MEDIUM	High	Wi-Fi Protected Access (WPA and WPA2) accepting a retransmitted Fast BSS Transition Reassociation Request and reinstalling the pairwise key while processing it.	wpa-supplicant & hostapd	Unchanged	8.0.0.23	9.0.0.12	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5526
3994	CVE-2017-13081	LOW	Medium	Wi-Fi Protected Access (WPA and WPA2) allows reinstallation of the integrity group key in the Group Key handshake.	wpa-supplicant & hostapd	Unchanged	8.0.0.23	9.0.0.12	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5552
3995	CVE-2017-13080	LOW	Medium	Wi-Fi Protected Access (WPA and WPA2) allows reinstallation of the group key in the Group Key handshake.	wpa-supplicant & hostapd	Unchanged	8.0.0.23	9.0.0.12	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5557
3996	CVE-2017-13079	LOW	Medium	Wi-Fi Protected Access (WPA and WPA2) allows reinstallation of the integrity group key in the Four-way handshake.	wpa-supplicant & hostapd	Unchanged	8.0.0.23	9.0.0.12	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5596
3997	CVE-2017-13078	LOW	Medium	Wi-Fi Protected Access (WPA and WPA2) allowsreinstallation of the group key in the Four-way handshake.	wpa-supplicant & hostapd	Unchanged	8.0.0.23	9.0.0.12	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5565
3998	CVE-2017-13077	MEDIUM	Medium	Wi-Fi Protected Access (WPA and WPA2) allows reinstallation of the pairwise key in the four-way handshake.	wpa-supplicant & hostapd	Unchanged	8.0.0.23	9.0.0.12	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-5553
3999	CVE-2017-13062	Medium	Medium	In ImageMagick 7.0.6-6, a memory leak vulnerability was found in the function formatIPTC in coders/meta.c, which allows attackers to cause a denial of service (WriteMETAImage memory consumption) via a crafted file.	imagemagick	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5167

4003	CVE-2017-13055	HIGH	Critical	The ISO IS-IS parser in tcpdump before 4.9.2 has a buffer over-read in print-isoclns.c:isis_print_is_reach_subtlv().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5238
4004	CVE-2017-13054	HIGH	Critical	The LLDP parser in tcpdump before 4.9.2 has a buffer over-read in print-lldp.c:lldp_private_8023_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5285
4005	CVE-2017-13053	HIGH	Critical	The BGP parser in tcpdump before 4.9.2 has a buffer over-read in print-bgp.c:decode_rt_routing_info().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5310
4006	CVE-2017-13052	HIGH	Critical	The CFM parser in tcpdump before 4.9.2 has a buffer over-read in print-cfm.c:cfm_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5224
4007	CVE-2017-13051	HIGH	Critical	The RSVP parser in tcpdump before 4.9.2 has a buffer over-read in print-rsvp.c:rsvp_obj_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5324
4008	CVE-2017-13050	HIGH	Critical	The RPKI-Router parser in tcpdump before 4.9.2 has a buffer over-read in print-rpki-rtr.c:rpki_rtr_pdu_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5315
4009	CVE-2017-13049	HIGH	Critical	The Rx protocol parser in tcpdump before 4.9.2 has a buffer over-read in print-rx.c:ubik_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5356
4010	CVE-2017-13048	HIGH	Critical	The RSVP parser in tcpdump before 4.9.2 has a buffer over-read in print-rsvp.c:rsvp_obj_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5236
4011	CVE-2017-13047	HIGH	Critical	The ISO ES-IS parser in tcpdump before 4.9.2 has a buffer over-read in print-isoclns.c:esis_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5323
4012	CVE-2017-13046	HIGH	Critical	The BGP parser in tcpdump before 4.9.2 has a buffer over-read in print-bgp.c:bgp_attr_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5297
4013	CVE-2017-13045	HIGH	Critical	The VQP parser in tcpdump before 4.9.2 has a buffer over-read in print-vqp.c:vqp_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5226
4014	CVE-2017-13044	HIGH	Critical	The HNCP parser in tcpdump before 4.9.2 has a buffer over-read in print-hncp.c:dhcpv4_print().	tcpdump	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5258
4015	CVE-2017-13043	HIGH	Critical	The BGP parser in tcpdump before 4.9.2 has a buffer over-read in print-bgp.c:decode_multicast_vpn().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5235
4016	CVE-2017-13042	HIGH	Critical	The HNCP parser in tcpdump before 4.9.2 has a buffer over-read in print-hncp.c:dhcpv6_print().	tcpdump	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5290
4017	CVE-2017-13041	HIGH	Critical	The ICMPv6 parser in tcpdump before 4.9.2 has a buffer over-read in print-icmp6.c:icmp6_nodeinfo_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5231
4018	CVE-2017-13040	HIGH	Critical	The MPTCP parser in tcpdump before 4.9.2 has a buffer over-read in print-mptcp.c, several functions.	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5344
4019	CVE-2017-13039	HIGH	Critical	The ISAKMP parser in tcpdump before 4.9.2 has a buffer over-read in print-isakmp.c, several functions.	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5398
4020	CVE-2017-13038	HIGH	Critical	The PPP parser in tcpdump before 4.9.2 has a buffer over-read in print-ppp.c:handle_mlppp().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5215
4021	CVE-2017-13037	HIGH	Critical	The IP parser in tcpdump before 4.9.2 has a buffer over-read in print-ip.c:ip_printts().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5221
4022	CVE-2017-13036	HIGH	Critical	The OSPFv3 parser in tcpdump before 4.9.2 has a buffer over-read in print-ospf6.c:ospf6_decode_v3().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5360
4023	CVE-2017-13035	HIGH	Critical	The ISO IS-IS parser in tcpdump before 4.9.2 has a buffer over-read in print-isoclns.c:isis_print_id().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5206
4024	CVE-2017-13034	HIGH	Critical	The PGM parser in tcpdump before 4.9.2 has a buffer over-read in print-pgm.c:pgm_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5287
4025	CVE-2017-13033	HIGH	Critical	The VTP parser in tcpdump before 4.9.2 has a buffer over-read in print-vtp.c:vtp_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5358
4026	CVE-2017-13032	HIGH	Critical	The RADIUS parser in tcpdump before 4.9.2 has a buffer over-read in print-radius.c:print_attr_string().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5275
4027	CVE-2017-13031	HIGH	Critical	The IPv6 fragmentation header parser in tcpdump before 4.9.2 has a buffer over-read in print-frag6.c:frag6_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5261
4028	CVE-2017-13030	HIGH	Critical	The PIM parser in tcpdump before 4.9.2 has a buffer over-read in print-pim.c, several functions.	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5327
4029	CVE-2017-13029	HIGH	Critical	The PPP parser in tcpdump before 4.9.2 has a buffer over-read in print-ppp.c:print_ccp_config_options().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5270
4030	CVE-2017-13028	HIGH	Critical	The BOOTP parser in tcpdump before 4.9.2 has a buffer over-read in print-bootp.c:bootp_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5267
4031	CVE-2017-13027	HIGH	Critical	The LLDP parser in tcpdump before 4.9.2 has a buffer over-read in print-lldp.c:lldp_mgmt_addr_tlv_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5320
4032	CVE-2017-13026	HIGH	Critical	The ISO IS-IS parser in tcpdump before 4.9.2 has a buffer over-read in print-isoclns.c, several functions.	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5378
4033	CVE-2017-13025	HIGH	Critical	The IPv6 mobility parser in tcpdump before 4.9.2 has a buffer over-read in print-mobility.c:mobility_opt_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5268
4034	CVE-2017-13024	HIGH	Critical	The IPv6 mobility parser in tcpdump before 4.9.2 has a buffer over-read in print-mobility.c:mobility_opt_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5211
4035	CVE-2017-13023	HIGH	Critical	The IPv6 mobility parser in tcpdump before 4.9.2 has a buffer over-read in print-mobility.c:mobility_opt_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5228
4036	CVE-2017-13022	HIGH	Critical	The IP parser in tcpdump before 4.9.2 has a buffer over-read in print-ip.c:ip_printroute().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5367
4037	CVE-2017-13021	HIGH	Critical	The ICMPv6 parser in tcpdump before 4.9.2 has a buffer over-read in print-icmp6.c:icmp6_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5241
4038	CVE-2017-13020	HIGH	Critical	The VTP parser in tcpdump before 4.9.2 has a buffer over-read in print-vtp.c:vtp_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5316
4039	CVE-2017-13019	HIGH	Critical	The PGM parser in tcpdump before 4.9.2 has a buffer over-read in print-pgm.c:pgm_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5256
4040	CVE-2017-13018	HIGH	Critical	The PGM parser in tcpdump before 4.9.2 has a buffer over-read in print-pgm.c:pgm_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5352
4041	CVE-2017-13017	HIGH	Critical	The DHCPv6 parser in tcpdump before 4.9.2 has a buffer over-read in print-dhcp6.c:dhcp6opt_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5249
4042	CVE-2017-13016	HIGH	Critical	The ISO ES-IS parser in tcpdump before 4.9.2 has a buffer over-read in print-isoclns.c:esis_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5264
4043	CVE-2017-13015	HIGH	Critical	The EAP parser in tcpdump before 4.9.2 has a buffer over-read in print-eap.c:eap_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5309

	A	B	C	D	E	F	G	H	I	J	K	L	M
4044	CVE-2017-13014	HIGH	Critical	The White Board protocol parser in tcpdump before 4.9.2 has a buffer over-read in print-wb.c:wb_prep(), several functions.	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5336
4045	CVE-2017-13013	HIGH	Critical	The ARP parser in tcpdump before 4.9.2 has a buffer over-read in print-arp.c, several functions.	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5392
4046	CVE-2017-13012	HIGH	Critical	The ICMP parser in tcpdump before 4.9.2 has a buffer over-read in print-icmp.c:icmp_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5370
4047	CVE-2017-13011	HIGH	Critical	Several protocol parsers in tcpdump before 4.9.2 could cause a buffer overflow in util-print.c:bittok2str_internal().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5234
4048	CVE-2017-13010	HIGH	Critical	The BEEP parser in tcpdump before 4.9.2 has a buffer over-read in print-beep.c:l_strnstart().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5318
4049	CVE-2017-13009	HIGH	Critical	The IPv6 mobility parser in tcpdump before 4.9.2 has a buffer over-read in print-mobility.c:mobility_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5374
4050	CVE-2017-13008	HIGH	Critical	The IEEE 802.11 parser in tcpdump before 4.9.2 has a buffer over-read in print-802_11.c:parse_elements().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5294
4051	CVE-2017-13007	HIGH	Critical	The Apple PKTAP parser in tcpdump before 4.9.2 has a buffer over-read in print-pktap.c:pktap_if_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5311
4052	CVE-2017-13006	HIGH	Critical	The L2TP parser in tcpdump before 4.9.2 has a buffer over-read in print-l2tp.c, several functions.	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5214
4053	CVE-2017-13005	HIGH	Critical	The NFS parser in tcpdump before 4.9.2 has a buffer over-read in print-nfs.c:xid_map_enter().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5340
4054	CVE-2017-13004	HIGH	Critical	The Juniper protocols parser in tcpdump before 4.9.2 has a buffer over-read in print-juniper.c:juniper_parse_header().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5385
4055	CVE-2017-13003	HIGH	Critical	The LMP parser in tcpdump before 4.9.2 has a buffer over-read in print-lmp.c:lmp_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5295
4056	CVE-2017-13002	HIGH	Critical	The AODV parser in tcpdump before 4.9.2 has a buffer over-read in print-aodv.c:aodv_extension().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5299

4058	CVE-2017-13000	HIGH	Critical	The IEEE 802.15.4 parser in tcpdump before 4.9.2 has a buffer over-read in print-802_15_4.c:ieee802_15_4_if_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5333
4059	CVE-2017-12999	HIGH	Critical	The IS-IS parser in tcpdump before 4.9.2 has a buffer over-read in print-isoclns.c:isis_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5400
4060	CVE-2017-12998	HIGH	Critical	The IS-IS parser in tcpdump before 4.9.2 has a buffer over-read in print-isoclns.c:isis_print_extd_ip_reach().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5227
4061	CVE-2017-12997	MEDIUM	High	The LLDP parser in tcpdump before 4.9.2 could enter an infinite loop due to a bug in print-lldp.c:lldp_private_8021_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5373
4062	CVE-2017-12996	HIGH	Critical	The PIMv2 parser in tcpdump before 4.9.2 has a buffer over-read in print-pim.c:pimv2_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5271
4063	CVE-2017-12995	MEDIUM	High	The DNS parser in tcpdump before 4.9.2 could enter an infinite loop due to a bug in print-domain.c:ns_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5313
4064	CVE-2017-12994	HIGH	Critical	The BGP parser in tcpdump before 4.9.2 has a buffer over-read in print-bgp.c:bgp_attr_print().	tcpdump	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5207
4065	CVE-2017-12993	HIGH	Critical	The Juniper protocols parser in tcpdump before 4.9.2 has a buffer over-read in print-juniper.c, several functions.	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5346
4066	CVE-2017-12992	HIGH	Critical	The RIPng parser in tcpdump before 4.9.2 has a buffer over-read in print-ripng.c:ripng_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5397
4067	CVE-2017-12991	HIGH	Critical	The BGP parser in tcpdump before 4.9.2 has a buffer over-read in print-bgp.c:bgp_attr_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5350
4068	CVE-2017-12990	MEDIUM	High	The ISAKMP parser in tcpdump before 4.9.2 could enter an infinite loop due to bugs in print-isakmp.c, several functions.	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5326
4069	CVE-2017-12989	MEDIUM	High	The RESP parser in tcpdump before 4.9.2 could enter an infinite loop due to a bug in print-resp.c:resp_get_length().	tcpdump	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5278
4070	CVE-2017-12988	HIGH	Critical	The telnet parser in tcpdump before 4.9.2 has a buffer over-read in print-telnet.c:telnet_parse().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5369
4071	CVE-2017-12987	HIGH	Critical	The IEEE 802.11 parser in tcpdump before 4.9.2 has a buffer over-read in print-802_11.c:parse_elements().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5312
4072	CVE-2017-12986	HIGH	Critical	The IPv6 routing header parser in tcpdump before 4.9.2 has a buffer over-read in print-rt6.c:rt6_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5342
4073	CVE-2017-12985	HIGH	Critical	The IPv6 parser in tcpdump before 4.9.2 has a buffer over-read in print-ip6.c:ip6_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5390
4074	CVE-2017-12983	Medium	High	Heap-based buffer overflow in the ReadSFWImage function in coders/sfw.c in ImageMagick 7.0.6-8 allows remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted file.	imagemagick	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5139
4075	CVE-2017-12982	MEDIUM	Medium	The bmp_read_info_header function in bin/jp2/convertbmp.c in OpenJPEG 2.2.0 does not reject headers with a zero biBitCount, which allows remote attackers to cause a denial of service (memory allocation failure) in the opj_image_create function in lib/openjp2/image.c, related to the opj_aligned_alloc_n function in opj_malloc.c.	openjpeg	Unchanged	Won't Fix	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5126
4076	CVE-2017-12967	Medium	Medium	The getsym function in tekhex.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29, allows remote attackers to cause a denial of service (stack-based buffer over-read and application crash) via a malformed tekhex binary.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5159
4077	CVE-2017-12944	MEDIUM	High	The TIFFReadDirEntryArray function in tif_read.c in LibTIFF 4.0.8 mishandles memory allocation for short files, which allows remote attackers to cause a denial of service (allocation failure and application crash) in the TIFFFetchStripThing function in tif_dirread.c during a tiff2pdf invocation.	libtiff	Unchanged	8.0.0.28	9.0.0.18	10.17.41.13	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5134
4078	CVE-2017-12934	MEDIUM	High	ext/standard/var_unserializer.re in PHP 7.0.x before 7.0.21 and 7.1.x before 7.1.7 is prone to a heap use after free while unserializing untrusted data, related to the zval_get_type function in Zend/zend_types.h. Exploitation of this issue can have an unspecified impact on the integrity of PHP.	php	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5146
4079	CVE-2017-12933	HIGH	Critical	The finish_nested_data function in ext/standard/var_unserializer.re in PHP before 5.6.31, 7.0.x before 7.0.21, and 7.1.x before 7.1.7 is prone to a buffer over-read while unserializing untrusted data. Exploitation of this issue can have an unspecified impact on the integrity of PHP.	php	Unchanged	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5129

	A	B	C	D	E	F	G	H	I	J	K	L	M
4080	CVE-2017-12932	HIGH	Critical	ext/standard/var_unserializer.re in PHP 7.0.x through 7.0.22 and 7.1.x through 7.1.8 is prone to a heap use after free while unserializing untrusted data, related to improper use of the hash API for key deletion in a situation with an invalid array size. Exploitation of this issue can have an unspecified impact on the integrity of PHP.	php	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5136
4081	CVE-2017-12902	HIGH	Critical	The Zephyr parser in tcpdump before 4.9.2 has a buffer over-read in print-zephyr.c, several functions.	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5372
4082	CVE-2017-12901	HIGH	Critical	The EIGRP parser in tcpdump before 4.9.2 has a buffer over-read in print-eigrp.c:eigrp_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5382
4083	CVE-2017-12900	HIGH	Critical	Several protocol parsers in tcpdump before 4.9.2 could cause a buffer over-read in util-print.c:tok2strbuf().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5399
4084	CVE-2017-12899	HIGH	Critical	The DECnet parser in tcpdump before 4.9.2 has a buffer over-read in print-decnet.c:decnet_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5251
4085	CVE-2017-12898	HIGH	Critical	The NFS parser in tcpdump before 4.9.2 has a buffer over-read in print-nfs.c:interp_reply().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5339
4086	CVE-2017-12897	HIGH	Critical	The ISO CLNS parser in tcpdump before 4.9.2 has a buffer over-read in print-isoclns.c:isoclns_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5334
4087	CVE-2017-12896	HIGH	Critical	The ISAKMP parser in tcpdump before 4.9.2 has a buffer over-read in print-isakmp.c:isakmp_rfc3948_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5376
4088	CVE-2017-12895	HIGH	Critical	The ICMP parser in tcpdump before 4.9.2 has a buffer over-read in print-icmp.c:icmp_print().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5239
4089	CVE-2017-12894	HIGH	Critical	Several protocol parsers in tcpdump before 4.9.2 could cause a buffer over-read in addrtoname.c:lookup_bytestring().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5242
4090	CVE-2017-12893	HIGH	Critical	The SMB/CIFS parser in tcpdump before 4.9.2 has a buffer over-read in smbutil.c:name_len().	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5218
4091	CVE-2017-12883	MEDIUM	Critical	Buffer overflow in the regular expression parser in PERL before 5.24.3-RC1 and 5.26.x before 5.26.1-RC1 allows remote attackers to cause a denial of service (crash) or leak data from memory via vectors involving use of REXC_parse in the vFAIL macro.	perl	Unchanged	8.0.0.22	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5471
4092	CVE-2017-12877	Medium	Medium	Use-after-free vulnerability in the DestroyImage function in image.c in ImageMagick before 7.0.6-6 allows remote attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5308
4093	CVE-2017-12876	Medium	Medium	Heap-based buffer overflow in enhance.c in ImageMagick before 7.0.6-6 allows remote attackers to cause a denial of service via a crafted file.	imagemagick	Unchanged	Not vulnerable	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5300
4094	CVE-2017-12875	High	Medium	The WritePixelCachePixels function in ImageMagick 7.0.6-6 allows remote attackers to cause a denial of service (CPU consumption) via a crafted file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5343
4095	CVE-2017-12865	High	Critical	Stack-based buffer overflow in dnsproxy.c in connman 1.34 and earlier allows remote attackers to cause a denial of service (crash) or execute arbitrary code via a crafted response query string passed to the name variable.	connman	Unchanged	8.0.0.30	9.0.0.21	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5319
4096	CVE-2017-12864	Medium	High	In opencv/modules/imgcodecs/src/grfmt_pxm.cpp, function ReadNumber did not checkout the input length, which lead to integer overflow. If the image is from remote, may lead to remote code execution or denial of service. This affects Opencv 3.3 and earlier.	opencv	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Won't Fix	Won't Fix	Won't Fix	LIN9-5137
4097	CVE-2017-12863	Medium	High	In opencv/modules/imgcodecs/src/grfmt_pxm.cpp, function PxMDecoder::readData has a integer overflow when calculate src_pitch. If the image is from remote, may lead to remote code execution or denial of service. This affects Opencv 3.3 and earlier.	opencv	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Won't Fix	Won't Fix	Won't Fix	LIN9-5150
4098	CVE-2017-12862	Medium	High	In modules/imgcodecs/src/grfmt_pxm.cpp, the length of buffer AutoBuffer _src is small than expected, which will cause copy buffer overflow later. If the image is from remote, may lead to remote code execution or denial of service. This affects Opencv 3.3 and earlier.	opencv	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Won't Fix	Won't Fix	Won't Fix	LIN9-5141
4099	CVE-2017-12852	MEDIUM	High	The numpy.pad function in Numpy 1.13.1 and older versions is missing input validation. An empty list or ndarray will stick into an infinite loop, which can allow attackers to cause a DoS attack.	numpy	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5168
4100	CVE-2017-12847	MEDIUM	Medium	Nagios Core before 4.3.3 creates a nagios.lock PID file after dropping privileges to a non-root account, which might allow local users to kill arbitrary processes by leveraging access to this non-root account for nagios.lock modification before a root script executes a kill `cat /pathname/nagios.lock` command.	nagios-core	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5157
4101	CVE-2017-12839	Medium	HIGH	A heap-based buffer over-read in the getbits function in src/libmpg123/getbits.h in mpg123 through 1.25.5 allows remote attackers to cause a possible denial-of-service (out-of-bounds read) or possibly have unspecified other impact via a crafted mp3 file.	mpg123	Unchanged	Won't Fix	9.0.0.21	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-4060
4102	CVE-2017-12837	MEDIUM	High	Heap-based buffer overflow in the regular expression compiler in PERL before 5.24.3-RC1 and 5.26.x before 5.26.1-RC1 allows remote attackers to cause a denial of service (crash) via a crafted regular expression with the case-insensitive modifier.	perl	Unchanged	8.0.0.22	9.0.0.11	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5459
4103	CVE-2017-12814	High	Critical	Stack-based buffer overflow in the CPerlHost::Add method in win32/perlhost.h in Perl before 5.24.3-RC1 and 5.26.x before 5.26.1-RC1 on Windows allows attackers to execute arbitrary code via a long environment variable.	perl	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5520
4104	CVE-2017-12809	LOW	Medium	QEMU (aka Quick Emulator), when built with the IDE disk and CD/DVD-ROM Emulator support, allows local guest OS privileged users to cause a denial of service (NULL pointer dereference and QEMU process crash) by flushing an empty CDROM device drive.	qemu	Unchanged	Investigate	Investigate	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5120
4105	CVE-2017-12806	Medium	HIGH	In ImageMagick 7.0.6-6, a memory exhaustion vulnerability was found in the function format8BIM, which allows attackers to cause a denial of service.	imagemagick	Unchanged	Not vulnerable	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4058
4106	CVE-2017-12805	Medium	HIGH	In ImageMagick 7.0.6-6, a memory exhaustion vulnerability was found in the function ReadTIFFImage, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.31	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN1018-4059

	A	B	C	D	E	F	G	H	I	J	K	L	M
4107	CVE-2017-12799	MEDIUM	High	The elf_read_notesfunction in bfd/elf.c in GNU Binutils 2.29 allows remote attackers to cause a denial of service (buffer overflow and application crash) or possibly have unspecified other impact via a crafted binary file.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4978
4108	CVE-2017-12797	Medium	Medium	Integer overflow in the INT123_parse_new_id3 function in the ID3 parser in mpg123 before 1.25.5 on 32-bit platforms allows remote attackers to cause a denial of service via a crafted file, which triggers a heap-based buffer overflow.	mpg123	Unchanged	Won't Fix	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5245
4109	CVE-2017-12762	HIGH	Critical	In /drivers/isdn/i4l/isdn_net.c: A user-controlled buffer is copied into a local buffer of constant size using strcpy without a length check which can cause a buffer overflow. This affects the Linux kernel 4.9-stable tree, 4.12-stable tree, 3.18-stable tree, and 4.4-stable tree.	linux	Unchanged	8.0.0.21	9.0.0.10	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5058
4110	CVE-2017-12693	High	Medium	The ReadBMPImage function in coders/bmp.c in ImageMagick 7.0.6-6 allows remote attackers to cause a denial of service (memory consumption) via a crafted BMP file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5381
4111	CVE-2017-12692	High	Medium	The ReadVIFFImage function in coders/viff.c in ImageMagick 7.0.6-6 allows remote attackers to cause a denial of service (memory consumption) via a crafted VIFF file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5307
4112	CVE-2017-12691	High	Medium	The ReadOneLayer function in coders/xcf.c in ImageMagick 7.0.6-6 allows remote attackers to cause a denial of service (memory consumption) via a crafted file.	imagemagick	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5265
4113	CVE-2017-12678	MEDIUM	High	In TagLib 1.11.1, the rebuildAggregateFrames function in id3v2framefactory.cpp has a pointer to cast vulnerability, which allows remote attackers to cause a denial of service or possibly have unspecified other impact via a crafted audio file.	taglib	Unchanged	Not vulnerable	Not vulnerable	10.0.0.0	10.18.44.1	10.19.45.1	Not vulnerable	LIN9-4989
4114	CVE-2017-12676	Medium	Medium	In ImageMagick 7.0.6-3, a memory leak vulnerability was found in the function ReadOneJNGImage in coders/png.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5084
4115	CVE-2017-12675	Medium	Medium	In ImageMagick 7.0.6-3, a missing check for multidimensional data was found in coders/mat.c, leading to a memory leak in the function ReadImage in MagickCore/constitute.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5061
4116	CVE-2017-12674	High	Medium	In ImageMagick 7.0.6-2, a CPU exhaustion vulnerability was found in the function ReadPDBImage in coders/pdb.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5037
4117	CVE-2017-12673	Medium	Medium	In ImageMagick 7.0.6-3, a memory leak vulnerability was found in the function ReadOneMNGImage in coders/png.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5044
4118	CVE-2017-12672	Medium	Medium	In ImageMagick 7.0.6-3, a memory leak vulnerability was found in the function ReadMATImage in coders/mat.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4944
4119	CVE-2017-12671	Medium	Medium	In ImageMagick 7.0.6-3, a missing NULL assignment was found in coders/png.c, leading to an invalid free in the function RelinquishMagickMemory in MagickCore/memory.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5063
4120	CVE-2017-12670	Medium	Medium	In ImageMagick 7.0.6-3, missing validation was found in coders/mat.c, leading to an assertion failure in the function DestroyImage in MagickCore/image.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5060
4121	CVE-2017-12669	Medium	High	ImageMagick 7.0.6-2 has a memory leak vulnerability in WriteCALSImage in coders/cals.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4969
4122	CVE-2017-12668	Medium	High	ImageMagick 7.0.6-2 has a memory leak vulnerability in WritePCXImage in coders/pcx.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4934
4123	CVE-2017-12667	Medium	High	ImageMagick 7.0.6-1 has a memory leak vulnerability in ReadMATImage in coders\mat.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5007
4124	CVE-2017-12666	Medium	High	ImageMagick 7.0.6-2 has a memory leak vulnerability in WriteINLINEImage in coders/inline.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5054
4125	CVE-2017-12665	Medium	High	ImageMagick 7.0.6-2 has a memory leak vulnerability in WritePICTImage in coders/pict.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5021
4126	CVE-2017-12664	Medium	High	ImageMagick 7.0.6-2 has a memory leak vulnerability in WritePALMImage in coders/palm.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5034
4127	CVE-2017-12663	Medium	High	ImageMagick 7.0.6-2 has a memory leak vulnerability in WriteMAPImage in coders/map.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5073
4128	CVE-2017-12662	Medium	High	ImageMagick 7.0.6-2 has a memory leak vulnerability in WritePDFImage in coders/pdf.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5066
4129	CVE-2017-12654	Medium	Medium	The ReadPICTImage function in coders/pict.c in ImageMagick 7.0.6-3 allows attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4995
4130	CVE-2017-12652	HIGH	CRITICAL	libpng before 1.6.32 does not properly check the length of chunks against the user limit.	libpng	Unchanged	8.0.0.31	9.0.0.22	10.17.41.17	Not vulnerable	10.19.45.1	Not vulnerable	LIN1018-4418
4131	CVE-2017-12644	Medium	High	ImageMagick 7.0.6-1 has a memory leak vulnerability in ReadDCMImage in coders\dcm.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5049
4132	CVE-2017-12643	High	Medium	ImageMagick 7.0.6-1 has a memory exhaustion vulnerability in ReadOneJNGImage in coders\png.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4964
4133	CVE-2017-12642	Medium	High	ImageMagick 7.0.6-1 has a memory leak vulnerability in ReadMPCImage in coders\mpc.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5067
4134	CVE-2017-12641	Medium	High	ImageMagick 7.0.6-1 has a memory leak vulnerability in ReadOneJNGImage in coders\png.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5017
4135	CVE-2017-12640	Medium	High	ImageMagick 7.0.6-1 has an out-of-bounds read vulnerability in ReadOneMNGImage in coders/png.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4948
4136	CVE-2017-12627	HIGH	CRITICAL	In Apache Xerces-C XML Parser library before 3.2.1, processing of external DTD paths can result in a null pointer dereference under certain conditions.	xerces-c	Unchanged	8.0.0.26	9.0.0.15	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3554
4137	CVE-2017-12606	Medium	High	OpenCV (Open Source Computer Vision Library) through 3.3 has an out-of-bounds write error in the function FillColorRow4 in utils.cpp when reading an image file by using cv::imread.	opencv	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Won't Fix	Won't Fix	Won't Fix	LIN9-5002
4138	CVE-2017-12605	Medium	High	OpenCV (Open Source Computer Vision Library) through 3.3 has an out-of-bounds write error in the FillColorRow8 function in utils.cpp when reading an image file by using cv::imread.	opencv	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Won't Fix	Won't Fix	Won't Fix	LIN9-5003

4139	CVE-2017-12604	Medium	High	OpenCV (Open Source Computer Vision Library) through 3.3 has an out-of-bounds write error in the FillUniColor function in utils.cpp when reading an image file by using cv::imread.	opencv	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Won't Fix	Won't Fix	Won't Fix	LIN9-4962
4140	CVE-2017-12603	Medium	High	OpenCV (Open Source Computer Vision Library) through 3.3 has an invalid write in the cv::RLByteStream::getBytes function in modules/imgcodecs/src/bitstrm.cpp when reading an image file by using cv::imread, as demonstrated by the 2-opencv-heapoverflow-fseek test case.	opencv	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Won't Fix	Won't Fix	Won't Fix	LIN9-4973
4141	CVE-2017-12602	High	High	OpenCV (Open Source Computer Vision Library) through 3.3 has a denial of service (memory consumption) issue, as demonstrated by the 10-opencv-dos-memory-exhaust test case.	opencv	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Won't Fix	Won't Fix	Won't Fix	LIN9-4981
4142	CVE-2017-12601	Medium	High	OpenCV (Open Source Computer Vision Library) through 3.3 has a buffer overflow in the cv::BmpDecoder::readData function in modules/imgcodecs/src/grfmt_bmp.cpp when reading an image file by using cv::imread, as demonstrated by the 4-buf-overflow-readData-memcpy test case.	opencv	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Won't Fix	Won't Fix	Won't Fix	LIN9-5018
4143	CVE-2017-12600	High	High	OpenCV (Open Source Computer Vision Library) through 3.3 has a denial of service (CPU consumption) issue, as demonstrated by the 11-opencv-dos-cpu-exhaust test case.	opencv	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Won't Fix	Won't Fix	Won't Fix	LIN9-5027
4144	CVE-2017-12599	Medium	High	OpenCV (Open Source Computer Vision Library) through 3.3 has an out-of-bounds read error in the function icvCvt_BGRA2BGR_8u_C4C3R when reading an image file by using cv::imread.	opencv	Unchanged	Won't Fix	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5008
4145	CVE-2017-12598	Medium	High	OpenCV (Open Source Computer Vision Library) through 3.3 has an out-of-bounds read error in the cv::RBaseStream::readBlock function in modules/imgcodecs/src/bitstrm.cpp when reading an image file by using cv::imread, as demonstrated by the 8-opencv-invalid-read-fread test case.	opencv	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Won't Fix	Won't Fix	Won't Fix	LIN9-5089
4146	CVE-2017-12597	Medium	High	OpenCV (Open Source Computer Vision Library) through 3.3 has an out-of-bounds write error in the function FillColorRow1 in utils.cpp when reading an image file by using cv::imread.	opencv	Unchanged	Won't Fix	9.0.0.11	10.0.0.0	Won't Fix	Won't Fix	Won't Fix	LIN9-5011
4147	CVE-2017-12588	HIGH	Critical	The zmq3 input and output modules in rsyslog before 8.28.0 interpreted description fields as format strings, possibly allowing a format string attack with unspecified impact.	rsyslog	Unchanged	8.0.0.21	9.0.0.10	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5074
4148	CVE-2017-12587	Medium	High	ImageMagick 7.0.6-1 has a large loop vulnerability in the ReadPWPImage function in coders\pwp.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5082
4149	CVE-2017-12566	Medium	Medium	In ImageMagick 7.0.6-2, a memory leak vulnerability was found in the function ReadMVGImage in coders/mvg.c, which allows attackers to cause a denial of service, related to the function ReadSVGImage in svg.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4968
4150	CVE-2017-12565	Medium	Medium	In ImageMagick 7.0.6-2, a memory leak vulnerability was found in the function ReadOneJNGImage in coders/png.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5093
4151	CVE-2017-12564	Medium	Medium	In ImageMagick 7.0.6-2, a memory leak vulnerability was found in the function ReadMATImage in coders/mat.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4955
4152	CVE-2017-12563	High	Medium	In ImageMagick 7.0.6-2, a memory exhaustion vulnerability was found in the function ReadPSDImage in coders/psd.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4946
4153	CVE-2017-12459	Medium	High	The bfd_mach_o_read_symtab_strtab function in bfd/mach-o.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29 and earlier, allows remote attackers to cause an out of bounds heap write and possibly achieve code execution via a crafted mach-o file.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5020
4154	CVE-2017-12458	Medium	High	The nlm_swap_auxiliary_headers_in function in bfd/nlmcode.h in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29 and earlier, allows remote attackers to cause an out of bounds heap read via a crafted nlm file.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5075
4155	CVE-2017-12457	Medium	High	The bfd_make_section_with_flags function in section.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29 and earlier, allows remote attackers to cause a NULL dereference via a crafted file.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4956
4156	CVE-2017-12456	Medium	High	The read_symbol_stabs_debugging_info function in rddbg.c in GNU Binutils 2.29 and earlier allows remote attackers to cause an out of bounds heap read via a crafted binary file.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4971
4157	CVE-2017-12455	Medium	High	The evax_bfd_print_emh function in vms-alpha.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29 and earlier, allows remote attackers to cause an out of bounds heap read via a crafted vms alpha file.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5014
4158	CVE-2017-12454	Medium	High	The _bfd_vms_slurp_egsd function in bfd/vms-alpha.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29 and earlier, allows remote attackers to cause an arbitrary memory read via a crafted vms alpha file.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5064
4159	CVE-2017-12453	Medium	High	The _bfd_vms_slurp_eeom function in libbfd.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29 and earlier, allows remote attackers to cause an out of bounds heap read via a crafted vms alpha file.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4963
4160	CVE-2017-12452	Medium	High	The bfd_mach_o_i386_canonicalize_one_relo c function in bfd/mach-o-i386.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29 and earlier, allows remote attackers to cause an out of bounds heap read via a crafted mach-o file.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5035
4161	CVE-2017-12451	Medium	High	The _bfd_xcoff_read_ar_hdr function in bfd/coff-rs6000.c and bfd/coff64-rs6000.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29 and earlier, allows remote attackers to cause an out of bounds stack read via a crafted COFF image file.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4974

	A	B	C	D	E	F	G	H	I	J	K	L	M
4162	CVE-2017-12450	Medium	High	The alpha_vms_object_p function in bfd/vms-alpha.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29 and earlier, allows remote attackers to cause an out of bounds heap write and possibly achieve code execution via a crafted vms alpha file.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4951
4163	CVE-2017-12449	Medium	High	The _bfd_vms_save_sized_string function in vms-misc.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29 and earlier, allows remote attackers to cause an out of bounds heap read via a crafted vms file.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4925
4164	CVE-2017-12448	Medium	High	The bfd_cache_close function in bfd/cache.c in the Binary File Descriptor (BFD) library (aka libbfd), as distributed in GNU Binutils 2.29 and earlier, allows remote attackers to cause a heap use after free and possibly achieve code execution via a crafted nested archive file. This issue occurs because incorrect functions are called during an attempt to release memory. The issue can be addressed by better input validation in the bfd_generic_archive_p function in bfd/archive.c.	binutils	Unchanged	8.0.0.23	9.0.0.11	10.17.41.7	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5057
4165	CVE-2017-12447	Medium	HIGH	GdkPixBuf (aka gdk-pixbuf), possibly 2.32.2, as used by GNOME Nautilus 3.14.3 on Ubuntu 16.04, allows attackers to cause a denial of service (stack corruption) or possibly have unspecified other impact via a crafted file folder.	gdk-pixbuf	Unchanged	8.0.0.30	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN1018-3754
4166	CVE-2017-12435	High	High	In ImageMagick 7.0.6-1, a memory exhaustion vulnerability was found in the function ReadSUNImage in coders/sun.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4982
4167	CVE-2017-12434	Medium	Medium	In ImageMagick 7.0.6-1, a missing NULL check vulnerability was found in the function ReadMATImage in coders/mat.c, which allows attackers to cause a denial of service (assertion failure) in DestroyImageInfo in image.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5050
4168	CVE-2017-12433	Medium	Medium	In ImageMagick 7.0.6-1, a memory leak vulnerability was found in the function ReadPESImage in coders/pes.c, which allows attackers to cause a denial of service, related to ResizeMagickMemory in memory.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5068
4169	CVE-2017-12432	High	Medium	In ImageMagick 7.0.6-1, a memory exhaustion vulnerability was found in the function ReadPCXImage in coders/pcx.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5080
4170	CVE-2017-12431	Medium	Medium	In ImageMagick 7.0.6-1, a use-after-free vulnerability was found in the function ReadWMFImage in coders/wmf.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5053
4171	CVE-2017-12430	High	High	In ImageMagick 7.0.6-1, a memory exhaustion vulnerability was found in the function ReadMPCImage in coders/mpc.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4999
4172	CVE-2017-12429	High	High	In ImageMagick 7.0.6-1, a memory exhaustion vulnerability was found in the function ReadMIFFImage in coders/miff.c, which allows attackers to cause a denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5055
4173	CVE-2017-12428	Medium	High	In ImageMagick 7.0.6-1, a memory leak vulnerability was found in the function ReadWMFImage in coders/wmf.c, which allows attackers to cause a denial of service in CloneDrawInfo in draw.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5085
4174	CVE-2017-12427	Medium	Medium	The ProcessMSLScript function in coders/msl.c in ImageMagick before 6.9.9-5 and 7.x before 7.0.6-5 allows remote attackers to cause a denial of service (memory leak) via a crafted file, related to the WriteMSLImage function.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5051
4175	CVE-2017-12424	HIGH	Critical	In shadow before 4.5, the newusers tool could be made to manipulate internal data structures in ways unintended by the authors. Malformed input may lead to crashes (with a buffer overflow or other memory corruption) or other unspecified behaviors. This crosses a privilege boundary in, for example, certain web-hosting environments in which a Control Panel allows an unprivileged user account to create subaccounts.	shadow	Unchanged	8.0.0.21	9.0.0.10	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4975
4176	CVE-2017-12418	Medium	High	ImageMagick 7.0.6-5 has memory leaks in the parse8BIMW and format8BIM functions in coders/meta.c, related to the WriteImage function in MagickCore/constitute.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4967
4177	CVE-2017-12380	HIGH	High	ClamAV AntiVirus software versions 0.99.2 and prior contain a vulnerability that could allow an unauthenticated, remote attacker to cause a denial of service (DoS) condition on an affected device. The vulnerability is due to improper input validation checking mechanisms in mbox.c during certain mail parsing functions of the ClamAV software. An unauthenticated, remote attacker could exploit this vulnerability by sending a crafted email to the affected device. An exploit could trigger a NULL pointer dereference condition when ClamAV scans the malicious email, which may result in a DoS condition.	clamav	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3194
4178	CVE-2017-12379	HIGH	Critical	ClamAV AntiVirus software versions 0.99.2 and prior contain a vulnerability that could allow an unauthenticated, remote attacker to cause a denial of service (DoS) condition or potentially execute arbitrary code on an affected device. The vulnerability is due to improper input validation checking mechanisms in the message parsing function on an affected system. An unauthenticated, remote attacker could exploit this vulnerability by sending a crafted email to the affected device. This action could cause a messageAddArgument (in message.c) buffer overflow condition when ClamAV scans the malicious email, allowing the attacker to potentially cause a DoS condition or execute arbitrary code on an affected device.	clamav	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3201

	A	B	C	D	E	F	G	H	I	J	K	L	M
4179	CVE-2017-12378	HIGH	Medium	ClamAV AntiVirus software versions 0.99.2 and prior contain a vulnerability that could allow an unauthenticated, remote attacker to cause a denial of service (DoS) condition on an affected device. The vulnerability is due to improper input validation checking mechanisms of .tar (Tape Archive) files sent to an affected device. A successful exploit could cause a checksum buffer over-read condition when ClamAV scans the malicious .tar file, potentially allowing the attacker to cause a DoS condition on the affected device.	clamav	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3205
4180	CVE-2017-12377	HIGH	Critical	ClamAV AntiVirus software versions 0.99.2 and prior contain a vulnerability that could allow an unauthenticated, remote attacker to cause a denial of service (DoS) condition or potentially execute arbitrary code on an affected device. The vulnerability is due to improper input validation checking mechanisms in mew packet files sent to an affected device. A successful exploit could cause a heap-based buffer over-read condition in mew.c when ClamAV scans the malicious file, allowing the attacker to cause a DoS condition or potentially execute arbitrary code on the affected device.	clamav	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3196
4181	CVE-2017-12376	HIGH	High	ClamAV AntiVirus software versions 0.99.2 and prior contain a vulnerability that could allow an unauthenticated, remote attacker to cause a denial of service (DoS) condition or potentially execute arbitrary code on an affected device. The vulnerability is due to improper input validation checking mechanisms when handling Portable Document Format (.pdf) files sent to an affected device. An unauthenticated, remote attacker could exploit this vulnerability by sending a crafted .pdf file to an affected device. This action could cause a handle_pdfname (in pdf.c) buffer overflow when ClamAV scans the malicious file, allowing the attacker to cause a DoS condition or potentially execute arbitrary code.	clamav	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3231
4182	CVE-2017-12375	HIGH	High	The ClamAV AntiVirus software versions 0.99.2 and prior contain a vulnerability that could allow an unauthenticated, remote attacker to cause a denial of service (DoS) condition on an affected device. The vulnerability is due to a lack of input validation checking mechanisms during certain mail parsing functions (the rfc2047 function in mbox.c). An unauthenticated, remote attacker could exploit this vulnerability by sending a crafted email to the affected device. This action could cause a buffer overflow condition when ClamAV scans the malicious email, allowing the attacker to potentially cause a DoS condition on an affected device.	clamav	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3237
4183	CVE-2017-12374	HIGH	High	The ClamAV AntiVirus software versions 0.99.2 and prior contain a vulnerability that could allow an unauthenticated, remote attacker to cause a denial of service (DoS) condition on an affected device. The vulnerability is due to a lack of input validation checking mechanisms during certain mail parsing operations (mbox.c operations on bounce messages). If successfully exploited, the ClamAV software could allow a variable pointing to the mail body which could cause a used after being free (use-after-free) instance which may lead to a disruption of services on an affected device to include a denial of service condition.	clamav	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-3207
4184	CVE-2017-12193	MEDIUM	Medium	The assoc_array_insert_into_terminal_node function in lib/assoc_array.c in the Linux kernel before 4.13.11 mishandles node splitting, which allows local users to cause a denial of service (NULL pointer dereference and panic) via a crafted application, as demonstrated by the keyring key type, and key addition and link creation operations.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2621
4185	CVE-2017-12192	MEDIUM	Medium	A vulnerability was found in the Key Management sub component of the Linux kernel, where when trying to issue a KEYTCL_READ on negative key would lead to a NULL pointer dereference. A local attacker could use this flaw to crash the kernel.	linux	Unchanged	8.0.0.23	9.0.0.12	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5571
4186	CVE-2017-12190	MEDIUM	Medium	The bio_map_user_iov and bio_unmap_user functions in block/bio.c in the Linux kernel before 4.13.8 do unbalanced refcounting when a SCSI I/O vector has small consecutive buffers belonging to the same page. The bio_add_pc_page function merges them into one, but the page reference is never dropped. This causes a memory leak and possible system lockup (exploitable against the host OS by a guest OS user, if a SCSI disk is passed through to a virtual machine) due to an out-of-memory condition.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2614
4187	CVE-2017-12188	MEDIUM	High	arch/x86/kvm/mmu.c in the Linux kernel through 4.13.5, when nested virtualisation is used, does not properly traverse guest pagetable entries to resolve a guest virtual address, which allows L1 guest OS users to execute arbitrary code on the host OS or cause a denial of service (incorrect index during page walking, and host OS crash), aka an MMU potential stack buffer overrun.	linux	Unchanged	Not vulnerable	9.0.0.12	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5548
4188	CVE-2017-12187	HIGH	Critical	xorg-x11-server before 1.19.5 was missing length validation in RENDER extension allowing malicious X client to cause X server to crash or possibly execute arbitrary code.	xorg	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3240
4189	CVE-2017-12186	HIGH	Critical	xorg-x11-server before 1.19.5 was missing length validation in X-Resource extension allowing malicious X client to cause X server to crash or possibly execute arbitrary code.	xorg	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3176
4190	CVE-2017-12185	HIGH	Critical	xorg-x11-server before 1.19.5 was missing length validation in MIT-SCREEN-SAVER extension allowing malicious X client to cause X server to crash or possibly execute arbitrary code.	xorg	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3200

4192	CVE-2017-12183	HIGH	Critical	xorg-x11-server before 1.19.5 was missing length validation in XFIXES extension allowing malicious X client to cause X server to crash or possibly execute arbitrary code.	xorg	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3215
4193	CVE-2017-12182	HIGH	Critical	xorg-x11-server before 1.19.5 was missing length validation in XFree86 DRI extension allowing malicious X client to cause X server to crash or possibly execute arbitrary code.	xorg	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3241
4194	CVE-2017-12181	HIGH	Critical	xorg-x11-server before 1.19.5 was missing length validation in XFree86 DGA extension allowing malicious X client to cause X server to crash or possibly execute arbitrary code.	xorg	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3185
4195	CVE-2017-12180	HIGH	Critical	xorg-x11-server before 1.19.5 was missing length validation in XFree86 VidModeExtension allowing malicious X client to cause X server to crash or possibly execute arbitrary code.	xorg	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3236
4196	CVE-2017-12179	HIGH	Critical	xorg-x11-server before 1.19.5 was vulnerable to integer overflow in (S)ProcXIBarrierReleasePointer functions allowing malicious X client to cause X server to crash or possibly execute arbitrary code.	xorg	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3211
4197	CVE-2017-12178	HIGH	Critical	xorg-x11-server before 1.19.5 had wrong extra length check in ProcXIChangeHierarchy function allowing malicious X client to cause X server to crash or possibly execute arbitrary code.	xorg	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3230
4198	CVE-2017-12177	HIGH	Critical	xorg-x11-server before 1.19.5 was vulnerable to integer overflow in ProcDbeGetVisualInfo function allowing malicious X client to cause X server to crash or possibly execute arbitrary code.	xorg	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3174
4199	CVE-2017-12176	HIGH	Critical	xorg-x11-server before 1.19.5 was missing extra length validation in ProcEstablishConnection function allowing malicious X client to cause X server to crash or possibly execute arbitrary code.	xorg	Unchanged	8.0.0.25	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3186
4200	CVE-2017-12173	MEDIUM	HIGH	It was found that sssd's sysdb_search_user_by_upn_res() function before 1.16.0 did not sanitize requests when querying its local cache and was vulnerable to injection. In a centralized login environment, if a password hash was locally cached for a given user, an authenticated attacker could use this flaw to retrieve it.	sssd	Unchanged	Not vulnerable	Won't Fix	Won't Fix	10.18.44.15	Won't Fix	Won't Fix	LIN10-4371
4201	CVE-2017-12172	HIGH	Medium	PostgreSQL 10.x before 10.1, 9.6.x before 9.6.6, 9.5.x before 9.5.10, 9.4.x before 9.4.15, 9.3.x before 9.3.20, and 9.2.x before 9.2.24 runs under a non-root operating system account, and database superusers have effective ability to run arbitrary code under that system account. PostgreSQL provides a script for starting the database server during system boot. Packages of PostgreSQL for many operating systems provide their own, packager-authored startup implementations. Several implementations use a log file name that the database superuser can replace with a symbolic link. As root, they open(), chmod() and/or chown() this log file name. This often suffices for the database superuser to escalate to root privileges when root starts the server.	postgresql	Unchanged	8.0.0.24	9.0.0.13	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2608
4202	CVE-2017-12168	MEDIUM	Medium	The access_pmu_evcntr function in arch/arm64/kvm/sys_regs.c in the Linux kernel before 4.8.11 allows privileged KVM guest OS users to cause a denial of service (assertion failure and host OS crash) by accessing the Performance Monitors Cycle Count Register (PMCCNTR).	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5475
4203	CVE-2017-12166	MEDIUM	High	OpenVPN versions before 2.3.3 and 2.4.x before 2.4.4 are vulnerable to a buffer overflow vulnerability when key-method 1 is used, possibly resulting in code execution.	openvpn	Unchanged	8.0.0.30	9.0.0.21	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5519
4204	CVE-2017-12164	MEDIUM	MEDIUM	A flaw was discovered in gdm 3.24.1 where gdm greeter was no longer setting the ran_once boolean during autologin. If autologin was enabled for a victim, an attacker could simply select 'login as another user' to unlock their screen.	gdm	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-7245
4205	CVE-2017-12163	MEDIUM	HIGH	All versions of Samba, client with write access to a share can cause server memory contents to be written into a file or printer. https://www.samba.org/samba/security/CVE-2017-12163.html	samba	Unchanged	8.0.0.24	9.0.0.13	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2480
4206	CVE-2017-12154	LOW	High	The prepare_vmcs02 function in arch/x86/kvm/vmx.c in the Linux kernel through 4.13.3 does not ensure that the CR8-load exiting and CR8-store exiting L0 vmcs02 controls exist in cases where L1 omits the use TPR shadow vmcs12 control, which allows KVM L2 guest OS users to obtain read and write access to the hardware CR8 register.	linux	Unchanged	8.0.0.23	9.0.0.11	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5428
4207	CVE-2017-12153	MEDIUM	Medium	A security flaw was discovered in the nl80211_set_rekey_data() function in net/wireless/nl80211.c in the Linux kernel through 4.13.3. This function does not check whether the required attributes are present in a Netlink request. This request can be issued by a user with the CAP_NET_ADMIN capability and may result in a NULL pointer dereference and system crash.	linux	Unchanged	8.0.0.23	9.0.0.11	10.17.41.2	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5470
4208	CVE-2017-12151	MEDIUM	HIGH	In Samba 4.1.0 to 4.6.7, a man in the middle attack can read and may alter confidential documents transferred via a client connection, which are reached via DFS redirect when the original connection used SMB3. https://www.samba.org/samba/security/CVE-2017-12151.html	samba	Unchanged	8.0.0.24	9.0.0.13	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2487
4209	CVE-2017-12150	MEDIUM	HIGH	A man in the middle attack may hijack client connections in Samba 3.0.25 to 4.6.7, reference https://www.samba.org/samba/security/CVE-2017-12150.html	samba	Unchanged	8.0.0.24	9.0.0.13	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2493
4210	CVE-2017-12146	MEDIUM	High	The driver_override implementation in drivers/base/platform.c in the Linux kernel before 4.12.1 allows local users to gain privileges by leveraging a race condition between a read operation and a store operation that involve different overrides.	linux	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5375

	A	B	C	D	E	F	G	H	I	J	K	L	M
4211	CVE-2017-12140	High	Medium	The ReadDCMImage function in coders\ dcm.c in ImageMagick 7.0.6-1 has an integer signedness error leading to excessive memory consumption via a crafted DCM file.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5069
4212	CVE-2017-12133	MEDIUM	Medium	The DNS stub resolver in the GNU C Library (glibc) before version 2.26, when EDNS support is enabled, will solicit large UDP responses from name servers, potentially simplifying off-path DNS spoofing attackers due to IP fragmentation.	glibc	Unchanged	8.0.0.25	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5286
4213	CVE-2017-12132	Medium	Medium	The DNS stub resolver in the GNU C Library (aka glibc or libc6) before version 2.26, when EDNS support is enabled, will solicit large UDP responses from name servers, potentially simplifying off-path DNS spoofing attacks due to IP fragmentation.	glibc	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4972
4214	CVE-2017-11755	Medium	Medium	The WritePICONImage function in coders/xpm.c in ImageMagick 7.0.6-4 allows remote attackers to cause a denial of service (memory leak) via a crafted file that is mishandled in an AcquireSemaphoreInfo call.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4970
4215	CVE-2017-11754	Medium	Medium	The WritePICONImage function in coders/xpm.c in ImageMagick 7.0.6-4 allows remote attackers to cause a denial of service (memory leak) via a crafted file that is mishandled in an OpenPixelCache call.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4983
4216	CVE-2017-11753	Medium	Medium	The GetImageDepth function in MagickCore/attribute.c in ImageMagick 7.0.6-4 might allow remote attackers to cause a denial of service (heap-based buffer over-read) via a crafted Flexible Image Transport System (FITS) file.	imagemagick	Unchanged	Not vulnerable	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4928
4217	CVE-2017-11752	Medium	Medium	The ReadMAGICKImage function in coders/magick.c in ImageMagick 7.0.6-4 allows remote attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4938
4218	CVE-2017-11751	Medium	Medium	The WritePICONImage function in coders/xpm.c in ImageMagick 7.0.6-4 allows remote attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4997
4219	CVE-2017-11750	Medium	Medium	The ReadOneJNGImage function in coders/png.c in ImageMagick 6.9.9-4 and 7.0.6-4 allows remote attackers to cause a denial of service (NULL pointer dereference) via a crafted file.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5000
4220	CVE-2017-11742	Medium	High	The writeRandomBytes_RtlGenRandom function in xmlparse.c in libexpat in Expat 2.2.1 and 2.2.2 on Windows allows local users to gain privileges via a Trojan horse ADVAPI32.DLL in the current working directory because of an untrusted search path, aka DLL hijacking.	expat	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5028
4221	CVE-2017-11735	Medium	Medium	The vorbis_block_clear function in lib/block.c in Xiph.Org libvorbis 1.3.5 allows remote attackers to cause a denial of service (NULL pointer dereference and application crash) via a crafted ogg file.	libvorbis	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5016
4222	CVE-2017-11724	Medium	Medium	The ReadMATImage function in coders/mat.c in ImageMagick through 6.9.9-3 and 7.x through 7.0.6-3 has memory leaks involving the quantum_info and clone_info data structures.	imagemagick	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5046
4223	CVE-2017-11720	High	Critical	There is a division-by-zero vulnerability in LAME 3.99.5, caused by a malformed input file.	lame	Unchanged	8.0.0.28	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5026
4224	CVE-2017-11719	Medium	High	The dnxhd_decode_header function in libavcodec/dnxhddec.c in FFmpeg through 3.3.2 allows remote attackers to cause a denial of service (out-of-array access) or possibly have unspecified other impact via a crafted DNxHD file.	ffmpeg	Unchanged	Won't Fix	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5087
4225	CVE-2017-11714	Medium	High	psi/ztoken.c in Artifex Ghostscript 9.21 mishandles references to the scanner state structure, which allows remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via a crafted PostScript document, related to an out-of-bounds read in the igc_reloc_struct_ptr function in psi/igc.c.	ghostscript	Unchanged	8.0.0.21	9.0.0.10	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4980
4226	CVE-2017-11698	MEDIUM	High	Heap-based buffer overflow in the __get_page function in lib/dbm/src/h_page.c in Mozilla Network Security Services (NSS) allows context-dependent attackers to have unspecified impact using a crafted cert8.db file.	nss	Unchanged	Investigate	Investigate	Investigate	Investigate	Investigate	10.20.9.0	LIN10-2944
4227	CVE-2017-11697	MEDIUM	High	The __hash_open function in hash.c:229 in Mozilla Network Security Services (NSS) allows context-dependent attackers to cause a denial of service (floating point exception and crash) via a crafted cert8.db file.	nss	Unchanged	Investigate	Investigate	Investigate	Investigate	Investigate	10.20.9.0	LIN10-2933
4228	CVE-2017-11696	MEDIUM	High	Heap-based buffer overflow in the __hash_open function in lib/dbm/src/hash.c in Mozilla Network Security Services (NSS) allows context-dependent attackers to have unspecified impact using a crafted cert8.db file.	nss	Unchanged	Investigate	Investigate	Investigate	Investigate	Investigate	10.20.9.0	LIN10-2931
4229	CVE-2017-11695	MEDIUM	High	Heap-based buffer overflow in the alloc_segs function in lib/dbm/src/hash.c in Mozilla Network Security Services (NSS) allows context-dependent attackers to have unspecified impact using a crafted cert8.db file.	nss	Unchanged	Investigate	Investigate	Investigate	Investigate	Investigate	10.20.9.0	LIN10-2920
4230	CVE-2017-11684	MEDIUM	High	There is an illegal address access in the build_table function in libavcodec/bitstream.c of Libav 12.1 that will lead to remote denial of service via crafted input.	libav	Unchanged	8.0.0.25	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4789
4231	CVE-2017-11671	LOW	Medium	Under certain circumstances, the ix86_expand_builtin function in i386.c in GNU Compiler Collection (GCC) version 4.6, 4.7, 4.8, 4.9, 5 before 5.5, and 6 before 6.4 will generate instruction sequences that clobber the status flag of the RDRAND and RDSEED intrinsics before it can be read, potentially causing failures of these instructions to go unreported.	gcc	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4793
4232	CVE-2017-11665	Medium	High	The ff_amf_get_field_value function in libavformat/rtmppkt.c in FFmpeg 3.3.2 allows remote RTMP servers to cause a denial of service (Segmentation Violation and application crash) via a crafted stream.	ffmpeg	Unchanged	Won't Fix	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4947
4233	CVE-2017-11644	MEDIUM	Medium	When ImageMagick 7.0.6-1 processes a crafted file in convert, it can lead to a Memory Leak in the ReadMATImage() function in coders/mat.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4864

	A	B	C	D	E	F	G	H	I	J	K	L	M
4234	CVE-2017-11640	MEDIUM	Medium	When ImageMagick 7.0.6-1 processes a crafted file in convert, it can lead to an address access exception in the WritePTIFImage() function in coders/tiff.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4806
4235	CVE-2017-11639	MEDIUM	Medium	When ImageMagick 7.0.6-1 processes a crafted file in convert, it can lead to a heap-based buffer over-read in the WriteCIPImage() function in coders/cip.c, related to the GetPixelLuma function in MagickCore/pixel-accessor.h.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4856
4236	CVE-2017-11628	MEDIUM	High	In PHP before 5.6.31, 7.x before 7.0.21, and 7.1.x before 7.1.7, a stack-based buffer overflow in the zend_ini_do_op() function in Zend/zend_ini_parser.c could cause a denial of service or potentially allow executing code. NOTE: this is only relevant for PHP applications that accept untrusted input (instead of the system's php.ini file) for the parse_ini_string or parse_ini_file function, e.g., a web application for syntax validation of php.ini directives.	php	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4831
4237	CVE-2017-11613	MEDIUM	Medium	In LibTIFF 4.0.8, there is a denial of service vulnerability in the TIFFOpen function. A crafted input will lead to a denial of service attack. During the TIFFOpen process, td_imagelength is not checked. The value of td_imagelength can be directly controlled by an input file. In the ChopUpSingleUncompressedStrip function, the _TIFFCheckMalloc function is called based on td_imagelength. If we set the value of td_imagelength close to the amount of system memory, it will hang the system or trigger the OOM killer.	libtiff	Unchanged	8.0.0.27	9.0.0.18	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4761
4238	CVE-2017-11600	MEDIUM	High	net/xfrm/xfrm_policy.c in the Linux kernel through 4.12.3, when CONFIG_XFRM_MIGRATE is enabled, does not ensure that the dir value of xfrm_userpolicy_id is XFRM_POLICY_MAX or less, which allows local users to cause a denial of service (out-of-bounds access) or possibly have unspecified other impact via an XFRM_MSG_MIGRATE xfrm Netlink message.	linux	Unchanged	8.0.0.22	9.0.0.11	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4775
4239	CVE-2017-11577	MEDIUM	High	FontForge 20161012 is vulnerable to a buffer over-read in getsid (parsettf.c) resulting in DoS or code execution via a crafted otf file.	fontforge	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4784
4240	CVE-2017-11576	MEDIUM	Medium	FontForge 20161012 does not ensure a positive size in a weight vector memcpy call in readcfftopdict (parsettf.c) resulting in DoS via a crafted otf file.	fontforge	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4758
4241	CVE-2017-11575	MEDIUM	High	FontForge 20161012 is vulnerable to a buffer over-read in strnmatch (char.c) resulting in DoS or code execution via a crafted otf file, related to a call from the readttfcopyrights function in parsettf.c.	fontforge	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4825
4242	CVE-2017-11574	MEDIUM	High	FontForge 20161012 is vulnerable to a heap-based buffer overflow in readcffset (parsettf.c) resulting in DoS or code execution via a crafted otf file.	fontforge	Unchanged	Won't Fix	Won't Fix	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4776

4255	CVE-2017-11543	HIGH	Critical	tcpdump 4.9.0 has a buffer overflow in the sliplink_print function in print-sl.c.	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4841
4256	CVE-2017-11542	HIGH	Critical	tcpdump 4.9.0 has a heap-based buffer over-read in the pimv1_print function in print-pim.c.	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4796
4257	CVE-2017-11541	HIGH	Critical	tcpdump 4.9.0 has a heap-based buffer over-read in the lldp_print function in print-lldp.c, related to util-print.c.	tcpdump	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4820
4258	CVE-2017-11540	MEDIUM	Medium	When ImageMagick 7.0.6-1 processes a crafted file in convert, it can lead to a heap-based buffer over-read in the GetPixelIndex() function, called from the WritePICONImage function in coders/xpm.c.	imagemagick	Unchanged	Not vulnerable	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4834
4259	CVE-2017-11539	MEDIUM	Medium	When ImageMagick 7.0.6-1 processes a crafted file in convert, it can lead to a Memory Leak in the ReadOnePNGImage() function in coders/png.c.	imagemagick	Unchanged	8.0.0.28	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4794

	A	B	C	D	E	F	G	H	I	J	K	L	M
4260	CVE-2017-11538	MEDIUM	Medium	When ImageMagick 7.0.6-1 processes a crafted file in convert, it can lead to a Memory Leak in the WriteOnePNGImage() function in coders/png.c.	imagemagick	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4764
4261	CVE-2017-11537	MEDIUM	Medium	When ImageMagick 7.0.6-1 processes a crafted file in convert, it can lead to a Floating Point Exception (FPE) in the WritePALMImage() function in coders/palm.c, related to an incorrect bits-per-pixel calculation.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4846
4262	CVE-2017-11536	MEDIUM	Medium	When ImageMagick 7.0.6-1 processes a crafted file in convert, it can lead to a Memory Leak in the WriteJP2Image() function in coders/jp2.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4824
4263	CVE-2017-11535	MEDIUM	Medium	When ImageMagick 7.0.6-1 processes a crafted file in convert, it can lead to a heap-based buffer over-read in the WritePSImage() function in coders/ps.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4773
4264	CVE-2017-11534	MEDIUM	Medium	When ImageMagick 7.0.6-1 processes a crafted file in convert, it can lead to a Memory Leak in the lite_font_map() function in coders/wmf.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4751
4265	CVE-2017-11533	MEDIUM	Medium	When ImageMagick 7.0.6-1 processes a crafted file in convert, it can lead to a heap-based buffer over-read in the WriteUILImage() function in coders/uil.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4833
4266	CVE-2017-11532	MEDIUM	Medium	When ImageMagick 7.0.6-1 processes a crafted file in convert, it can lead to a Memory Leak in the WriteMPCImage() function in coders/mpc.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4805
4267	CVE-2017-11531	MEDIUM	Medium	When ImageMagick 7.0.6-1 processes a crafted file in convert, it can lead to a Memory Leak in the WriteHISTOGRAMImage() function in coders/histogram.c.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4785
4268	CVE-2017-11530	HIGH	Medium	The ReadEPTImage function in coders/ept.c in ImageMagick before 6.9.9-0 and 7.x before 7.0.6-1 allows remote attackers to cause a denial of service (memory consumption) via a crafted file.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4817
4269	CVE-2017-11529	MEDIUM	Medium	The ReadMATImage function in coders/mat.c in ImageMagick before 6.9.9-0 and 7.x before 7.0.6-1 allows remote attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4755
4270	CVE-2017-11528	MEDIUM	Medium	The ReadDIBImage function in coders/dib.c in ImageMagick before 6.9.9-0 and 7.x before 7.0.6-1 allows remote attackers to cause a denial of service (memory leak) via a crafted file.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4858
4271	CVE-2017-11527	HIGH	Medium	The ReadDPXImage function in coders/dpx.c in ImageMagick before 6.9.9-0 and 7.x before 7.0.6-1 allows remote attackers to cause a denial of service (memory consumption) via a crafted file.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4815
4272	CVE-2017-11526	HIGH	Medium	The ReadOneMNGImage function in coders/png.c in ImageMagick before 6.9.9-0 and 7.x before 7.0.6-1 allows remote attackers to cause a denial of service (large loop and CPU consumption) via a crafted file.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4842
4273	CVE-2017-11525	HIGH	Medium	The ReadCINImage function in coders/cin.c in ImageMagick before 6.9.9-0 and 7.x before 7.0.6-1 allows remote attackers to cause a denial of service (memory consumption) via a crafted file.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4777
4274	CVE-2017-11524	MEDIUM	Medium	The WriteBlob function in MagickCore/blob.c in ImageMagick before 6.9.8-10 and 7.x before 7.6.0-0 allows remote attackers to cause a denial of service (assertion failure and application exit) via a crafted file.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4763
4275	CVE-2017-11523	HIGH	Medium	The ReadTXTImage function in coders/txt.c in ImageMagick through 6.9.9-0 and 7.x through 7.0.6-1 allows remote attackers to cause a denial of service (infinite loop) via a crafted file, because the end-of-file condition is not considered.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4807
4276	CVE-2017-11522	MEDIUM	Medium	The WriteOnePNGImage function in coders/png.c in ImageMagick through 6.9.9-0 and 7.x through 7.0.6-1 allows remote attackers to cause a denial of service (NULL pointer dereference) via a crafted file.	imagemagick	Unchanged	Not vulnerable	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4868
4277	CVE-2017-11505	HIGH	Medium	The ReadOneJNGImage function in coders/png.c in ImageMagick through 6.9.9-0 and 7.x through 7.0.6-1 allows remote attackers to cause a denial of service (large loop and CPU consumption) via a malformed JNG file.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4821
4278	CVE-2017-11478	HIGH	Medium	The ReadOneDJVUImage function in coders/djvu.c in ImageMagick through 6.9.9-0 and 7.x through 7.0.6-1 allows remote attackers to cause a denial of service (infinite loop and CPU consumption) via a malformed DJVU image.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4832
4279	CVE-2017-11473	HIGH	High	Buffer overflow in the mp_override_legacy_irq() function in arch/x86/kernel/acpi/boot.c in the Linux kernel through 4.12.2 allows local users to gain privileges via a crafted ACPI table.	linux	Unchanged	8.0.0.21	9.0.0.12	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4769
4280	CVE-2017-11472	LOW	High	The acpi_ns_terminate() function in drivers/acpi/acpica/nsutils.c in the Linux kernel before 4.12 does not flush the operand cache and causes a kernel stack dump, which allows local users to obtain sensitive information from kernel memory and bypass the KASLR protection mechanism (in the kernel through 4.9) via a crafted ACPI table.	linux	Unchanged	8.0.0.23	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4781
4281	CVE-2017-11468	MEDIUM	High	Docker Registry before 2.6.2 in Docker Distribution does not properly restrict the amount of content accepted from a user, which allows remote attackers to cause a denial of service (memory consumption) via the manifest endpoint.	docker	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4844
4282	CVE-2017-11465	HIGH	Critical	The parser_yyerror function in the UTF-8 parser in Ruby 2.4.1 allows attackers to cause a denial of service (invalid write or read) or possibly have unspecified other impact via a crafted Ruby script, related to the parser_tokadd_utf8 function in parse.y. NOTE: this might have security relevance as a bypass of a $SAFE protection mechanism.	ruby	Unchanged	Not vulnerable	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4771
4283	CVE-2017-11464	MEDIUM	High	A SIGFPE is raised in the function box_blur_line of rsvg-filter.c in GNOME librsvg 2.40.17 during an attempted parse of a crafted SVG file, because of incorrect protection against division by zero.	librsvg	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4863

	A	B	C	D	E	F	G	H	I	J	K	L	M
4284	CVE-2017-11462	HIGH	Critical	Double free vulnerability in MIT Kerberos 5 (aka krb5) allows attackers to have unspecified impact via vectors involving automatic deletion of security contexts on error.	krb5	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5329
4285	CVE-2017-11450	Medium	High	coders/jpeg.c in ImageMagick before 7.0.6-1 allows remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via JPEG data that is too short.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4765
4286	CVE-2017-11449	Medium	High	coders/mpc.c in ImageMagick before 7.0.6-1 does not enable seekable streams and thus cannot validate blob sizes, which allows remote attackers to cause a denial of service (application crash) or possibly have unspecified other impact via an image received from stdin.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4835
4287	CVE-2017-11448	Medium	Medium	The ReadJPEGImage function in coders/jpeg.c in ImageMagick before 7.0.6-1 allows remote attackers to obtain sensitive information from uninitialized memory locations via a crafted file.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4787
4288	CVE-2017-11447	Medium	Medium	The ReadSCREENSHOTImage function in coders/screenshot.c in ImageMagick before 7.0.6-1 has memory leaks, causing denial of service.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4801
4289	CVE-2017-11446	High	Medium	The ReadPESImage function in coders\ pes.c in ImageMagick 7.0.6-1 has an infinite loop vulnerability that can cause CPU exhaustion via a crafted PES file.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4819
4290	CVE-2017-11434	LOW	Medium	The dhcp_decode function in slirp/bootp.c in QEMU (aka Quick Emulator) allows local guest OS users to cause a denial of service (out-of-bounds read and QEMU process crash) via a crafted DHCP options string.	qemu	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4780
4291	CVE-2017-11423	MEDIUM	Medium	The cabd_read_string function in mspack/cabd.c in libmspack 0.5alpha, as used in ClamAV 0.99.2 and other products, allows remote attackers to cause a denial of service (stack-based buffer over-read and application crash) via a crafted CAB file.	clamav & libmspack	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4778
4292	CVE-2017-11411	High	High	In Wireshark through 2.0.13 and 2.2.x through 2.2.7, the openSAFETY dissector could crash or exhaust system memory. This was addressed in epan/dissectors/packet-opensafety.c by adding length validation. NOTE: this vulnerability exists because of an incomplete fix for CVE-2017-9350.	wireshark	Unchanged	8.0.0.22	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4782
4293	CVE-2017-11410	High	High	In Wireshark through 2.0.13 and 2.2.x through 2.2.7, the WBXML dissector could go into an infinite loop, triggered by packet injection or a malformed capture file. This was addressed in epan/dissectors/packet-wbxml.c by adding validation of the relationships between indexes and lengths. NOTE: this vulnerability exists because of an incomplete fix for CVE-2017-7702.	wireshark	Unchanged	Not vulnerable	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4750
4294	CVE-2017-11409	High	High	In Wireshark 2.0.0 to 2.0.13, the GPRS LLC dissector could go into a large loop. This was addressed in epan/dissectors/packet-gprs-llc.c by using a different integer data type.	wireshark	Unchanged	8.0.0.21	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4849
4295	CVE-2017-11408	Medium	High	In Wireshark 2.2.0 to 2.2.7 and 2.0.0 to 2.0.13, the AMQP dissector could crash. This was addressed in epan/dissectors/packet-amqp.c by checking for successful list dissection.	wireshark	Unchanged	Not vulnerable	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4818
4296	CVE-2017-11407	Medium	High	In Wireshark 2.2.0 to 2.2.7 and 2.0.0 to 2.0.13, the MQ dissector could crash. This was addressed in epan/dissectors/packet-mq.c by validating the fragment length before a reassembly attempt.	wireshark	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4840
4297	CVE-2017-11406	High	High	In Wireshark 2.2.0 to 2.2.7 and 2.0.0 to 2.0.13, the DOCSIS dissector could go into an infinite loop. This was addressed in plugins/docsis/packet-docsis.c by rejecting invalid Frame Control parameter values.	wireshark	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4774
4298	CVE-2017-11399	MEDIUM	High	Integer overflow in the ape_decode_frame function in libavcodec/apedec.c in FFmpeg through 3.3.2 allows remote attackers to cause a denial of service (out-of-array access and application crash) or possibly have unspecified other impact via a crafted APE file.	ffmpeg	Unchanged	Not vulnerable	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4798
4299	CVE-2017-11368	MEDIUM	Medium	In MIT Kerberos 5 (aka krb5) 1.7 and later, an authenticated attacker can cause a KDC assertion failure by sending invalid S4U2Self or S4U2Proxy requests.	krb5	Unchanged	8.0.0.21	9.0.0.10	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4926
4300	CVE-2017-11362	High	Critical	In PHP 7.x before 7.0.21 and 7.1.x before 7.1.7, ext/intl/msgformat/msgformat_parse.c does not restrict the locale length, which allows remote attackers to cause a denial of service (stack-based buffer overflow and application crash) or possibly have unspecified other impact within International Components for Unicode (ICU) for C/C++ via a long first argument to the msgfmt_parse_message function.	php	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4826
4301	CVE-2017-11360	Medium	Medium	The ReadRLEImage function in coders\ rle.c in ImageMagick 7.0.6-1 has a large loop vulnerability via a crafted rle file that triggers a huge number_pixels value.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4843
4302	CVE-2017-11352	Medium	Medium	In ImageMagick before 7.0.5-10, a crafted RLE image can trigger a crash because of incorrect EOF handling in coders/rle.c. NOTE: this vulnerability exists because of an incomplete fix for CVE-2017-9144.	imagemagick	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4762
4303	CVE-2017-11335	Medium	High	There is a heap based buffer overflow in tools/tiff2pdf.c of LibTIFF 4.0.8 via a PlanarConfig=Contig image, which causes a more than one hundred bytes out-of-bounds write (related to the ZIPDecode function in tif_zip.c). A crafted input may lead to a remote denial of service attack or an arbitrary code execution attack.	libtiff	Unchanged	8.0.0.21	9.0.0.9	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-4816
4304	CVE-2017-11334	Low	Medium	The address_space_write_continue function in exec.c in QEMU (aka Quick Emulator) allows local guest OS privileged users to cause a denial of service (out-of-bounds access and guest instance crash) by leveraging use of qemu_map_ram_ptr to access guest ram block area.	qemu	Unchanged	Not vulnerable	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5013
4305	CVE-2017-11333	Medium	Medium	The vorbis_analysis_wrote function in lib/ block.c in Xiph.Org libvorbis 1.3.5 allows remote attackers to cause a denial of service (OOM) via a crafted wav file.	libvorbis	Unchanged	8.0.0.30	9.0.0.21	10.17.41.15	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4943

	A	B	C	D	E	F	G	H	I	J	K	L	M
4306	CVE-2017-11331	Medium	Medium	The wav_open function in oggenc/audio.c in Xiph.Org vorbis-tools 1.4.0 allows remote attackers to cause a denial of service (memory allocation error) via a crafted wav file.	vorbis-tools	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5045
4307	CVE-2017-11310	Medium	High	The read_user_chunk_callback function in coders\png.c in ImageMagick 7.0.6-1 Q16 2017-06-21 (beta) has memory leak vulnerabilities via crafted PNG files.	imagemagick	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4855
4308	CVE-2017-11188	HIGH	High	The ReadDPXImage function in coders\dpx.c in ImageMagick 7.0.6-0 has a large loop vulnerability that can cause CPU exhaustion via a crafted DPX file, related to lack of an EOF check.	imagemagick	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4643
4309	CVE-2017-11185	MEDIUM	High	The gmp plugin in strongSwan before 5.6.0 allows remote attackers to cause a denial of service (NULL pointer dereference and daemon crash) via a crafted RSA signature.	strongswan	Unchanged	8.0.0.26	9.0.0.15	10.17.41.6	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3577
4310	CVE-2017-11176	HIGH	Critical	The mq_notify function in the Linux kernel through 4.11.9 does not set the sock pointer to NULL upon entry into the retry logic. During a user-space close of a Netlink socket, it allows attackers to cause a denial of service (use-after-free) or possibly have unspecified other impact.	linux	Unchanged	8.0.0.20	9.0.0.9	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4661
4311	CVE-2017-11171	MEDIUM	Medium	Bad reference counting in the context of accept_ice_connection() in gsm-xsmp-server.c in old versions of gnome-session up until version 2.29.92 allows a local attacker to establish ICE connections to gnome-session with invalid authentication data (an invalid magic cookie). Each failed authentication attempt will leak a file descriptor in gnome-session. When the maximum number of file descriptors is exhausted in the gnome-session process, it will enter an infinite loop trying to communicate without success, consuming 100% of the CPU. The graphical session associated with the gnome-session process will stop working correctly, because communication with gnome-session is no longer possible.	gnome-session	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4670
4312	CVE-2017-11170	MEDIUM	High	The ReadTGAImage function in coders\tga.c in ImageMagick 7.0.5-6 has a memory leak vulnerability that can cause memory exhaustion via invalid colors data in the header of a TGA or VST file.	imagemagick	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4652
4313	CVE-2017-11166	HIGH	Medium	The ReadXWDImage function in coders\xwd.c in ImageMagick 7.0.5-6 has a memory leak vulnerability that can cause memory exhaustion via a crafted length (number of color-map entries) field in the header of an XWD file.	imagemagick	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4667
4314	CVE-2017-11164	HIGH	High	In PCRE 8.41, the OP_KETRMAX feature in the match function in pcre_exec.c allows stack exhaustion (uncontrolled recursion) when processing a crafted regular expression.	pcre	Unchanged	Vulnerable	Vulnerable	Investigate	Investigate	Investigate	Not vulnerable	LIN9-4641
4315	CVE-2017-11147	MEDIUM	Critical	In PHP before 5.6.30 and 7.x before 7.0.15, the PHAR archive handler could be used by attackers supplying malicious archive files to crash the PHP interpreter or potentially disclose information due to a buffer over-read in the phar_parse_pharfile function in ext/phar/phar.c.	php	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4640
4316	CVE-2017-11146			In PHP through 5.6.31, 7.x through 7.0.21, and 7.1.x through 7.1.7, lack of bounds checks in the date extension's timelib_meridian parsing code could be used by attackers able to supply date strings to leak information from the interpreter, related to ext/date/lib/parse_date.c out-of-bounds reads affecting the php_parse_date function. NOTE: this vulnerability exists because of an incomplete fix for CVE-2017-11145.	php	Updated	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4646
4317	CVE-2017-11145	MEDIUM	High	In PHP before 5.6.31, 7.x before 7.0.21, and 7.1.x before 7.1.7, lack of a bounds check in the date extension's timelib_meridian parsing code could be used by attackers able to supply date strings to leak information from the interpreter, related to an ext/date/lib/parse_date.c out-of-bounds read affecting the php_parse_date function.	php	Unchanged	Vulnerable	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4647
4318	CVE-2017-11144	MEDIUM	High	In PHP before 5.6.31, 7.x before 7.0.21, and 7.1.x before 7.1.7, the openssl extension PEM sealing code did not check the return value of the OpenSSL sealing function, which could lead to a crash of the PHP interpreter, related to an interpretation conflict for a negative number in ext/openssl/openssl.c, and an OpenSSL documentation omission.	php	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4664
4319	CVE-2017-11143	MEDIUM	High	In PHP before 5.6.31, an invalid free in the WDDX deserialization of boolean parameters could be used by attackers able to inject XML for deserialization to crash the PHP interpreter, related to an invalid free for an empty boolean element in ext/wddx/wddx.c.	php	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4648
4320	CVE-2017-11142	HIGH	High	In PHP before 5.6.31, 7.x before 7.0.17, and 7.1.x before 7.1.3, remote attackers could cause a CPU consumption denial of service attack by injecting long form variables, related to main/php_variables.c.	php	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4657
4321	CVE-2017-11141	HIGH	Medium	The ReadMATImage function in coders\mat.c in ImageMagick 7.0.5-6 has a memory leak vulnerability that can cause memory exhaustion via a crafted MAT file, related to incorrect ordering of a SetImageExtent call.	imagemagick	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4666
4322	CVE-2017-11126	MEDIUM	Medium	The III_i_stereo function in libmpg123/layer3.c in mpg123 through 1.25.1 allows remote attackers to cause a denial of service (buffer over-read and application crash) via a crafted audio file that is mishandled in the code for the block_type != 2 case, a similar issue to CVE-2017-9870.	mpg123	Unchanged	Won't Fix	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4674
4323	CVE-2017-11113	MEDIUM	High	In ncurses 6.0, there is a NULL Pointer Dereference in the _nc_parse_entry function of tinfo/parse_entry.c. It could lead to a remote denial of service attack if the terminfo library code is used to process untrusted terminfo data.	ncurses	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4651
4324	CVE-2017-11112	MEDIUM	High	In ncurses 6.0, there is an attempted 0xffffffffffffffff access in the append_acs function of tinfo/parse_entry.c. It could lead to a remote denial of service attack if the terminfo library code is used to process untrusted terminfo data.	ncurses	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4676

	A	B	C	D	E	F	G	H	I	J	K	L	M
4325	CVE-2017-11111	MEDIUM	High	In Netwide Assembler (NASM) 2.14rc0, preproc.c allows remote attackers to cause a denial of service (heap-based buffer overflow and application crash) or possibly have unspecified other impact via a crafted file.	nasm	Unchanged	8.0.0.28	9.0.0.19	10.17.41.13	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-3058
4326	CVE-2017-11109	MEDIUM	High	Vim 8.0 allows attackers to cause a denial of service (invalid free) or possibly have unspecified other impact via a crafted source (aka -S) file. NOTE: there might be a limited number of scenarios in which this has security relevance.	vim	Unchanged	Vulnerable	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4678
4327	CVE-2017-11108	MEDIUM	High	tcpdump 4.9.0 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via crafted packet data. The crash occurs in the EXTRACT_16BITS function, called from the stp_print function for the Spanning Tree Protocol.	tcpdump	Unchanged	8.0.0.21	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4659
4328	CVE-2017-11103	Medium	High	Heimdal before 7.4 allows remote attackers to impersonate services with Orpheus' Lyre attacks because it obtains service-principal names in a way that violates the Kerberos 5 protocol specification. In _krb5_extract_ticket() the KDC-REP service name must be obtained from the encrypted version stored in 'enc_part' instead of the unencrypted version stored in 'ticket'. Use of the unencrypted version provides an opportunity for successful server impersonation and other attacks. NOTE: this CVE is only for Heimdal and other products that embed Heimdal code; it does not apply to other instances in which this part of the Kerberos 5 protocol specification is violated.	samba	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5144
4329	CVE-2017-10995	MEDIUM	Medium	The mng_get_long function in coders/png.c in ImageMagick 7.0.6-0 allows remote attackers to cause a denial of service (heap-based buffer over-read and application crash) via a crafted MNG image.	imagemagick	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4654
4330	CVE-2017-10989	HIGH	Critical	The getNodeSize function in ext/rtree/rtree.c in SQLite through 3.19.3, as used in GDAL and other products, mishandles undersized RTree blobs in a crafted database, leading to a heap-based buffer over-read or possibly unspecified other impact.	sqlite	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4639
4331	CVE-2017-10987	Medium	High	An FR-GV-304 issue in FreeRADIUS 3.x before 3.0.15 allows DHCP - Buffer over-read in fr_dhcp_decode_suboptions() and a denial of service.	freeradius	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4808
4332	CVE-2017-10986	Medium	High	An FR-GV-303 issue in FreeRADIUS 3.x before 3.0.15 allows DHCP - Infinite read in dhcp_attr2vp() and a denial of service.	freeradius	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4788
4333	CVE-2017-10985	High	High	An FR-GV-302 issue in FreeRADIUS 3.x before 3.0.15 allows Infinite loop and memory exhaustion with 'concat' attributes and a denial of service.	freeradius	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4827
4334	CVE-2017-10984	High	Critical	An FR-GV-301 issue in FreeRADIUS 3.x before 3.0.15 allows Write overflow in data2vp_wimax() - this allows remote attackers to cause a denial of service (daemon crash) or possibly execute arbitrary code.	freeradius	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4837
4335	CVE-2017-10983	Medium	High	An FR-GV-206 issue in FreeRADIUS 2.x before 2.2.10 and 3.x before 3.0.15 allows DHCP - Read overflow when decoding option 63 and a denial of service.	freeradius	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4797
4336	CVE-2017-10982	Medium	High	An FR-GV-205 issue in FreeRADIUS 2.x before 2.2.10 allows DHCP - Buffer over-read in fr_dhcp_decode_options() and a denial of service.	freeradius	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4779
4337	CVE-2017-10981	Medium	High	An FR-GV-204 issue in FreeRADIUS 2.x before 2.2.10 allows DHCP - Memory leak in fr_dhcp_decode() and a denial of service.	freeradius	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4865
4338	CVE-2017-10980	Medium	High	An FR-GV-203 issue in FreeRADIUS 2.x before 2.2.10 allows DHCP - Memory leak in decode_tlv() and a denial of service.	freeradius	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4866
4339	CVE-2017-10979	High	Critical	An FR-GV-202 issue in FreeRADIUS 2.x before 2.2.10 allows Write overflow in rad_coalesce() - this allows remote attackers to cause a denial of service (daemon crash) or possibly execute arbitrary code.	freeradius	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4804
4340	CVE-2017-10978	Medium	High	An FR-GV-201 issue in FreeRADIUS 2.x before 2.2.10 and 3.x before 3.0.15 allows Read / write overflow in make_secret() and a denial of service.	freeradius	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4853
4341	CVE-2017-10971	MEDIUM	High	In the X.Org X server before 2017-06-19, a user authenticated to an X Session could crash or execute code in the context of the X Server by exploiting a stack overflow in the endianness conversion of X Events.	xorg	Unchanged	8.0.0.20	9.0.0.9	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-4656
4342	CVE-2017-10966	HIGH	Critical	An issue was discovered in Irssi before 1.0.4. While updating the internal nick list, Irssi could incorrectly use the GHashTable interface and free the nick while updating it. This would then result in use-after-free conditions on each access of the hash table.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4653
4343	CVE-2017-10965	HIGH	Critical	An issue was discovered in Irssi before 1.0.4. When receiving messages with invalid time stamps, Irssi would try to dereference a NULL pointer.	irssi	Unchanged	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4650
4344	CVE-2017-10928	MEDIUM	High	In ImageMagick 7.0.6-0, a heap-based buffer over-read in the GetNextToken function in token.c allows remote attackers to obtain sensitive information from process memory or possibly have unspecified other impact via a crafted SVG document that is mishandled in the GetUserSpaceCoordinateValue function in coders/svg.c.	imagemagick	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4668
4345	CVE-2017-10911	MEDIUM	Medium	The make_response function in drivers/block/xen-blkback/blkback.c in the Linux kernel before 4.11.8 allows guest OS users to obtain sensitive information from host OS (or other guest OS) kernel memory by leveraging the copying of uninitialized padding fields in Xen block-interface response structures, aka XSA-216.	linux	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4677
4346	CVE-2017-10810	HIGH	High	Memory leak in the virtio_gpu_object_create function in drivers/gpu/drm/virtio/virtgpu_object.c in the Linux kernel through 4.11.8 allows attackers to cause a denial of service (memory consumption) by triggering object-initialization failures.	linux	Unchanged	Not vulnerable	9.0.0.9	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4638

	A	B	C	D	E	F	G	H	I	J	K	L	M
4347	CVE-2017-10806	Low	Medium	Stack-based buffer overflow in hw/usb/redirect.c in QEMU (aka Quick Emulator) allows local guest OS users to cause a denial of service (QEMU process crash) via vectors related to logging debug messages.	qemu	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5004
4348	CVE-2017-10790	MEDIUM	High	The _asn1_check_identifier function in GNU Libtasn1 through 4.12 causes a NULL pointer dereference and crash when reading crafted input that triggers assignment of a NULL value within an asn1_node structure. It may lead to a remote denial of service attack.	libtasn1	Unchanged	8.0.0.21	9.0.0.10	10.0.0.0	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4679
4349	CVE-2017-10784	HIGH	High	The Basic authentication code in WEBrick library in Ruby before 2.2.8, 2.3.x before 2.3.5, and 2.4.x through 2.4.1 allows remote attackers to inject terminal emulator escape sequences into its log and possibly execute arbitrary commands via a crafted user name.	ruby	Unchanged	8.0.0.23	9.0.0.12	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5454
4350	CVE-2017-10688	Medium	High	In LibTIFF 4.0.8, there is a assertion abort in the TIFFWriteDirectoryTagCheckedLong8Array function in tif_dirwrite.c. A crafted input will lead to a remote denial of service attack.	libtiff	Unchanged	8.0.0.20	9.0.0.9	10.0.0.0	10.18.44.1	Not vulnerable	Not vulnerable	LIN9-4669
4351	CVE-2017-10685	High	Critical	In ncurses 6.0, there is a format string vulnerability in the fmt_entry function. A crafted input will lead to a remote arbitrary code execution attack.	ncurses	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4642
4352	CVE-2017-10684	High	Critical	In ncurses 6.0, there is a stack-based buffer overflow in the fmt_entry function. A crafted input will lead to a remote arbitrary code execution attack.	ncurses	Unchanged	8.0.0.21	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4658
4353	CVE-2017-10683	Medium	High	In mpg123 1.25.0, there is a heap-based buffer over-read in the convert_latin1 function in libmpg123/id3.c. A crafted input will lead to a remote denial of service attack.	mpg123	Unchanged	Won't Fix	9.0.0.19	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4645
4354	CVE-2017-10671	Medium	High	Heap-based Buffer Overflow in the de_dotdot function in libhttpd.c in sthttpd before 2.27.1 allows remote attackers to cause a denial of service (daemon crash) or possibly have unspecified other impact via a crafted filename.	sthttpd	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4672
4355	CVE-2017-10664	Medium	High	qemu-nbd in QEMU (aka Quick Emulator) does not ignore SIGPIPE, which allows remote attackers to cause a denial of service (daemon crash) by disconnecting during a server-to-client reply attempt.	qemu	Unchanged	8.0.0.22	9.0.0.10	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4930
4356	CVE-2017-10663	High	High	The sanity_check_ckpt function in fs/f2fs/super.c in the Linux kernel before 4.12.4 does not validate the blkoff and segno arrays, which allows local users to gain privileges via unspecified vectors.	linux	Unchanged	8.0.0.22	9.0.0.11	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5117
4357	CVE-2017-10662	High	High	The sanity_check_raw_super function in fs/f2fs/super.c in the Linux kernel before 4.11.1 does not validate the segment count, which allows local users to gain privileges via unspecified vectors.	linux	Unchanged	8.0.0.22	9.0.0.11	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5130
4358	CVE-2017-10661	HIGH	High	Race condition in fs/timerfd.c in the Linux kernel before 4.10.15 allows local users to gain privileges or cause a denial of service (list corruption or use-after-free) via simultaneous file-descriptor operations that leverage improper might_cancel queueing.	linux	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5163
4359	CVE-2017-10388	Medium	High	Vulnerability in the Java SE, Java SE Embedded component of Oracle Java SE (subcomponent: Libraries). Supported versions that are affected are Java SE: 6u161, 7u151, 8u144 and 9; Java SE Embedded: 8u144. Difficult to exploit vulnerability allows unauthenticated attacker with network access via Kerberos to compromise Java SE, Java SE Embedded. Successful attacks require human interaction from a person other than the attacker. Successful attacks of this vulnerability can result in takeover of Java SE, Java SE Embedded. Note: Applies to the Java SE Kerberos client. CVSS 3.0 Base Score 7.5 (Confidentiality, Integrity and Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:H/PR:N/UI:R/S:U/C:H/I:H/A:H).	jdk&jre	Unchanged	8.0.0.23	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-8134
4360	CVE-2017-10384	MEDIUM	Medium	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: DDL). Supported versions that are affected are 5.5.57 and earlier 5.6.37 and earlier 5.7.19 and earlier. Easily exploitable vulnerability allows low privileged attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS 3.0 Base Score 6.5 (Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:L/UI:N/S:U/C:N/I:N/A:H).	mysql	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5716
4361	CVE-2017-10379	Medium	Medium	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Client programs). Supported versions that are affected are 5.5.57 and earlier, 5.6.37 and earlier and 5.7.19 and earlier. Easily exploitable vulnerability allows low privileged attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized access to critical data or complete access to all MySQL Server accessible data. CVSS 3.0 Base Score 6.5 (Confidentiality impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:L/UI:N/S:U/C:H/I:N/A:N).	mysql	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5725
4362	CVE-2017-10378	Medium	Medium	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: Optimizer). Supported versions that are affected are 5.5.57 and earlier, 5.6.37 and earlier and 5.7.11 and earlier. Easily exploitable vulnerability allows low privileged attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS 3.0 Base Score 6.5 (Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:L/UI:N/S:U/C:N/I:N/A:H).	mysql	Unchanged	8.0.0.23	9.0.0.12	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5684

4368	CVE-2017-10348	MEDIUM	Medium	Vulnerability in the Java SE, Java SE Embedded component of Oracle Java SE (subcomponent: Libraries). Supported versions that are affected are Java SE: 6u161, 7u151, 8u144 and 9; Java SE Embedded: 8u144. Easily exploitable vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE, Java SE Embedded. Successful attacks of this vulnerability can result in unauthorized ability to cause a partial denial of service (partial DOS) of Java SE, Java SE Embedded. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets, that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability does not apply to Java deployments, typically in servers, that load and run only trusted code (e.g., code installed by an administrator). CVSS 3.0 Base Score 5.3 (Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:N/A:L).	jdk&jre	Unchanged	8.0.0.23	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN8-8101
4369	CVE-2017-10347	MEDIUM	Medium	Vulnerability in the Java SE, JRockit component of Oracle Java SE (subcomponent: Serialization). Supported versions that are affected are Java SE: 6u161, 7u151, 8u144 and 9; Java SE Embedded: 8u144. Easily exploitable vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE, JRockit. Successful attacks of this vulnerability can result in unauthorized ability to cause a partial denial of service (partial DOS) of Java SE, JRockit. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets, that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability does not apply to Java deployments, typically in servers, that load and run only trusted code (e.g., code installed by an administrator). 4397	CVE-2017-10165	Medium	Medium	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: Replication). Supported versions that are affected are 5.7.19 and earlier. Easily exploitable vulnerability allows high privileged attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS 3.0 Base Score 4.9 (Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:H/UI:N/S:U/C:N/I:N/A:H).	mysql	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5681
4398	CVE-2017-10155	Medium	High	Vulnerability in the MySQL Server component of Oracle MySQL (subcomponent: Server: Pluggable Auth). Supported versions that are affected are 5.6.37 and earlier and 5.7.19 and earlier. Easily exploitable vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise MySQL Server. Successful attacks of this vulnerability can result in unauthorized ability to cause a hang or frequently repeatable crash (complete DOS) of MySQL Server. CVSS 3.0 Base Score 7.5 (Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:N/A:H).	mysql	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5722
4399	CVE-2017-10140	MEDIUM	HIGH	Postfix before 2.11.10, 3.0.x before 3.0.10, 3.1.x before 3.1.6, and 3.2.x before 3.2.2 might allow local users to gain privileges by leveraging undocumented functionality in Berkeley DB 2.x and later, related to reading settings from DB_CONFIG in the current directory.	postfix	Unchanged	8.0.0.26	9.0.0.16	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3805
4400	CVE-2017-10135	MEDIUM	Medium	Vulnerability in the Java SE, Java SE Embedded, JRockit component of Oracle Java SE (subcomponent: JCE). Supported versions that are affected are Java SE: 6u151, 7u141 and 8u131; Java SE Embedded: 8u131; JRockit: R28.3.14. Difficult to exploit vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE, Java SE Embedded, JRockit. Successful attacks of this vulnerability can result in unauthorized access to critical data or complete access to all Java SE, Java SE Embedded, JRockit accessible data. Note: This vulnerability can be exploited through sandboxed Java Web Start applications and sandboxed Java applets. It can also be exploited by supplying data to APIs in the specified Component without using sandboxed Java Web Start applications or sandboxed Java applets, such as through a web service. CVSS 3.0 Base Score 5.9 (Confidentiality impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:H/PR:N/UI:N/S:U/C:H/I:N/A:N).	jdk&jre	Unchanged	8.0.0.21	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4984
4401	CVE-2017-10125	MEDIUM	High	Vulnerability in the Java SE component of Oracle Java SE (subcomponent: Deployment). Supported versions that are affected are Java SE: 7u141 and 8u131. Difficult to exploit vulnerability allows physical access to compromise Java SE. While the vulnerability is in Java SE, attacks may significantly impact additional products. Successful attacks of this vulnerability can result in takeover of Java SE. Note: Applies to deployment of Java where the Java Auto Update is enabled. CVSS 3.0 Base Score 7.1 (Confidentiality, Integrity and Availability impacts). 4422	CVE-2017-10067	MEDIUM	High	Vulnerability in the Java SE component of Oracle Java SE (subcomponent: Security). Supported versions that are affected are Java SE: 6u151, 7u141 and 8u131. Difficult to exploit vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE. Successful attacks require human interaction from a person other than the attacker. Successful attacks of this vulnerability can result in takeover of Java SE. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets, that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability does not apply to Java deployments, typically in servers, that load and run only trusted code (e.g., code installed by an administrator). CVSS 3.0 Base Score 7.5 (Confidentiality, Integrity and Availability impacts). CVSS Vector: (CVSS:3.0/AV:N/AC:H/PR:N/UI:R/S:U/C:H/I:H/A:H).	jdk&jre	Unchanged	8.0.0.21	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4993
4423	CVE-2017-10053	MEDIUM	Medium	Vulnerability in the Java SE, Java SE Embedded, JRockit component of Oracle Java SE (subcomponent: 2D). Supported versions that are affected are Java SE: 6u151, 7u141 and 8u131; Java SE Embedded: 8u131; JRockit: R28.3.14. Easily exploitable vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE, Java SE Embedded, JRockit. Successful attacks of this vulnerability can result in unauthorized ability to cause a partial denial of service (partial DOS) of Java SE, Java SE Embedded, JRockit. Note: This vulnerability can be exploited through sandboxed Java Web Start applications and sandboxed Java applets. It can also be exploited by supplying data to APIs in the specified Component without using sandboxed Java Web Start applications or sandboxed Java applets, such as through a web service. 4436	CVE-2017-1000422	MEDIUM	High	Gnome gdk-pixbuf 2.36.8 and older is vulnerable to several integer overflow in the gif_get_lzw function resulting in memory corruption and potential code execution	gdk-pixbuf	Unchanged	8.0.0.25	9.0.0.14	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3053
4437	CVE-2017-1000410	MEDIUM	High	The Linux kernel version 3.3-rc1 and later is affected by a vulnerability lies in the processing of incoming L2CAP commands - ConfigRequest, and ConfigResponse messages. This info leak is a result of uninitialized stack variables that may be returned to an attacker in their uninitialized state. By manipulating the code flows that precede the handling of these configuration messages, an attacker can also gain some control over which data will be held in the uninitialized stack variables. This can allow him to bypass KASLR, and stack canaries protection - as both pointers and stack canaries may be leaked in this manner. Combining this vulnerability (for example) with the previously disclosed RCE vulnerability in L2CAP configuration parsing (CVE-2017-1000251) may allow an attacker to exploit the RCE against kernels which were built with the above mitigations. These are the specifics of this vulnerability: In the function l2cap_parse_conf_rsp and in the function l2cap_parse_conf_req the following variable is declared without initialization: struct l2cap_conf_efs efs; In addition, when parsing input configuration parameters in both of these functions, the switch case for handling EFS elements may skip the memcpy call that will write to the efs variable: ... case L2CAP_CONF_EFS: if (olen == sizeof(efs)) memcpy(&efs, (void *)val, olen); ... The olen in the above if is attacker controlled, and regardless of that if, in both of these functions the efs variable would eventually be added to the outgoing configuration request that is being built: l2cap_add_conf_opt(&ptr, L2CAP_CONF_EFS, sizeof(efs), (unsigned long) &efs); So by sending a configuration request, or response, that contains an L2CAP_CONF_EFS element, but with an element length that is not sizeof(efs) - the memcpy to the uninitialized efs variable can be avoided, and the uninitialized variable would be returned to the attacker (16 bytes).	linux	Unchanged	8.0.0.26	9.0.0.15	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2767
4438	CVE-2017-1000409	MEDIUM	High	The buffer overflow (CVE-2017-1000409) first appeared in glibc 2.5 (released on September 29, 2006) and can be triggered through the LD_LIBRARY_PATH environment variable	glibc	Unchanged	8.0.0.25	9.0.0.15	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3130

4439	CVE-2017-1000408	HIGH	High	The memory leak (CVE-2017-1000408) first appeared in glibc 2.1.1 (released on May 24, 1999) and can be reached and amplified through the LD_HWCAP_MASK environment variable	glibc	Unchanged	8.0.0.25	9.0.0.15	10.17.41.9	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-3129
4440	CVE-2017-1000407	MEDIUM	High	The Linux Kernel 2.6.32 and later are affected by a denial of service, by flooding the diagnostic port 0x80 an exception can be triggered leading to a kernel panic.	linux	Unchanged	8.0.0.25	9.0.0.14	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2747
4441	CVE-2017-1000405	MEDIUM	High	The Linux Kernel versions 2.6.38 through 4.14 have a problematic use of pmd_mkdirty() in the touch_pmd() function inside the THP implementation. touch_pmd() can be reached by get_user_pages(). In such case, the pmd will become dirty. This scenario breaks the new can_follow_write_pmd()'s logic - pmd can become dirty without going through a COW cycle. This bug is not as severe as the original Dirty cow because an ext4 file (or any other regular file) cannot be mapped using THP. Nevertheless, it does allow us to overwrite read-only huge pages. For example, the zero huge page and sealed shmem files can be overwritten (since their mapping can be populated using THP). Note that after the first write page-fault to the zero page, it will be replaced with a new fresh (and zeroed) thp.	linux	Unchanged	8.0.0.24	9.0.0.13	10.17.41.11	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2716

4451	CVE-2017-1000367	MEDIUM	Medium	Todd Miller's sudo version 1.8.20 and earlier is vulnerable to an input validation (embedded spaces) in the get_process_ttyname() function resulting in information disclosure and command execution.	sudo	Unchanged	8.0.0.19	9.0.0.8	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4425
4452	CVE-2017-1000366	HIGH	High	glibc contains a vulnerability that allows specially crafted LD_LIBRARY_PATH values to manipulate the heap/stack, causing them to alias, potentially resulting in arbitrary code execution. Please note that additional hardening changes have been made to glibc to prevent manipulation of stack and heap memory but these issues are not directly exploitable, as such they have not been given a CVE. This affects glibc 2.25 and earlier.	glibc	Unchanged	8.0.0.19	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4441

	A	B	C	D	E	F	G	H	I	J	K	L	M
4453	CVE-2017-1000365	HIGH	High	The Linux Kernel imposes a size restriction on the arguments and environmental strings passed through RLIMIT_STACK/RLIM_INFINITY (1/4 of the size), but does not take the argument and environment pointers into account, which allows attackers to bypass this limitation. This affects Linux Kernel versions 4.11.5 and earlier. It appears that this feature was introduced in the Linux Kernel version 2.6.23.	linux	Unchanged	8.0.0.21	9.0.0.10	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-4440
4454	CVE-2017-1000364	MEDIUM	High	An issue was discovered in the size of the stack guard page on Linux, specifically a 4k stack guard page is not sufficiently large and can be "jumped" over (the stack guard page is bypassed), this affects Linux Kernel versions 4.11.5 and earlier (the stackguard page was introduced in 2010).	linux	Unchanged	8.0.0.19	Vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4439
4455	CVE-2017-1000363	HIGH	High	Linux drivers/char/lp.c Out-of-Bounds Write. Due to a missing bounds check, and the fact that parport_ptr integer is static, a 'secure boot' kernel command line adversary (can happen due to bootloader vulns, e.g. Google Nexus 6's CVE-2016-10277, where due to a vulnerability the adversary has partial control over the command line) can overflow the parport_nr array in the following code, by appending many (>LP_NO) 'lp=none' arguments to the command line.	linux	Unchanged	8.0.0.20	9.0.0.9	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-4861
4456	CVE-2017-1000257	MEDIUM	Critical	An IMAP FETCH response line indicates the size of the returned data, in number of bytes. When that response says the data is zero bytes, libcurl would pass on that (non-existing) data with a pointer and the size (zero) to the deliver-data function. libcurl's deliver-data function treats zero as a magic number and invokes strlen() on the data to figure out the length. The strlen() is called on a heap based buffer that might not be zero terminated so libcurl might read beyond the end of it into whatever memory lies after (or just crash) and then deliver that to the application as if it was actually downloaded.	curl	Unchanged	8.0.0.24	9.0.0.13	10.17.41.3	10.18.44.1	Not vulnerable	Not vulnerable	LIN10-2613
4457	CVE-2017-1000256	MEDIUM	High	libvirt version 2.3.0 and later is vulnerable to a bad default configuration of verify-peer=no passed to QEMU by libvirt resulting in a failure to validate SSL/TLS certificates by default.	libvirt	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2492
4458	CVE-2017-1000255	MEDIUM	Medium	On Linux running on PowerPC hardware (Power8 or later) a user process can craft a signal frame and then do a sigreturn so that the kernel will take an exception (interrupt), and use the r1 value *from the signal frame* as the kernel stack pointer. As part of the exception entry the content of the signal frame is written to the kernel stack, allowing an attacker to overwrite arbitrary locations with arbitrary values. The exception handling does produce an oops, and a panic if panic_on_oops=1, but only after kernel memory has been over written. This flaw was introduced in commit: 5d176f751ee3 (powerpc: tm: Enable transactional memory (TM) lazily for userspace) which was merged upstream into v4.9-rc1. Please note that kernels built with CONFIG_PPC_TRANSACTIONAL_MEM =n are not vulnerable.	linux	Unchanged	Not vulnerable	Not vulnerable	10.17.41.4	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2505
4459	CVE-2017-1000254	MEDIUM	High	libcurl may read outside of a heap allocated buffer when doing FTP. When libcurl connects to an FTP server and successfully logs in (anonymous or not), it asks the server for the current directory with the `PWD` command. The server then responds with a 257 response containing the path, inside double quotes. The returned path name is then kept by libcurl for subsequent uses. Due to a flaw in the string parser for this directory name, a directory name passed like this but without a closing double quote would lead to libcurl not adding a trailing NUL byte to the buffer holding the name. When libcurl would then later access the string, it could read beyond the allocated heap buffer and crash or wrongly access data beyond the buffer, thinking it was part of the path. A malicious server could abuse this fact and effectively prevent libcurl-based clients to work with it - the PWD command is always issued on new FTP connections and the mistake has a high chance of causing a segfault. The simple fact that this has issue remained undiscovered for this long could suggest that malformed PWD responses are rare in benign servers. We are not aware of any exploit of this flaw. This bug was introduced in commit [415d2e7cb7] (https://github.com/curl/curl/commit/415d2e7cb7), March 2005. In libcurl version 7.56.0, the parser always zero terminates the string but also rejects it if not terminated properly with a final double quote.	curl	Unchanged	8.0.0.23	9.0.0.12	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5528
4460	CVE-2017-1000253	HIGH	High	Linux distributions that have not patched their long-term kernels with https://git.kernel.org/linus/a87938b2e246b81b4fb713edb371a9fa3c5c3c86 (committed on April 14, 2015). This kernel vulnerability was fixed in April 2015 by commit a87938b2e246b81b4fb713edb371a9fa3c5c3c86 (backported to Linux 3.10.77 in May 2015), but it was not recognized as a security threat. With CONFIG_ARCH_BINFMT_ELF_RANDOMIZE_PIE enabled, and a normal top-down address allocation strategy, load_elf_binary() will attempt to map a PIE binary into an address range immediately below mm->mmap_base. Unfortunately, load_elf_binary() does not take account of the need to allocate sufficient space for the entire binary which means that, while the first PT_LOAD segment is mapped below mm->mmap_base, the subsequent PT_LOAD segment(s) end up being mapped above mm->mmap_base into the are that is supposed to be the gap between the stack and the binary.	linux	Unchanged	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN9-5555

4465	CVE-2017-1000246	MEDIUM	Medium	Python package pysaml2 version 4.4.0 and earlier reuses the initialization vector across encryptions in the IDP server, resulting in weak encryption of data.	python-pysaml2	Unchanged	Not vulnerable	Won't Fix	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2636
4466	CVE-2017-1000159	MEDIUM	High	Command injection in evince 3.24.8 via filename when printing to PDF	evince	Unchanged	Won't Fix	9.0.0.14	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN10-2627
4467	CVE-2017-1000158	HIGH	Critical	CPython (aka Python) up to 2.7.13 is vulnerable to an integer overflow in the PyString_DecodeEscape function in stringobject.c, resulting in heap-based buffer overflow (and possible arbitrary code execution)	python	Unchanged	8.0.0.25	9.0.0.14	10.17.41.5	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2609
4468	CVE-2017-1000122	MEDIUM	Medium	The UNIX IPC layer in WebKit, including WebKitGTK+ prior to 2.16.3, does not properly validate certain message metadata, allowing a compromised secondary process to cause a denial of service (release assertion) of the UI process. This vulnerability does not affect Apple products.	webkit	Unchanged	8.0.0.24	9.0.0.13	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2501
4469	CVE-2017-1000121	HIGH	Critical	The UNIX IPC layer in WebKit, including WebKitGTK+ prior to 2.16.3, does not properly validate message size metadata, allowing a compromised secondary process to trigger an integer overflow and subsequent buffer overflow in the UI process. This vulnerability does not affect Apple products.	webkit	Unchanged	8.0.0.24	9.0.0.13	Not vulnerable	Not vulnerable	Not vulnerable	Not vulnerable	LIN10-2509
4470	CVE-2017-1000116	HIGH	Critical	Mercurial prior to 4.3 did not adequately sanitize hostnames passed to ssh, leading to possible shell-injection attacks.	mercurial	Unchanged	8.0.0.23	9.0.0.12	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5531
4471	CVE-2017-1000115	MEDIUM	High	Mercurial prior to version 4.3 is vulnerable to a missing symlink check that can malicious repositories to modify files outside the repository	mercurial	Unchanged	8.0.0.23	9.0.0.12	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5595
4472	CVE-2017-1000112	MEDIUM	High	A memory corruption issue was found in the Linux kernel. When building a UFO packet with MSG_MORE __ip_append_data() calls ip_ufo_append_data() to append. However in between two send() calls, the append path can be switched from UFO to non-UFO one, which leads to a memory corruption. In case UFO packet lengths exceeds MTU, copy = maxfraglen ? skb->len Becomes negative on the non-UFO path and the branch to allocate new skb is taken. This triggers fragmentation and computation of fraggap = skb_prev->len - maxfraglen. Fraggap can exceed MTU, causing copy = datalen - transhdrlen - fraggap to become negative. Subsequently skb_copy_and_csum_bits() writes out-of-bounds.	linux	Unchanged	8.0.0.21	9.0.0.10	Won't Fix	Won't Fix	Won't Fix	Won't Fix	LIN9-5109
